Thread: [Are there any search engines that let you search by raw html?](#)

cheatson - March 4, 2012, 3:40 pm

Google DID have a project on the go (now discontinued), and I saw a few other crappy ones, so wondered if anyone had come accross anything decent already?

For clarification, im talking about a web crawler that allows the cache of the source to be searchable, not just the content.

Hm there might be some command line based ones. Cant think of any off hand tho sorry bud

rand0 - March 4, 2012, 4:41 pm

I haven't really seen any good ones :/ This would totally revolutionise how I hack. Life would be so easy, but alas. I have also been looking for something along these lines, but instead I usually find a juicy looking target and then just use something like webshag to peruse available source. Actually, HTTrack works fairly well :)

I would have expected a well known one by now, I mean surely there are widereaching uses for it...

Well I feel that people with legitimate purposes could use something like firebug or inspect element with control+f on their own sites. Or if someone has a web developement issue, they can google the issue by keyword. Or maybe my mind is just so used to thinking in terms of security that I can think of no legitimate uses :/

Yeah pretty much agreed I guess. Still, would be nice ?

Pillows - March 4, 2012, 5:15 pm

If this really existed google would need a bigger budget for their security team to giveaway.

Definitely. Also, I found xss on the site where you can DL httrack...

[xss here](#)

EDIT: I fixed the link to the xss

cheatson - March 4, 2012, 5:58 pm

Im pretty sure I have something big XSS wise, but really need to be able to find the offending js in other sites which is not indicated in site content. I WISH there was a way- ill keep ing this from time to time in case someone comes across it who is like "yeah man, I know exactly what you mean, there is this site, its awesome, and here is the direct link to said awesome site, enjoy!". @__@

btw, nice find mate.

rand0 - March 5, 2012, 8:35 am

Heheh. I just get curious sometimes. I usually try at least a few times to get xss on the sites I visit. Nice mental exercise.
