Huge vouch for Banksy.Legit as fuck and has an amazing crypter.Been using it for months.

Versace - *March 13, 2012, 5:52 pm*
Vouch for Banksy !

His crypter is very nice and he's a really good coder.

m3llomatt82 - *March 13, 2012, 6:12 pm*
Banksy, I luv you man, in that platonic sort of way. All that above is true but most of all you are a decent guy. BTW, best investment in a crypter I have ever purchased.

The Milkshake Man - *March 13, 2012, 8:20 pm*
Huge vouch for Banksy, been using the crypter for quite some time and only ever had a few small issues with it, which were promptly dealt with and resolved without a problem.

agcore - *March 13, 2012, 8:50 pm*
has the crypter been updated to the new white theme one or is it still 5.2?

Huge vouch, very well made product, does what it needs to and well. Banksy is great with this project.

EkliooSs - *March 14, 2012, 2:04 am*
vouch for chronic crypter !
this is a nice crypter

orestis - *March 14, 2012, 5:21 am*
I updated the crypter. Now I click the executable and it does nothing:/

UPDATE: Fixed. I had run Chronic.exe yesterday and it was still running in the background. I terminated the proccess and it worked!

Thanks Banksy:)

5.2.4 is not the update. I am still working on it. It's been a busy week for me, I have the OGT's (Ohio Graduation Tests) all week. I'm sorry.
The thing with Virus1x seems to have been a misunderstanding, however, I am still taking the project back 100% into my own hands.

Yes, as banksy said it was a simple miscommunication between my 2 jobs and his constant coding, we lost touch and shit got confusing, however Banksy has asked to take-over the project 100% on his own and I will be stepping down as Support/Sales. Please Contact Banksy regarding anything, If your having issues generating fud's I will still have my license I can try to help but understand I am no longer part of the project. Banksy Is a good coder he will take care of you, I wish him and this project the best of luck and a much longer life here on HF

My dad loves to tell the story about when he was in H.S. He was a C+ student, took the SAT so he could get out of class for a day. A month or two later he was called into the principles office and someone from SAT was there and asked him a bunch of questions, like who did he go with to take the test, and where he sat and stuff. Come to find out he killed the test and outscored everyone in the district. He wasn't even in the college prep classes.

To make a long story longer, MIT called him and told him he was accepted and my dad never even applied. He now says going to college was the biggest mistake he ever made. Go figure. Banksy, I have a feeling you will be able to go to any college you want.

Did you take the Explore? I think the prep tests go Explore/Plan/ACT, and I'm sure they keep them on record. I never got my Plan scores either (through my school); I had to find them online, if I remember correctly.

Well, I hope you did well. Have any post-graduation plans?

Your feelings are understandable. I am sure one way or the other Banksy will make it good. Banksy hasn't been on since the 17th. I wonder what he did to get grounded this long. He hasn't even been on a computer to send us a message. He must be going nuts.

Chronik - *March 27, 2012, 12:03 pm*
He should atleast get on hackforums from a public computer at a library or school or his cellphone...

Cause when he doesn't login for almost a few weeks you start to wonder if he ditched it or not.

I doubt his parents would ground him for bad grades for this long, if they did they are the most strict parents I know but I only complain cause I don't have paypal anymore so this is my last crypter I'll have for awhile.

My parents would ground me for a whole grading period for anything lower than a "C" so it wouldn't

surprise me.

m3llomatt82 - *March 27, 2012, 2:02 pm*
The way I look at it, Banksy was always on this site you could see what he is doing by clicking on his avatar. He loved being on here so I think it is unlikely that he bailed. Second, he didn't gradually disappear. He was on then all at once he stopped, cold turkey is hard with an addiction. This leads me to believe something drastic happened and it would be in this order of probability, the feds, his parents, then burnout. I dunno. Time will tell.

I agree with the guy above, Banksy wouldn't just leave us hangin. Makes you wonder. It feels eerie because at 13 my best friend was killed in his parent's car. It was weird because I noticed he hadn't texted me for a few hours. I found out what happened and after that I kept expecting a text. Just like now, he was always on... now nothing. I hope he is ok.

I also noticed many of the other crypters are suspiciously not working. Maybe a fed round up?

I don't want to get into negative banter so I respectfully disagree. Think about it. Someone in this thread already said they were losing money because Banksy's services were not available. This implies the member might be using The crypter to defraud. If Chronic is used to commit a felony against any FICA insured bank or customer of that bank the FBI has the right to execute a warrant or at the least a subpoena. Banksy has a wealth of information including bank transaction and ip addresses. With that they can easily ferret out the people illegally using a legal product. This is one of many scenarios that could occur.

There have been members arrested and jailed that are HF members because they were doing stupid things. Never overrate yourself and underrate the federales. I could be wrong and full of fecal matter but it is better to be safe than sorry. :)

BTW, I just googled juvenile hacker arrested and I copied the url's of the first, non-redundant selections. One of them was an HF member.

Ok, i'm in no way being mean or horrible just explaining it the way i think it is.;

Yes its possible but i don't think it would happen. If he is a good coder then he would encrypt all this info like passwords and whatnot. I think that he is not responsible for what his clients do with the program anyway.

Thanks :)

Ya there is legitimate reasons for a crypter just like there is legitimate reasons for a RAT. I doubt he got arrested, and plus he's like 16 lol.

