Thread: [\[MUST VIEW\]Open Source ddos/dos tool\[MUST VIEW\]](#)

Hacker_Adi - March 16, 2012, 5:57 am

Hello everyone i'm starting a new FOSS project.It is a Opensource ddos/dos tool.

You have to download the .sln file and then you can code the ddos/dos tool and submit it to given website below

This DDOS/DOS tool is by the hackers for the hackers.The details about this project below:[/b]

Details

[b]Project Name: FOSS DOS[b]

[b]Language: VB.NET/Mono[b]

[b]Website:<http://projectfossddos.weebly.com>[b]

Sorry for the incorrect sp3lling error in poll title

I think that every hackers should contribute in this project

Ethernal Five - March 16, 2012, 6:05 am

I voted No. Why? Because there are hundreds of ddos tool and almost all of them are slow as shit. Plus i dont see anything special about this one.

Gook - March 16, 2012, 6:39 am

Add some pictures, or something no one will download the fill untill there are some pics or a virus scan.

Regards

User MD5 - March 16, 2012, 7:26 am

Yeah, you should really add a Virus Scan, and a Picture.
No one will touch that file until that's done.

(?°?°)?(???? - March 16, 2012, 7:26 am

Can you not put [MUST VIEW] in your title? We don't have to view it.

Breakbeat Junkie - March 16, 2012, 7:27 am

I don't really see where DDoSing is hacking though...

IttRaXx - March 16, 2012, 7:43 am

1. You have 14 posts
2. You have no rep
3. You are trying to get us to download some shitty program when we have no pictures to go by. It might just be me, but I smell something a bit fishy here.
Reported.

DDoS'ing is not hacking so it's not a for the hackers by the hackers tool. It's a by the newbs for the skids tool. I vote no.

assassin_D - March 16, 2012, 7:57 am

Im going to say 1 thing to express myself...

Skid.

Hacker_Adi - March 16, 2012, 8:29 am

You all think i'm a skid or fool then you all ask yourself do you never use ddos/dos tool.You all has used a ddos/dos tool.

[Code]DDos is not hacking[Code]

Yes I agree with him that DDOS is not hacking but it is a part of hacking.It's way to crash a website/server.

Do you know you can crash any website by using just basic html commands and it also come in DDOS

Get C:\Con\Con\NUL

DDOS is not always flooding,etc.. you can do this by a simple command.

And my last thing that i'm not creating a slow or silly ddos/dos which uses old techniques.I'm going to create a ddos/dos that is dynamic,cross-platform(also work on Mac/Android/Linux/Unix/Windows,etc..)

In my thread i have also wrote about Mono it's a Opensource form of .NET you can import your .NET project to it and then compile it now your .NET application will work cross-platform.

When Microsoft released .NET it also submit .Net architecture,designs,etc.. to ECMA under section ECMA-135.When ECMA started working on Mono many opensource/non-opensource programmer contributed in it.

You can also import your silverlight apps to cross-platform Moonlight it's a part of MONO

Antivir: Nothing found
ArcaVir: Nothing found
AVG: Nothing found
BitDefender: Nothing found
VirusBlokAda32: Nothing found
VirusBuster: Nothing found

[Report overview](#)

Scanned by viruschief.com

Check the website again you can see the proof that it's not a virus.

Deceptive - March 16, 2012, 8:42 am

You're a skid, and an obvious one. You obviously have NO idea what you're talking about except for googling and C+P'ing onto your thread/posts.

Hacker_Adi - March 16, 2012, 8:54 am

Hey Deceptive i'm not a skid.And i'm not talking about any C+Ping.??

Those who supported me can contact me through this project website.???

Check the website again you can see the proof that it's not a virus.

Once again, nothing you mentioned is hacking. A denial of service (distributed or not) is NOT hacking. DoS/DDoS does not take any type of intelligence. All it takes is a program or script and a target. ANY idiot with access to the program or script could DDoS. There's a word in the community we have for people like that... skid. You aren't accessing any information, you are preventing the access of information. That is everything that hacking is against.

I really don't understand this ridiculous blackhat activity. What the fuck do you get out of taking down a website? Does it make you feel like you've achieved something? Do you think it's going to get you laid? Do you think it will have any kind of positive impact on your life? What is the point?

Sho?kwave - March 17, 2012, 8:32 am

Okay, so why where 2 threads needed for this?

gixslayer - March 17, 2012, 8:35 am

I have no clue, but it's pretty amusing to read though. Surprising to see how stupid people can actually be.

Mahyem - March 17, 2012, 8:39 am

It already exists, and it's called LOIC. (Yup, it's C#.NET and open source)
Have a bad day.

gixslayer - March 17, 2012, 10:38 am

And a piece of crap :)
Love how people DoS on their own IP. Laughed even harder when people suggested to use a proxy.

Mahyem - March 17, 2012, 12:27 pm

Love how people DoS on their own IP. Laughed even harder when people suggested to use a proxy. Still better than this thread ?

Hacker_Adi - March 18, 2012, 12:03 am

I'm going to remove this thread because in this forum no one wants to help/contribute but they will discourage someone from doing something different from others????

gixslayer - March 18, 2012, 2:53 am

Yea right...

Yet again I'm amazed by the stupidity of mankind.

Meerkat.? - *March 18, 2012, 4:20 am*

Why 2 threads for another stupid dos tool? I voted no, fyi.

Hacker_Adi - *March 18, 2012, 5:02 am*

because te old one is going to locked so I think to keep this project alive I make a new thread???

Mahyem - *March 18, 2012, 6:33 am*

This isn't a project.

U fagz. :-(

Go "hack" with LOIC and GTFO

Sakozi - *March 18, 2012, 6:58 am*

yeah what is so special about this ddos tool ??
