Thread: [\[VB.net\]Anti-Virus!!!!!!! \(With Part of Code!\)](#)

SIM-297877 - January 10, 2010, 11:30 am

Well After about 8hrs and over 5000 lines of code i made a anti-virus, its called xcvPro Anti-Virus and it scans your pc for for the virus then shows you what it is in the box... i will be updating it soon, ill add a bigger database and add a auto scan to it, ummm i posted a small part of the code i used in [HERE](#)

and i gave a small part of it with the program in the read me file.

This was hard to make so i made it so now one can tack the full code, BUT i did give you part of the code so you can make one... I also put some useful INFO in there like "What is a Virus?" and more, this is beta so there are probably lots of bugs but none that will heart you or your computer so it ok.

If you find any Bugs, Problems Please PM me or Post here, so that i can fix them in the next version.I will be adding a Auto Updater to the next one so that you dont have to keep coming back to see if there are updates.

The xcvProVirus.bat file is for you to test the Anti-Virus, move the .bat to you C: hdd and run the scan, you should be able to delete it using the anti-virus. If you dont wont to test it with that just delete it and use the Anti-Virus.

Ok, The Download/Screen_Shot/Video/and Scan:

Gorgon825 - January 10, 2010, 11:32 am

its not AVG but good to know some people would take the time

Deathader - January 10, 2010, 11:35 am

This is the messiest virus scanner i've ever seen. It's just a bunch of if's, one for each definition in your "database". Why aren't you loading a file, and looping through the definitions?!

And yes, I killed your smartassembly ;)

Romeo. - January 10, 2010, 11:40 am

It gets MD5, scan it in a database, and post result ?
You posted the source ?

TiberianWolf - January 10, 2010, 11:42 am

good job.

But does it scan whole pc or there is a option to set it up, or can it scan specified file?

Awesome dude ??
?

SIM-297877 - January 10, 2010, 11:51 am

(Jan 10, 2010 12:42 PM)TiberianWolf Wrote: [\[CITE\]](#) good job.

Awesome dude ??
?

No, im adding that in my next version tho.

Deathader - January 10, 2010, 11:54 am

What is the password, lol

SIM-297877 - January 10, 2010, 11:56 am

its in the video, xcvPro

TiberianWolf - January 10, 2010, 12:00 pm

(Jan 10, 2010 12:51 PM)acer5515 Wrote: [\[CITE\]](#) No, im adding that in my next version tho.

And better GUI, ROck And Roll dude, making AV so sweet. Good luck.

SIM-297877 - January 10, 2010, 12:12 pm

ya, am going to update it a lot im working on a GUI now, its the virus database thats hard the rest is simple...

just about 4000 lines of code is the database and virus delete code... its a pain.

Entrepreneur - January 10, 2010, 12:15 pm

I am making one of these, hopefully it will be finished this month, lots more features aswell.

SIM-297877 - January 10, 2010, 12:18 pm

cool ill try it._____

Vorfin - January 10, 2010, 12:32 pm

I was going to make one, but couldn't find any good databases lol

Deathader - January 10, 2010, 1:18 pm

I've updated my post on the first page.

SIM-297877 - January 10, 2010, 1:25 pm

I dont now how to do that, i have only been vb.net for about 3 mouths.

Riverthief - January 10, 2010, 9:56 pm

Reminds me a lot of the AV source & binaries posted on LC.

Bitcoin Life - January 16, 2010, 6:04 pm

Pretty cool dude. Try getting less lines of code tho xD

mrnapolean1 - January 17, 2010, 6:54 pm

looks good

whats the name of the song in your video?

SIM-297877 - January 17, 2010, 7:11 pm

Song: 21 Guns By. Green Day

mrnapolean1 - January 17, 2010, 7:41 pm

(Jan 17, 2010 08:11 PM)acer5515 Wrote: [\[CITE\]](#) Song: 21 Guns By. Green Day

Thank you?

memesbro - January 28, 2010, 7:54 pm

Has anybody else noticed that 4000 lines of code is total bullshit right?

```
if File.Exists("C:\virus.bat") then
```

```
File.Delete("C:\virus.bat")
```

```
Elseif File.Exists("C:\virus2.bat") then
```

```
File.Delete("C:\virus2.bat")
```

```
End If
```

FAIL

Dark Molecule - January 28, 2010, 10:00 pm

(Jan 28, 2010 08:54 PM)Chity Snipa Wrote: [\[CITE\]](#) Has anybody else noticed that 4000 lines of code is total bullshit right?

File.Delete("C:\virus.bat")
Elseif File.Exists("C:\virus2.bat") then
File.Delete("C:\virus2.bat")
End If
```

FAIL

welll it could be true if he did write the code like that then who knows he coulda done tht 4000 times lol ?

Ruskiy the Fox - February 1, 2010, 1:44 am

Did you create your own database or leech?

bulli30 - March 26, 2010, 7:54 am

The code is not from you
The code is from youtube

I have show a video on youtube "how to" make anti virus

Numair - March 26, 2010, 8:15 am

If you make it like professional i will definitely use it.

DarkOne1 - March 26, 2010, 10:19 am

(Feb 1, 2010 02:44 AM)Ruskiy the Fox Wrote: [\[CITE\]](#) Did you create your own database or leech? You call that a database? He uses a bunch of Elself to check if a certain file exists on different places. Like :

```
File.Exists("C:\virus.bat") then
File.Delete("C:\virus.bat")
```

Matt39 - April 18, 2010, 9:56 am

Whats pass he removed Vid???

MaxPain_ ^ - June 11, 2010, 8:34 am

just dim the virus....add me msn: toni_lol@msn.com i working to antivirus i have the code but i want some fixes :S ..and little design :)

Ralanar - June 11, 2010, 1:03 pm

Whats the password? he has removed the video

Rue - June 11, 2010, 1:35 pm

This is the biggest piece of shit software i have ever seen. How can you say that you have a 'database' when all it is is just if statements to file paths.... ARE YOU FUCKING KIDDING ME?

You have NO database, just IF statements.... Come the fuck on...