I hope you are right, however, the Obama administration has expanded the Patriot Act to justify any reason to oppress the freedom of the net. If it is believed that Banksy knew someone was using his product illegally, as in the case of the member who said he is losing money, would make Banksy a co-conspirator. I doubt if Banksy would be arrested or do any time, however, I am certain he could be persuaded to give up information and it would explain the sudden silence. He was posting almost an average of 5 times a day then nothing. I find it a mystery. I hope he was just having trouble fudding and he gave it up. Sure would appreciate a pm if he is under a new name. He is a really an honest decent guy.

You guys need to stop defending him its been 2 fucking weeks.

m3llomatt82 - *April 3, 2012, 6:19 pm*
I try to think in logical rather than emotional terms. I like Banksy, he has never been vindictive nor pompous. He has gone out of his way to help me. He has always treated people fairly as you can see from his posts, for example refusing to charge for resets. With that said, he had close to ten posts a day. On the 17th, he posted 5 times on various coder threads, then it died. NOTHING SINCE.

I am not defending him but I think it is extremely curious; when somebody establishes a trusted persona they don't just throw it in the trash.

One of his last posts was commenting on the coder of Vcrypt. He said. "I'm good friends with Vysse, and I haven't seen him in a while. Don't know what to tell you guys. :/ " That was on the 13th then Banksy disappears on the 17th. He doesn't realize the same thing is going to happen to him shortly.

Other crypter are failing in the same exact pattern:
1. Noob Crypter https://hackforums.net/showthread.php?tid=2294639&page=12

4. iCrypt https://hackforums.net/showthread.php?tid=1764868&page=166

These are a few.

Sheikh and Saddum look like they have both had some problems but they are awesome coders with good security practices.

I think if you have on of the aforementioned failed crypters, it is time to burn your HD's and take the security off of your WiFi. Better to be paranoid then sorry.

This is Banksy. I am on my laptop (don't have my passwords nor sources and everything on this computer), and my good friend Blazed let me hop on his teamviewer and post this. I am alive first off, lmfao. Second, I will update this as soon as I am ungrounded. Thank you very much m3llomatt82, for not jumping to random conclusions of "Banksy's dead", or the like. I did not get in a car wreck, I have not had any type of injury, I am just grounded. I haven't brought my grades up yet, and that would be why I am still grounded. The quarter just started, and there haven't been many assignments yet, so my grades are still a little low. Once I bring them up, I will get my computer back, and all will be well. Thank you.

the crypter is dead for the moment...
the developper was not online since weeks because of private problems...

for me this sounds like the project is going to die slowly :(
maybe he'll update it one day, at least we all hope so, but for sure it will not happen soon (by soon i mean these days or this month) :(

so the only solution => use other crypter, cause this one does not work now and is not FUD since weeks :(

Setup files sometimes don't work, because they check if they have been tampered with or something.

Protips to keep this FUD. longer: Stop uploading to dropbox (Uses virus total), mediafire (Uses Bitdefender), or any other site where the terms say "Don't upload malicious files" because they all virus scan and submit. Stop spreading on big sites like Youtube or Facebook, because some people are actually smart and will upload your file to virus total and fuck up the FUD.

^ that would work, but there are a few hosts by people on HF you just have to look, I haven't really done anything with these in a while but I know min.us doesn't scan, but I had issues making blackshades download from it's links.

Why not use this one: Blank-HF thread about it is here: Blank-HF Thread The only issue is you can't manage your files, so you have to keep direct links to it saved somewhere on your computer, or reupload everytime.

Banks? - *May 3, 2012, 4:00 am*
What are the exact detections you are getting with 5/37? BitDefender, F-Secure, G Data, and BullGuard (and another one I think) all use the same engine, so it's all really just one detection.

No it does not.

To all customers:

I will be taking a little bit to recode the stub, and how I store the encrypted bytes, and how my stub injects into memory. The detection "Gen:Variant.MSILKrypt.6" does not detect the code; rather, it detects the stored bytes. I am going to be brainstorming/coding over the next few days to try and come up with a new method. Sorry for any inconvenience, but I just want you to know that I was not slacking off during this time. This is honestly the hardest detection I've ever had.

Okay this is what I'm going to do.

I'm going to rewrite the crypter completely. A little bit will be released at a time. After a while, everything will be back up and running completely. In answer to the inevitable question: no you will not have to pay. No customer will ever have to pay twice.

Tomorrow most likely, I will release an update with just the crypter, and startup most likely. After that, I will update a few things at a time.

I'm not going to be using the server. It's rather pointless, and just causes difficulties.

On Fire!

Awesome news Banksy, waiting the Update

Insiqht - *June 11, 2012, 10:53 pm*
ugh when is update coming out, and how is it going to be available for download if server not going to be repaired?

Banks? - *June 12, 2012, 11:24 am*
If you have the old version which needs the server, then please PM me.

Everyone else can just update.

If you're not sure, open it up, and if it says can't connect to server, or doesn't open all the way and let you crypt, then PM me.

Meowth - *June 12, 2012, 11:49 am*
I paid with Autobuy, waiting for your response.

SuperWeedFarmer - *June 12, 2012, 3:59 pm*
thanks for the update but i dont think the start up is working i tested it on my self and checked my start up in msconfig and there so nothing new added.

????DRO3D??? - *June 12, 2012, 4:55 pm*
Got the new update . .thanks make!

Peripheral - *June 12, 2012, 4:56 pm*
Does this work with Insomnia? Let me know please, looking forward to purchase!

SuperWeedFarmer - *June 12, 2012, 5:12 pm*
please fix the startup and re-update it

Please Banksy fix them and re-update the crypter ?

