Thread: [Website shutdown](#)

genisuk - March 10, 2012, 12:27 am

Can anyone help me out to shut down this [website](#)????

It's a Joomla website: for administration user type danielle (pwd: danielle)

thx thx thx

Volim te - March 10, 2012, 12:29 am

Code `http://www.erin-pellet.com/index.php?option=com_content&view=article&id=68' AND ;SHUTDOWN WITH NOWAIT-&Itemid=81&lang=en` Try that

genisuk - March 10, 2012, 1:05 am

Sorry but I am a newbie: is there anyone can enter anonymous in the administration and delete everything??

I know both the user and the pwd:

[Here](#)

user: danielle

pwd: danielle

SK4H - March 10, 2012, 3:12 am

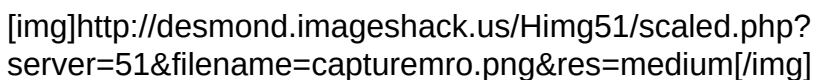

Code user: danielle

pwd: danielle

Isn't the right login my son, and since Joomla isn't an easy thing to hack

You can always try to DDoS the DNS ;]

Klean - March 10, 2012, 4:08 am

I'm Just Used Slowloris Attacks ;)

Easy Down :D

Regards Klean

w0rk - March 10, 2012, 4:15 am

Im sure this is the wrong section for this.

Yes :)

Section:Botnet...

Regards Klean

Hello

I have a wish, and I hope someone got the knowledge to help me since I'm not that smart when it comes to hacking.

First of all, thank you owner of this forum. It's an easy template and everything is in order.

I would like to have this site, www.nxtgn.org shut down. It would be nice if a DDoS could attack the DNS, so they'll have a lot of work coming up.

I would really appreciate it if a soul out there could help me out!
