Thread: [how do u bypass a locked windows 7 computer u forgot password for?](#)

**BlackHat8496** - March 3, 2012, 3:12 pm

well my grandma computer she died only one knew password and we dont know how to get into her computer how do i bypass the winodow 7 password protection

**piracki** - March 3, 2012, 3:13 pm

Good luck : <http://ophcrack.sourceforge.net/>

**Xelias** - March 3, 2012, 3:14 pm

You don't, that would defeat the purpose of a password. Your option is pretty much reformatting the PC. Sorry.

Wouldn't this require access to an OS...?

Hirens disk has password manager, that just lets you delete the local password SAM hash, allowing you access with no password.

Enjoy

Incorrect Sir, you can boot to a Linux Kernal that will allow modification of the SAM file which holds the password hashes. It's a nifty trick that works on 99% of the time.

Than I stand corrected; but I was mainly going off of the fact he has windows; and it has a password.

Aren't you talking about "Network Password Recovery 1.32"tool in the CD, isn't it?

**Unrep** - March 3, 2012, 3:21 pm

Just take the hard drive out and put it into another computer. You will be able to access all the files that way.

**Xelias** - March 3, 2012, 3:22 pm

In my opinion, it would be more respectful to your deceased grandmother; if you didn't try to break into her personal (>.>) computer. If she legit gave it to you that is one thing, but if not that is pretty much the same thing as grave robbing.

What would be on an elderly (\*cough\* maybe not \*cough) woman's computer that you want to access anyway?

Did you ever think perhaps they were re-purposing the computer? Or wanted some of the photos off the computer to remember her by? This is not an uncommon situation.

I stated the option of her giving it to him... If she didn't, regardless of his motives, it is still screwed up to dig through a dead woman's property.

hmm heres a few links to recover passwords or just if you want to hack a computer

not free (but looks quite good): <http://www.passwordresetter.com/?hop=db6aedf702>

free (but never used it): <http://www.fiberdownload.com/Download/20686/Kon-Boot>

free (but not as legit): <http://www.loginrecovery.com/>

for all of these you will need a cd, a computer (locked one), a computer(not locked that can burn cd's as well.)

hope i helped :D

I would recommend burning a CD with Trinity Rescue Kit. It's a great password recovery/resetting tool.

I'm appalled by the audacity you've displayed, a total stranger imposing your vulgar interpretation of morality on a family mourning the loss of a matriarch, when you lack any factual information to substantiate your accusation of unethical behavior. Such disparaging remarks are in correlation with intelligence and maturity. ?

Tolerance is a very dull and boring virtue, but it is essential to the completeness of character, which allows us to endure all the unpleasantness that exists in our diverse culture.

**ImYourDad** - March 24, 2012, 8:00 pm

Try starting the computer in safe mode(tap F8 as it turns on) then login to the administrator account. If it's your grandma's computer then I doubt she'll have a password for it. Then try changing the password to her account off of it.

Hirens Boot have great programs ..

Too have some Password Blankers ... :))

**Bartuc** - April 18, 2012, 7:09 am

You could simply use Kon-Boot I have had this work on 32bit but, no luck on 64bit.