Edit:even if you tried the Rat startup

Banks? - *June 13, 2012, 11:19 am*
Updated to fix the startup.

The icon changer is working fine for me. Make sure you are using a real ico.

"If the file you uploaded is detected as suspicious, VirSCAN will send the file and report off to the antivirus vendors participating in the VirSCAN service to be analysed"

Yea that was smart of you to scan with a service that sends the log and make it more detectable :/

It's not really a sale anymore, it's just the normal price. It's 4/37 with only one detection (same detection across all 4 AV's, but I've honestly never heard about any of them). There are no bugs that I know of.

Yes, in the title it says C# which is dependent on .NET. It really doesn't matter though if you are just looking for a average crypter. This is because the only computers that don't have .NET is like a dinosaur computer most likely. Of course, also if they don't have a windows O.S and you make the file as a .jpg, etc.

Not trying to be a downer, but I don't think this crypter will ever be updated to FUD since he has had no luck for quite some time on trying to fix the detections. It would be nice if he happens to start a new crypter, he gives his old, old members who bought the crypter when it first came out such as me free licenses.

Are you serious? The terms of service said that lifetime was the lifetime of the product, and I have stopped the product. The sad part is you were eligible for paradox.

I have a new method for the crypter, something that has not been seen on the market.

I will be updating a temporary version with no features today most likely to test this method.

No I don't believe it does. I've heard Insomnia is obfuscated upon build, which messes up the crypt. I could give it a try however.

I need $25 for the Scan4You account (that's the monthly fee), as I'm completely broke.

Edit: It's been FUD for 18 days now. ?

Edit 2: Holy shit! The crypter has officially been up for over a year!!

Use the built in scanner then.

It's currently detected by Avira, sorting it out now.

Banks? - *July 30, 2012, 12:41 am*
Big news.

Chronic is moving to .Net Seal 2. I've been slaving over this for hours doing my best to make this an automated process of easily transferring your licenses over.

All you have to do is open up the crypter, and it should update.
The update is not the crypter, but an application to grab your new serial and download link.

From there, you just need to download the new crypter, and register your account.
Once your account is registered and verified, you will be prompted to login.
Once you login, there will be an option to redeem a code. This is where you put in the new serial.

That's it, and you can keep using the crypter.

You need 2.0 to run it. When installing frameworks it only installs one of them not all of them.

When you click that just close out of the program and reopen it. When it asks for your serial, look for it in the .txt document that was created in the same location that your crypter is located in.

This has been a known problem with cybergate for a while. The problem is in how CyberGate injects, and even if you turn off injection, it still injects but using it's own name. There's nothing I can do really.

By server, I mean the server application which the crypter connects to upon load. You might not notice it because it connects in the background, and doesn't send any feedback to the form about what's going on. ?

It was FUD from July 3rd to today, when it got detected by ESET and Dr. Web. I got ESET off and I am working on Dr. Web.

See the problem with your theory is that I know how to code.

Yes, it should be. You can use assembly, as long as it's not something that antiviruses would detect (such as using another antivirus' assembly).

For the exact reason that the crypter has been running for over a year. I can code, unlike most of this forum.

Update released fixing multiple bugs, as well as (I believe) fixing the issues with darkcomet and blackshades. The problems weren't occuring on my side though, so I couldn't test them.

Can anyone who was having issues please confirm this?

Hi Banksy,

I have a suggestion:

Can you code a button to signal/report unfud?

User just need to enter scan4you/element scanner url

then he'll click on send and you will receive a mail/message.

"Just as x number of unfud user reports then the crypter will update with precoded fud stub's"

Edit:

"will update with precoded fud stub's" mean crypter will be automatically updated with precoded fud stub's

Other suggestion:

Crypting/Compatibility Problem report button?

Well in order to do that I would have to predict what antiviruses are going to detect what, and that's not exactly easy.

kai59 - *August 6, 2012, 2:42 pm*

You can make an average (scantime x) ...) of antivirus which detect as quickly the stub?

You can define the probability (with statistics etc...) of antivirus that will detect as quickly the stub?

Sorry for my poor English :(

Say you have like 3 detections right...

You cant just go in your source and say, o i see the

storage method is detected.

You have to break down your coding in a timely manner.

And re-code what ever is detected.

and keep scanning to see what is what.

Atleast that's what i do to find out what is detected and isn't

Exactly. Antiviruses are weird, and there's honestly no telling what they're going to detect until they detect it.

Some anti-viruses pick it up on Runtime and that is one of the most difficulties to bypass.

Update released. I've changed a few things, hopefully it fixes some of the problems people were getting.

I'm just going to post what I put in the update log.
Quote:Well, I'm going to be going on vacation for a few days.

Sadly, I'm not going to be able to update the crypter during this time.

In the meantime, if you get an AVG detection, just recrypt. It seems to be sporadic at best.

Do not name your file like "crypted" and "fud", as that also tags an AVG detection.

I should be back in a few days, probably around Monday or Tuesday (8/13-8/14).

Thanks,
Banksy.

Yes, a hyper basic non upx blackshades server for fud testing :) I can try paradox if you like.

Mike Bars - *August 8, 2012, 6:56 pm*
kk
1. When i do a icon now i don't get a error but when it gets crypted there is no icon.
2. it is 4/35
with icon
and without

with blackshades.

It might have to do with the size, like the same detection did a long time ago. I'll be back in about 30 minutes, and I'll look into it.

I can always provide you with a server, for both it and stealth.

