Challenge has two difficulties:

Easy and Medium

Target: <http://www.pcez.co.uk>

Goal:

For Easy: Get all databases

For Medium: Get the admin username and pass

Proof:

Admin login : <http://screensnapr.com/v/nYUoh9.jpg>

Users: <http://screensnapr.com/v/hsZUES.jpg>

Good luck

Solvers:

1. GrickoTheNoob

and so on, and so on...

That's the easiest part if I were to say.

You did get the info using

Code or 1 group by concat_ws(0x3a,version(),database(),user(),floor(rand(0)*2)) having min(0) or 1
That's not the challenge.

Get the names of the databases and I'll add you to the solvers list

Control your feelings and stop being a sissy ???

Added you to the solvers list.

Next time, read the instructions rather than solving like a blind person

any chance you pm me the solution? ?

!!!! - March 8, 2012, 10:08 am

Hi!

I tried the challenge and found the number of columns with the "String based SQLi" technique but when I use the "Union select" command, it gives 403:Forbidden error!

May I please get the solution to this step?

Thnx! :)

I've tried to solve this. I'm not totally new to this, I've tried several methods. All ended in vain. Can Anyone Give me a hint or the syntax? And no I'm not stuck on WAF bypassing. I've also followed ALL -DownFall's guides. Need help.

Can you Pm me
how you did it ?

andmuchmore - May 16, 2018, 11:04 pm

I am not sure what is more impressive.. You bumping a 6 year old post and expecting an answer or the site that was posted as a challenge is still vuln....

haha I just noticed the date of this thread

TheRealStephen_Curry - May 26, 2018, 2:20 pm

This was easy, I found a cat parameter in which I was able to inject SQL code into. Simple enough but that's just the injection point.
