Thread: [~~~\[Tutorial\] How to make HIDDEN YouTube videos! Embedded on your site!](#)

tylertylert - March 11, 2012, 2:11 pm

Ok, So You can make a youtube video play on your site, Getting you HIDDEN views, without them Ever knowing! Here's an example:

(Heres one on my domain..) <http://bio-craft.com/?p=63>

```
Code <object width="1" height="1"><param name="movie"
value="http://www.youtube.com/v/LlyJuxjUm1c?version=3&hl=en_US"></param><param
name="allowFullScreen" value="true"></param><param name="allowscriptaccess"
value="always"></param><embed
src="http://www.youtube.com/v/LlyJuxjUm1c?version=3&hl=en_US&autoplay=1"
type="application/x-shockwave-flash" width="1" height="1" allowscriptaccess="always"
allowfullscreen="true"></embed></object>
```

Let's break this down, This is the old embed code, This worked on my site, And it will work for you!

This sets the Object to 1 pixel tall and 1 pixel wide, Invisible!

```
Code <object width="1" height="1">
```

This states the object name and grabs the video.

```
Code <param name="movie"
```

```
value="http://www.youtube.com/v/LlyJuxjUm1c?version=3&hl=en_US"></param>
```

Basic Youtube codes.

```
Code <param name="allowFullScreen" value="true"></param><param name="allowscriptaccess"
value="always"></param>
```

This is where all the magic happens.

```
Code <embed
```

```
src="http://www.youtube.com/v/LlyJuxjUm1c?version=3&hl=en_US&autoplay=1"
type="application/x-shockwave-flash" width="1" height="1" allowscriptaccess="always"
allowfullscreen="true"></embed>
```

From the above,

Now, To make the video autoplay, You need to add at the end of the url:

```
"&autoplay=1"
```

```
Code embed
```

```
src="http://www.youtube.com/v/LlyJuxjUm1c?version=3&hl=en_US&autoplay=1"
```

The height and width from the above embedded code

Needs to be 1,1

```
Code width="1" height="1"
```

Now to close up the object.

```
Code </object>
```

You can do this with any youtube video!

Sorry If this is newbish, Trying to help anyone out.

Here's another one I've made

```
<object width="1" height="1"><param name="movie"
value="http://www.youtube.com/v/cR2XilcGYOo?version=3&hl=en_US"></param><param
name="allowFullScreen" value="true"></param><param name="allowscriptaccess"
```

value="always"></param><embed
src="http://www.youtube.com/v/cR2XilcGYOo?version=3&hl=en_US&autoplay=1"
type="application/x-shockwave-flash" width="1" height="1" allowscriptaccess="always"
allowfullscreen="true"></embed></object>

Looks like a good guide, keep it up!
?

That Means alot :3
ehh, "looks like"
Did you read it D;

I'm not using youtube for anything, so no, I didn't read it.

It does look good, and simple to do, therefore it looks like it's a good guide.

Well, Maybe you want some ambient sounds, or a song on your site, Anyways.

Snoopsy - March 11, 2012, 2:23 pm

Pretty sure I've seen this before, but good non-the-less. What about the volume if you're boosting views though?

Hmm.. I suppose that the user could deal with it, not like they can stop it :3

Hook3r - March 11, 2012, 4:13 pm

Erm, I'm pretty sure autoplay doesn't could views anymore..

YERANUK - March 11, 2012, 5:16 pm

You should rather use the youtube js api.
It allows you to play the video, mute the video..

J4mmy - March 11, 2012, 6:27 pm

The only bad side of this is that if you embed the same video to multiple pages, it will restart the

video each time page is changed. Other than that, I already knew about this methodology but thanks for sharing!

Just to clear things up, I'm not the founder of this, I Just wrote the tut on how to do it in case you wanted music or noises in the background,