Coldfoot - *August 8, 2012, 8:10 pm*
It had an error crypting DarkComet. I had nothing turned on in DC except for the keylogger

Banks? - *August 8, 2012, 10:36 pm*
I know it's throwing errors during crypt. I'm trying to find out why now. It's doing my head in at the moment.

Fixed the problem. Update released.

I hopefully fixed all build problems for everyone.

If not... ?

I'm going to bed now.

I also have this problem. I was told it should be fixed from the update but I either didn't get the update, or it didn't fix it...

I believe the error might be from not having all the proper files...

Can anyone verify if I need more than just these files.
Chronic Crypter.exe
Mono.Cecil.dll

Those are the programs I have and believe I need more files since my error says this.

It makes it to where you can use startup on RATs, rather than in the crypter. However, like the title says, it's experimental. I had one guy that could run a file with it on, but once they started typing (weird, I know), the server crashed.

Ah. Well I'm sure you'll get it working fine soon. Does the botkiller work ok?

Ps:

My Chinese enrypted file is always FUD.

Edit:

Always:

[img]http://elementscanner.su//image.php?ID=953340481cfbac950e03f3d6c68427d5[/img]

Edit: But with new update it's not FUD :(

http://scan4you.net/result.php?id=776ba_24aprc

Edit: I removed the startup and add Patch PEB and it's FUD.

Kaspersky detect the startup.

Oh, I didn't see that post.

1. Yes it will work with UPX.
2. It's because UPX is compressing the file (obviously), and I compress the bytes before they are stored in the crypted file, which causes sort of a decompression with UPX.
3. Possibly.
4. I'll install ESET to find out.

Can we use UPX before or after crypting with Chronic ? :)

(Aug 18, 2012 12:56 PM)brasolino Wrote: *[CITE]* Can we use UPX before or after crypting with Chronic ? :)

You can't use UPX after, because UPX doesn't work on .NET. And like I said, the compression that's already in the crypter pretty much overrides it.

kai59 - *August 18, 2012, 1:30 pm*

Also why my crypted file (00:30 AM 18/08/2012) is FUD with a chinese name and with normal name its not FUD?

Why when i crypt a file with chinese name, the crypted file dont have icon the icon i selected?

Is it only for me the icon changer and the scanner dosent work?

javaPro - *August 18, 2012, 5:43 pm*

Hey banksy, if I try to bind a file, it doesnt seem to work. The server seems to instead replace the file I am trying to bind it with. Would also be great if when you get a bit of free time, to see whether you can make it again so larger files can be binded (files like 30mb in size)

Cheers

I think when you open the crypter and it says Gizzmo with the loading bar, thats downloading the new patch/FUD stub, thats how you know, i mean would be nice to have a version number in the client.

I'm pretty sure Nod32 used to own it, then I switched to a different licensing system (like 9 months ago), they might have it again.

I'll work on Kaspersky after I get avira off.

Hey by the way, does the botkiller function work or is it still in testing?

Also, this may sound silly, but what does the PEB patch do?

The PEB Patch increases functionality with some files (like cybergate), and allows for startup on the RAT.

The botkiller is still in testing.

(When you start to sell chronic, you update it even if the last update was FUD(scantime), it was so good)

Ps: I always check PEB.

You get: A cheap, working, FUD, fast updated, easy-to-use-crypter with included scanner. The best simple crypter I ever had. Working on Windows 8 as well.

Simple and good. But if you're looking for a crypter with tons of features and options, you might try some other, I recommend RDG Tejon. This works, makes files FUD and has a binder, Icon changer, extension spoofer, fake Error and Assembly Changer. Settings are Encryption key, startup and startup method and injection process, botkiller and patch PEB.

Theres nothing to do wrong for this very cheap price.

VOUCH!

That's most likely just your icon, as the 'Luhe' detection is a signature scan for filenames, icons, assembly info, etc.

Like for example, if you named your file 'crypted' AVG would detect it because of the name.

Try a different icon.

Thanks to everyone who has vouched. Really.

Update released with a new feature to make the installed file undeletable.

FUD without icon. I'll try and see if I can do something to get rid of that detection with icons.

Message longer than 35 characters.
It doesn't protect the process, it protects the file. Meaning if a user clicked on the file and clicked delete, it wouldn't delete. The process can still be killed for now.

I'm not certain but I do believe the "undeletable feature" isn't process protection but does make the file undeletable.

When a file is open, you can't delete it by right click then delete.

I need real money. Money I can actually use outside of the internet.

LR doesn't help me when it comes to that.

I don't remember ever being asked if I accepted bitcoin by anyone, so obviously there wasn't a very high demand for people to buy it through that.

90%+ of my sales came through paypal anyway.

i know your problem!

for everyone , i would recomend this!

Dont use icon from a pack or download
just download an jpg on google

Use this with any Jpg png etc. you have , this site is nice ;)

http://www.prodraw.net/favicon/index.php

always no detection problems with icon changer !!

And crypt your file with fake error ! (with what ever Fake Update or something)
Av´s would suspect your server if nothing happens , when you open it!

right now i got 1/35 Ikarus ?

the 5 / 35 detection is without Fake error

just advice , you can do what ever the f*** you wanna do ?

