phybe? - March 13, 2012, 7:52 pm

They finally updated their page today and I have been acknowledged. I worked with ??¢??? who was also recognized.

Here's the official page: <http://support.apple.com/kb/HT1318>

This makes two, since I got into Google's which can be found here:
<https://hackforums.net/showthread.php?tid=2215472>

As it states, it was a XSS vulnerability.

I hope to get into Microsoft's soon as well.

Oh also as many people have mistaken me for, I am not Indian :P

Ace Coder - March 14, 2012, 4:33 pm

I'm surprised no one has asked, so I will. What was the vulnerability? It is patched now so it is safe to share it now right?

Again, congratulations.

Again, congratulations.

It was a XSS vuln like I stated and since it's patched it doesn't really matter but it had to do with the Apple store, it was nothing too dangerous.

iampoor - March 14, 2012, 6:04 pm

Congratulations man, that's a great achievement.

Now look for their next vulnerability. :)

Unfortunately I did not and that's good that your starting, if you want any E-Book resources, I have quite a few on pentesting as well as ethical hacking in general.

Bridge - *March 19, 2012, 5:39 pm*

I may have to pm you about that then, I am extremely intrigued with pentesting.