```
Code If File.Exists("C:\Program Files\Windows\Fonts\greeks__.ttf") Then
Me.ListBox1.Items.Add("Backdoor Bot")
End If
```

```
If File.Exists("C:\Program Files\Windows\Fonts\isocp2__.ttf") Then
    Me.ListBox1.Items.Add("Backdoor Bot")
End If
If File.Exists("C:\Program Files\Windows\Fonts\isocp3__.ttf") Then
    Me.ListBox1.Items.Add("Backdoor Bot")
End If
```

LOL, you don't even use definitions, you're a horrible coder.
Learn to program before you release something.

Apple - June 11, 2010, 1:43 pm

I made an antivirus in under 400 lines of code a while ago.

epiphoneultra - June 11, 2010, 4:51 pm

might as well be:

```
Code void DetectViruses()
{
    foreach (string file in System.IO.Directory.GetFiles("C:\\", "*.*",
System.IO.SearchOption.AllDirectories))
    {
        listBox1.Items.Add("Virus: " + file.Substring(file.LastIndexOf("\\") + 1) + " Found at: " + file);
        try
        {
            System.Diagnostics.Process[] pList =
System.Diagnostics.Process.GetProcessesByName(file.Substring(file.LastIndexOf("\\") + 1));
            foreach (System.Diagnostics.Process p in pList)
            {
                if (p.MainModule.FileName == file)
                {
                    p.Kill();
                }
            }
            System.IO.File.Delete(file);
        }
        catch { MessageBox.Show("To Shitty To Delete Files Running under System or Administrative
Priviledges!!!"); }
    }
    MessageBox.Show("VirusBuster has finished deleting all the viruses on your computer. Enjoy
this simpler method to get rid of viruses!");
    }It detects more viruses and uses less space than his method!!!! It also has a lot of false positives
too. I haven't removed the bug that doesn't allow it to delete System files yet. I'm thinking about
doing it in the next release!!! (Sorry it isn't in vb, I like c# better and face it, it makes for less
characters of code!!!)
```

conviction - July 25, 2010, 3:21 pm

hey man where did you find the list of viruses.. like to make the av scan for them where did you find all the names and directories?

and ofc he doesn't have a database but obviously he did a lot of work in re writing these lines of codes so give him some slack lol.. (not saying I could do better?)

and the guy a little above, you said he doesn't have a database just if statements, how do you make a database and what's it suppose to do or make different?

Neroxan - July 25, 2010, 4:19 pm

If it dosent find this then its the most un-efficient A/v ever....

http://www.eicar.org/anti_virus_test_file.htm

tel niasa - August 28, 2010, 8:03 am

(Jan 10, 2010 01:12 PM)acer5515 Wrote: [\[CITE\]](#) ya, am going to update it a lot im working or a GUI now, its the virus database thats hard the rest is simple...

just about 4000 lines of code is the database and virus delete code... its a pain.

you could scan for possible viruses and then use some sort of script to be more certain and heal the virus

Joler1302 - August 28, 2010, 8:13 am

Signatures, MD5's are outdated in AV's, or atleast its old XD They now use detection engines analyzing patterns on specific exes so if its named as svchost, it will detected if its fake :)

Detection engines FTW! :D

Toxic Asshole - August 28, 2010, 8:25 am

Was easy to unpack simple tho very very very simple there was a source just like this on youtube.

ubbelol - August 28, 2010, 8:30 am

(Aug 28, 2010 08:25 AM)Toxic Asshole #52 Wrote: [\[CITE\]](#) Was easy to unpack simple tho very very very simple there was a source just like this on youtube.

Unpack? It's not even protected and doesn't he the give out the source? lol

Aidejonas - August 28, 2010, 10:53 am

You need a muuuuch better GUI the orginal one is crappy!

NETio - September 2, 2010, 8:49 am

Wow, nice project but I don't see a practical application.

Get ClamAV, it's open source and GPL, and add your own features. Oh, and I can change one string in a bot and get a new MD5 hash, it's not that hard to bypass :)

unknown123456 - September 2, 2010, 9:48 am

i'd do something like this:

```
Code for each md5 as string in md5list
```

```
if ... = true
```

```
msgbox("malware")
```

```
else
```

```
msgbox("clean")
```

```
end if
```

```
next
```

Kyuubi - September 2, 2010, 10:19 am

I'd still prefer using a paid antivirus, but this is pretty cool. Good Job.

narenbca - December 13, 2010, 10:07 pm

password pls..?

mariog95 - January 19, 2012, 3:16 pm

megaupload closed you may upload to another host? thanks.

Alvinchan - *July 12, 2014, 10:18 am*

Thank you sir for the source antivirus

Good Job :)

iMeetYourMum - *July 12, 2014, 10:37 am*

The title horrified me.

So, it's a md5 scanner, but.. thank you.