I've already updated twice while I haven't been able to accept payments, so yeah the crypter is my 1st priority. ?

ooo scanning on virus total? i didnt scan on virus total, for ur information..I used the scan virus function in ur crypter..u can check on it..and I tried to scan on my avast to check 2..that totally non sense

and ye i upload to virustotal in ur scanning function in ur crypter(I though it is virustotal because it show me the result of many AV program)..it show me 4-5/35 detected

so u can't use the scanning function in ur crypter while it is there? wow?

then I will just forget abt this..cuz u said in ur signature dat it bypass kis, but when I tried to scan in scanning function in ur crypter--KIS detected it along with some other AV

and so even If I did (just to be pretend I did upload to scan on virus total) u can't scan to check how ur crypter does the work and I can't scan to check how many AV detect it? just WOW

im just WOW for what you think and did. If u dun want people scan on virus total, tell us beforehand. LOL man

Virus Total is NOT the built in scanner. The scanner uses scan4you. Also, KIS is runtime. Sometimes they do detect it scantime, so I have to FUD it just like any other AV.

so ye, the scan function in ur cryptper isnt virus total? I though it is..but even if I did upload to virus total which I didnt(to pretend even I did) y u ban ppls upload to virus total to check? dat some kind of non sense because other crypter seller allow it..but I buy this one cuz one of my friend told me to buy this one cuz it good..Plus I didnt knw in the first place u didnt allow to upload to virus total(which I didnt aniway, I just though the scanner function include in ur program is virus total so that is misunderstand when I ask u question via pm..

First make your grammar better please. I can barely understand the argument, I'll take a crack at it.

You can't upload to "VirusTotal" because it sends the results of the scan to company's. If that happens,the crypter gets detected... So don't EVER upload there if you want your file to stay FUD. Just use the built it scanner or "Element Scan"

?

Confirmed, and I like Banksys work ethic. This crypter is underpriced for what looks like someone who's really worried about making sure his product is perfect.

Was chatting with bansky on msn and he asked me to post this for him ;)

This is a message from Banksy. I (Banksy) cannot post until tomorrow sometime because of a warning.

I've been repfucked, as some of you know. But don't worry, this will NOT effect the crypter.
I'm not going to let a stupid number stand between me and my customers.
I know some people might just quit hackforums if this happened to them, but not me.

Anyways, on to the update.

I released an update today, here is the changelog:

- Removed Kazy.
- Removed Avast (some had it, not all).

Also, the surprise should be out by tomorrow, and by saturday at the very latest.

Thanks to everyone for the support for this crypter.

Support. - *August 31, 2012, 2:49 am*
I would put my life on it that Bansky is the best salesperson on here & that this crypter, it's support & coding are lightyears ahead of any other product on this corrupt forum.

I know not why Banksy was repfucked unfaily, I have my suspisions (expecting one myself now.. J*..) but I do know for a fact, Banksy has never infected anyone & he cares more about support than money.

Quick, calm & full support for every customer.

Updates as soon as a detection comes up.

Incredibly clever coding.

Incredibly underpriced!

Incredibly tolerant owner.

Constantly brings new features to the table.

GLWS dude, still sailing strong!

Thanks, but upon execution, it says "Unable to find a version of the runtime to run this application." Not sure if this is because I have binded a file too. It worked before tho.

Edit: Fixed it by not injecting the binded file.

Yeah, depending on the file it will fuck up.

Injecting tries to inject it into memory, and if it does this, the binded file will be FUD.

However, it doesn't always work with every file.

For example, most setup files will mess up, and you would need to disable injection for the binded file.

No problems, It's FUD anyway the file I'm injecting. Also great work on FUD'ing the icon ;) badly needed that.

If you're talking about on runtime, it's because of sonar. I might have an idea to bypass it though.

That's why it's an alpha. I'll look into it. I've only tested most of the things over LAN, so things like RDP might mess up on actual clients.

Use the new feature of the Crypter, Sona/Avast next to the botkill option. It will delay the exe for 20 secs before it opens your server xD

Imperialz! - *September 5, 2012, 1:14 pm*
I did that.. it still came up. Also thats for avast and the other antivrus. Norton it shows up and malwarebytes it shows up :D think it needs to be re-fud

If it's when it's first run it shouldn't do that. It might detect it on startup though. I'll try and check tonight though.

As for Avira, I just got home. I'll see what I can do. I might also add the chat function to the crypter later tonight, as well as update Nova with a few stability issues.

Alfred - *September 5, 2012, 2:12 pm*
Bought it, sent transaction code.

Looks really good :D

EDIT: Works like a charm

Judgement Day - *September 5, 2012, 3:59 pm*
Bug status report with Nova, Can't see your username on the Chat feature but you can chat fine. Bots are not stable for what i can see. If you stop the connection and start it back again you won't get all of the bots online. Desktop Feature does not work and you can't open multiple desktop views. So far those are the bugs i have found

Banks? - *September 5, 2012, 4:57 pm*
It's because you weren't connected to the chat (server was down).
I'm buying a new VPS to host the server for the chat and the crypter, then I'll update the crypter for that so you can actually crypt, then I'll fix the detection from Avira.

Coldfoot - *September 5, 2012, 5:05 pm*
Not really a bug, but a little annoyance in Nova, is the status. It only changes when you send a new command, and not when the command has started and finished.

But over all, I think it will be a very good RAT. I love that's simple, and I hope it stays that way! :D

Banks? - *September 5, 2012, 5:15 pm*

Update released.

New in this update:

- Added chat to Chronic, and changed a few things on the chat in Nova. Keep in mind these are 2 seperate chats.

- Fixed Avira's "TR/Dropper.Msil.Gen" detection.

- Added a bit more stability to Nova. Please send me all the bugs you find, and all the things you would like changed.

