Thread: [Get passwords/usernames to most sites using Google.](#)

antigrav - March 13, 2012, 8:14 pm

Hi, HF. I'm not sure if this has been posted before or not, but it takes like 5 seconds and is really cool. Sometimes the accounts don't work (note: I've tried a LOT of minecraft accounts that won't log in) but it's useful for other stuff like mediafire and such.

I really doubt anyone needs detailed instructions, but here they are anyways.

Step 1: Go to google.com.

Step 2: Copy/paste this into the search bar. (I recommend you save it in a text file in case this thread isn't here one day.)Code Program: Url/Host: http://yoursitehere.com Login: Password: Computer: Date: Ip:Step 3: Pick a site and type it into where "yoursitehere" is.

Step 4: Try ALL the accounts! :D

That's it. I love you, HF. ?

Thanks I have been looking for something like this, will try it out.

KernelMode - March 13, 2012, 11:02 pm

This has been posted before except they said to use it in pastebin.

it just comes up with websites what is the hack?

Devote - March 14, 2012, 12:51 am

I am just curious what I am looking at?

<http://screensnapr.com/v/ax8zJU.png>

I was suppose to switch the yoursitehere to a site I wanted the information for; correct?

Are these usernames/passwords from other users that have already been submitted?

... Are they all fresh?

Are these usernames/passwords from other users that have already been submitted?

... Are they all fresh?Basically it's iStealer (and possibly various other keylogger/stealer) logs. If you want to adjust the freshness of them you can go into the time settings of Google and adjust

accordingly (in the last week, month, day, etc.).

CrapSalad - *March 14, 2012, 2:44 pm*

This doesn't work for every site does it?
How does one protect itself against this?

klutch13 - *March 14, 2012, 4:16 pm*

thanks man. i really appreciate this finding.

sinfu1z0r - *March 14, 2012, 5:21 pm*

Thank you mate! I will try this and get back to you.
