Thread: [Anti Sandboxie! - Help please.](#)

maches - March 7, 2012, 8:03 am

Hello,

Anyone have working and 100% BYPASS Anti sandboxie source code for delphi?

I tried it :

```
Function AntiNormanSandbox: Boolean;  
var  
  Username: PChar;  
  UsernameSize: cardinal;  
begin  
  Result := False;  
  GetMem(Username, 64);  
  UsernameSize := 64;  
  GetUserName(Username, UsernameSize);  
  if Username = 'CurrentUser' then Result := True;  
end;
```

but it's not working for me and still sandbox of Avast is alarmed :(

Could someone help me?

How is that function supposed to detect sandboxie? it doesn't really do anything...

Check if the title of your window contains "#" and if true then you're in sandbox...

Maybe that's not the best way to do it but it gets the job done.

Also, advice from me, take it or leave it (no offence) but i would not use anti's at all, they raise detection and are pretty much useless...

COBM007 - March 7, 2012, 2:55 pm

Sandboxie loads a dll called Sbiedll.dll in your process; just do a
GetModuleHandle(pChar('Sbiedll.dll')); and you'll be fine.

electron91 - March 25, 2012, 9:24 am

```
function Sandboxie: boolean;  
var  
    hMod:THandle;  
begin  
    Result := False;  
    hMod:= GetModuleHandle(pchar('Sbiedll.dll'));  
    if hMod <> 0 then Result := True;  
end;
```

Even that isn't 100% anti-sandboxie, as you can change the window title in it's options.

djtoto - September 24, 2012, 9:00 am

```
if FindWindowA('SandboxieControlWndClassL',nil) <> 0 then  
    ExitProcess( 0 );
```

100% working ?

David F. - September 24, 2012, 10:31 pm

This topic is a big mess all together (main post).

You are using a normansandbox code, with a topic title about sandboxie (which is the name of an app) and at the end of the post you talk about avast sandbox.

Maybe I am getting crazy, I don't know, but you have no idea of what you talking about or doing.

GodOfCode - September 28, 2012, 7:31 pm

God you have no idea what your talking about. Learn 2 code.

zizzo81 - January 18, 2013, 4:42 am

```
function Sandboxie: boolean;  
var  
    hMod:THandle;  
begin  
    Result := False;  
    hMod:= GetModuleHandle(pchar('Sbiedll.dll'));  
    if hMod <> 0 then Result := True;
```

```
end;
```

simply becomes

```
function Sandboxie: boolean;  
begin  
  Result := GetModuleHandle(pchar('SbieDll.dll')) > 0;  
end;
```