- On request, I made bots on Nova update their status every minute saying "Waiting" and the time that it was sent. Keep in mind that the bots are using Async sockets, and if they do actually disconnect, they will disappear from the list.

- Moved servers. Now I'm not hosting the server on my laptop at home. xD

- Probably more that I forgot.

I will work on Kazy and see what's going on after school tomorrow.

If Banksy decides to stop the crypter, I think he will be the first to post something about it, it's not because he doesn't answer to us since few days that it means that he stopped the crypter, like us, he has a life, and maybe he can't reply here due to X reason, we have to be patient :)

People, remeber Banksy also has a very busy life apart from HF.

He would never just stop the crypter & I can personnally garentee he constantly works of new ways to make this brilliant product better.

Banksy is an amazing coder & Chronic is so under-priced, it's unbelieveable. Trust in the coder & satisfaction follows.

With all the people who use the crypter being its the cheapest one in the market with the best and easy to use options you can expect it will get detected alot faster thats for sure....

none the less i like this crypter one of the best the bad news is he made his crypter download public and people can crack netseal easy so just think of all the people who might be using the crypter cracked.

Dont worry, I know Banksy, and his crypter has never been cracked for more than one year. Cracking Net Seal doesn't mean you will be able to use the crypter.

What DeMoNi said. No one on this forum will be able to crack my crypter, I can guarantee it. I was one of the first to do a cloud stub/protection idea on this forum, back in 2011.

So why is that in your cracking folder? It's not infected, I can assure you that. Check the code in Reflector or SAE, it does nothing but send something to the server and receives your serial back.

Those 2 AVs together normally mean you named your file along the lines of 'crypted'. Don't name it that and it should be FUD.

Not exactly. The customer didn't state which Sandbox he's using. Some like sandboxie allow injection, others block it automatically. If it's one of those AV built in sandboxes, they are extremely restrictive and many files (not just crypted files) won't work in them.

In your bs server, check nothing, drop location in appdata, but nothing else, this will reduce the corrupt or stability i guess, and in the crypter, you can add icon, fake message, startup, custom injection, botkill (eard it crash bs servers), patch PEB (i don't know), anti-delete (don't know too, didn't tried yet), sonar/avast (working)

Thats correct the only thing i put on my BS server when i make it is put mutex and appdata, everything else leave it unchecked, and on the crypter you can enable everything except botkill, i think botkill is fucked up. i tried it on my self and i crashed my PC so don't use it,but everything else you can. I have tested everything on the crypter and it works 100% with BS If it's currupt then check your BS server and make sure the only thing you have on is mutex. Hope this helped

How often do you recode it? I hope it's not this frequent... I just lost all my 80 slaves due to it being super detected. If it's a rare thing though, and you only re-FUD it, then good job on the crypter. ?

It's normally pretty rare. It's only when I'm stuck with the current method and need to come up with something new. Usually a new method holds off a recode or anything like this for a while.

Hey man any ideas on when we can expect an update? I lost 190 out of 200 bots. Will this update by any chance have startup? Like to where it injects in the startup folder etc.

the crypter already has start up why don't you read it

I'm not sure how. Unless there are other bots on the system uninstalling yours, then it should be starting up 100% of the time.

Unless he is putting startup on the server and then crypting with startup, that could cause issues, no?

Its darkcomet and i have all options basic as it gets...basically connect and do nothing else. Then I have Botkill, Patch PEB, and Anti Delete on. And yes I do have startup/installation box checked

The built in scanner goes to http://scan4you.net/ just scan there manually if it doesn't work, instead of filling the sales thread with complaints.

No but they do upload to a virus company, I just don't remember which one, and mediafire uploads to bitdefender.

And on top of that, Dropbox willingly hands over files and any connecting data over to authorities so it isn't smart to host servers on it anyway.

JIT Debugging
To enable just-in-time (JIT) debugging, the .config file for this
application or computer (machine.config) must have the
jitDebugging value set in the system.windows.forms section.
The application must also be compiled with debugging
enabled.

For example:

<configuration>
<system.windows.forms jitDebugging="true" />
</configuration>

When JIT debugging is enabled, any unhandled exception
will be sent to the JIT debugger registered on the computer
rather than be handled by this dialog box.

That's typical for a very cheap crypter used by a lot of people.

I don't mean anything against the seller, he's a nice guy, it's just this product is a little oversold.

The crypter has 345 users. That is the count after the old database was cleared (old users could get back their licenses), and new users were added when they bought. It used to be 550+

That is a little more (probably less now actually) than Inifinity Crypter, judging from the screenshot.

I actually believe that there are people from antivirus companies using my crypter, which wouldn't surprise me.

It's actually not that surprising. If you think about it, antiviruses will want to be on top of their game, so by detecting major crypters (I would count mine as one, at least on this forum), they are adding more definitions to their database which ultimately gets them more customers.

In the next update I'll have a more specific error message to what's happening. I'll be able to help you more once you send me the error it says.

Also, I found a bug with running .Net files that made them not run at all and try to inject (and fail). Fixed that, however that brought Kaspersky.

http://scan4you.net/result.php?id=65f49_2ie7ne

I'm going to release this update, then work on Kaspersky and release that once I get off.

Sorry Banksy, still got the issue with it wanting me to run it as admin (even when I do). I have no AV

running, and all firewalls are off. Not to sure why this is happening, cant even think of anything I have done which could make this happen. This has never happened before so I am a bit stumped. The only thing that could of maybe had an effect on this is when I done a registry repair in CCleaner.

