Thread: [USB Add Space and Memory](#)

Crab - March 2, 2012, 2:04 pm

I bought a new usb that has 2gb space in it. Is there any trick to make it have 10gb memory or space? thanks

Vere? - March 2, 2012, 2:05 pm

You can't make it gain memory, it has to do with the way it is built. You can though, make it lose space.

Windows 7 was my idea - March 2, 2012, 2:06 pm

Lol im sorry that is a silly question. You buy 2gb and thats what you'll get man. If you want more save up a bit more money and get a bigger USB drive.

Crab - March 2, 2012, 2:10 pm

Lol thought there was a trick or a program that adds diskpace. i guess i was wrong

You might be thinking of turboboost(think thats what its called) which its supposed to add virtual memory via your usb or sdcard etc. but in my opinion its hardly noticeable.

It actually just stores your cash memory files on that turbo thing, it doesn't expand your actual RAM memory...

Well i know it doesnt expand your real memory i know that. i didnt say that i said virtual memory which is different but i was just guessing in my post fot the most part it concerns the page file doesnt it?

synsic - March 3, 2012, 5:56 pm

think you guys mean Ready Boost?? and yea, it's a joke. Nothing will beat physical RAM speeds.

Blud™ - March 3, 2012, 5:57 pm

Yeah you were wrong you should close this thread.