Make sure C:\Windows\System32\drivers\etc\hosts is not read only.

Dont see how people are getting 6 detections, Just crypted 1/37, like it should be

Mike Bars - *October 24, 2012, 7:43 pm*

do this

pick your sever

Click on Generate like 5-10 times

Put a Icon just google icons if u do not have one.

settings do Sonar/Avaste, Startupp, Injection etc.

then build it.

** Debug JIT **
Per attivare il debug JIT, è necessario impostare il valore
jitDebugging nella sezione system.windows.forms del file di configurazione
dell'applicazione o del computer (machine.config).
L'applicazione inoltre deve essere compilata con il debug
attivato.

Ad esempio:

<configuration>
    <system.windows.forms jitDebugging="true" />
</configuration>

Quando il debug JIT è attivato, tutte le eccezioni non gestite
vengono inviate al debugger JIT registrato nel computer,
anziché essere gestite da questa finestra di dialogo.

Just a question, does this crypter supports several servers installed on one pc? and several startups offcourse :)

because some cryters inject only on the same *.exe (vbc, applaunch) but when the machine restart only one come up...so multiple servers?

can whe chose the name of the *.exe injection / and the name of the startup?

SIM-23882 - *October 25, 2012, 8:12 am*

Using an icon, still getting 6 detections, avg now..

when is this going to be Fud again :D and can some 1 tell me settings for dark comet and this crypter please.

Yes, this crypter has absolutely no problems with different servers. The only thing you will need to do is create different startup keys for them, but that's a windows limitation, not the crypters.

Banksy, I just thought of something. Why don't you add some kind of "report detection" button. That way, when people scan a file and it's detected, they could hit the button and it would send you the scan, the file, and the settings. People could spam that, but to combat it, the client could MD5 the files it crypts and store that. Then compare it before sending to verify that it's a file crypted only by your crypter.

On the 17th, he posted 5 times on various coder threads, then it died. NOTHING SINCE.

I am not defending him but I think it is extremely curious; when somebody establishes a trusted persona they don't just throw it in the trash.

One of his last posts was commenting on the coder of Vcrypt. He said. "I'm good friends with Vysse, and I haven't seen him in a while. Don't know what to tell you guys. :/ " That was on the 13th then Banksy disappears on the 17th. He doesn't realize the same thing is going to happen to him shortly.

Other crypter are failing in the same exact pattern:
1. Noob Crypter https://hackforums.net/showthread.php?tid=2294639&page=12
2. Star Crypter https://hackforums.net/showthread.php?tid=2294639&page=12

4. iCrypt https://hackforums.net/showthread.php?tid=1764868&page=166

These are a few.

Sheikh and Saddum look like they have both had some problems but they are awesome coders with good security practices.

I think if you have on of the aforementioned failed crypters, it is time to burn your HD's and take the security off of your WiFi. Better to be paranoid then sorry.

No this will increase detection rate and no one wants that.

1. Darkcomet - yes. Crime24 - Never tested it, I could test it for you though.
2. Quite a few, though it's been slow lately.
3. Normally it is, I've just been in a rough patch lately, which I should be out of in the next update.
4. No.

Update released!

The crypter uses reshacker to change the icon, as the old way I was doing it was detected (odd, I know). Anyways, does your computer run reshacker fine?

No client side update needed, but I have fixed the problems with Paradox and also some binding problems when using .NET files.

When the crypter ran a .NET file, it paused all execution of everything else in the program, so it couldn't run any of the other files (if there were any more).

.Net files should all be in working order now.

You might want to look at the first page.. You will find that Chronic is $15 for lifetime.. I do Agree that Bansky has created a fantastic product and should be on sale for more.

Patch PEB only affects CyberGate users for the most part.

http://www.iconarchive.com/ is a good place for icons.

I can't seem to replicate the detections you have though.

http://scan4you.net/result.php?id=cd87d_2m6642

Are clicking the "small" button when building on darkcomet?

dezee - *November 10, 2012, 8:37 pm*

Im using the full editor with dark comet if that is what you mean? (no compression)

It could just be the way im configuring the server + Crypter, I will continue the test runs.

I have full faith that the crypter is FUD, just trying to get my configurations right.

Cheers for the help mate.
with no icon, PEB and SONAR checked I get 0/35
http://scan4you.net/result.php?id=16347_2m6agg
With random icon off that site (facebook with a santa hat I got 4 out of 35.
http://scan4you.net/result.php?id=f28e3_2m6b3s

So its just the icons, not my configuration or your crypter

scorpionwally8 - *November 11, 2012, 2:38 am*

You need to send me the loader.error file. There are a lot of different errors that could have happened.

Also, looks like sales are going to be down for a while. Paypal hates me. They just limited my student account (<- I didn't even know that was possible?), so I won't be able to take payments until I get it sorted out.

You mean the crypter itself or the crypted file?

If you're talking about the crypter itself, it should work, but that seems like it would be a Net Seal problem and not the crypter's. I'll send you the most updated link though so you can use it until whatever is going on is fixed.

Judgement Day - *November 11, 2012, 9:37 am*
it's the crypter it's self that does not show anything but Form 1 at the top. I downloaded the latest version from the thread

EDIT: ok sp i found the old file that i had from the back up and it works fine. But when i downloaded the crypter from the thread earlier it would say Form 1. idk what it was but it works now

That download is just basically a loader that is supposed to download the latest update.

Once I finish this update I will send you the link.

I did make a new crypt 1 min ago and i got 1/35
only to let you know :)

Her is the scan report:
http://scan4you.net/result.php?id=1e695_2ma7nk

btw, awsome crypter! Fast update, nice features and its cheap!

Pr4wn - *November 11, 2012, 1:39 pm*

Hands down the best crypter on HF. Support was incredible and it's always FUD. It's hard to find a good crypter now days so I'm pretty happy that this one works perfectly. Can't thank you enough.

Banks? - *November 11, 2012, 1:42 pm*

Stub update released. No need for the crypter to update, but you need to crypt again.

Fixed the ESET detection (last time it came back).

Another update released to fix Kaspersky detection when startup was used.

I don't mean to butt-in your thread, Bansky, but here are my suggestions:
1. Make it so users with NOD32 cannot open the crypter. NOD32 auto-distributes "unknown" files. Fucking hate that AV.
2. BitDefender, F-Secure, G DATA, BullGuard, Immunet - Nobody uses those, they all share the same database because they all suck.

either make it pump its size after first run, i think auto distribution is for smaller size files.

Hey Banksy,

One of my customers was wondering if your crypter supports Barracuda.

Does your crypter support managed executable?

Thanks

Yes it does with most, except for Insomnia or files that are obfuscated (Insomnia being one of them).

Don't use startup in the crypter, that's the settings that were used to test. Didn't test it with startup though, but with the way it runs, I'd assume it messes it up.

Update released.

Update notes (Click to View)Fixed Avast and G-Data detection "MSIL:Crypt-LL [Trj]"
Fixed ESET detection "Trojan.MSIL/Injector.AUD"

NOTE: I know some users are experiencing detections with "Gen:Variant.Kazy.115178" from 5 antiviruses.
I am working on this and trying to figure out the cause.
It seems to be related (once again) to larger files such as DarkComet.

You shouldn't need 4.5. The crypter's builder uses .NET 3.5, and the output uses 2.0.

I changed the fake error to only show up one time actually.

Patch PEB makes CyberGate and some other bots with working/stability.

Sonar/Avast delays execution by 40 seconds to bypass Norton Sonar and Avast's runtime.

Banksy is simply the best. I have been buying crypters and using crypter services for ten years. Bansky is the best, most decent, honest, smart guy I have worked with. I bought bansky's crypter. Thanks to our wonderful president, I lost my job, my apartment, had to sell my computer, I had nothing. It wasn't bad because I broke into this old guy's tool shed and set up a fan and a radio. If his kid didn't come over to borrow his mower I probably would still be there. :P Found another job, less than half the pay but I rent a room now and I get to use the owner's router. I contacted Bansky, he looked up my info and had me back up in less than an hour.

Bansky works hard and provides a great service at an unbelievable price, he is one man and he needs downtime. I respect him and his need for a break then and again. When Banksy decides to give it up, I say I have gotten my more than my money's worth and best wishes for his health. He will be successful at anything he tries, I love this guy.

Yes, but even after the update it wasn't FUD.
I hope this is not the end of chronic.
I think Banksy is just a bit busy ATM. ;s

End of Chronic Crypter ? I doubt, maybe I'm wrong, but I think we have just to wait :)

I assume Banksy just is busy irl, as he hasn't been online for a while.

Last Visit: 12-04-2012 06:12 PM (4th December 2012)

But, I am begin to get impatient - maybe that's just me.

I'm also beginning to get impatient. Meanwhile, let's discuss possible conspiracies involving the FBI and Banksy.

I dont think it's the end of it, but we really need an update...

Most of the free crypters here have a lower detection rate then chronic.

The free crypters get picked up by the major av company's where chronic isn't that's the difference mines currently 4/35 that's just the server with startup and a icon using dc

I am extremely far behind, I have to admit. I am very sorry about any and all inconveniences. I don't want to make up any promises. I just want to say that I am working on this.

Also, I'll be making a new thread once the update is done.

Most of the "free crypters" install a leach server on your vics. Ever wonder why you lose them so quickly?

There is a reason why they are free. You spread, they get the vics. Just be careful.

If you actually looked at the thread title you would know the price is $15/lifetime.

Thanks Banksy for updating us, can't wait for the update. :D

Does this crypter work with Spy-Net?

Update: I was told it does, leaving this here if anyone else is wondering.

My BlackShades server crypts fine with Chronic. It gets less detections than DarkComet.

Do you know if you are able to crypt the dark comet client as well as the server, that may help with

detections

Scanner down for me too [as elementscanner too]: Banksy it's a good coder, I think this is the longest waiting time between an update and another one, so we have to wait for Banksy :)

Be patient and wait I believe it is 4-37 and the major ones don't detect it so it isn't the end of the world.

I've a question please

I want to buy this crypter but i have 2 PC

So i want to use it in the 2 PC with the same username and password (same licence)

is it possible ? or i will get banned ?

?NoShame - *December 11, 2012, 8:18 am*

Come on man update it please..

It's been like 1 week - 10 days I'm getting 5+ detections..

When will the new update be released

I've been asked that a lot, and honestly, I don't know. It should work, but no one has confirmed/denied it yet.
Sorry everyone for the long time since the last update. Life caught up to me, and it caught up quick. I don't want to ramble, so here's the update notes.

- Added saving/loading settings.
- Added "Botkill" and "Anti Delete" options back.
- Removed Kazy (BitDefender, F-Secure, G Data, BullGuard, Immunet) detections (on DC and everything!).
- Removed ESET detection.
- Removed IKARUS Security detection.
- Removed A-Squared detection.
