Thread: [? ? ?*\[TUT\]Shutdown All The School Computers. \[TUT\]*? ? ?](#)

xSellize - March 18, 2012, 4:14 am

Hello HF,

this is a awesome Method to shutdown all Computers at school, library etc. :D and i wanna share it with u HF :D

This method only works if you are Sharing connection with other computers . Like in the School , Library etc...

Step #1:

Lets start ;) so first of all Open CMD if the Admin Blocked it , then : Open Notepad and write:

Code command.com

Step #2:

save it as "whatever you want.bat". (without quotes).

Step #3:

Excute it !

Step #3:

Once CMD Opened :

#1 Type "@Echo Off" And press Enter. (without quotes).

#2 then CLS.

#3 to see if there are others in the same Server or not type :

"netstat" and press Enter. (without quotes).

#4 So as you can see, where mine says idex, that is the name of my computer, so if your in a school, you and everyone else should have a similar name (this is not vital).

[img]http://img842.imageshack.us/img842/9215/29407027.png[/img]

Step #4:

Type one more time "CLS" to clean the screen. (without quotes).

Step #5:

type "shutdown -i" and press enter .

this should appear :

[img]http://img708.imageshack.us/img708/33/13619862.png[/img]

Step #6:

you can then edit the setting of what you want the computer to do.
to add the comps you want to shut down, click add and manually enter the computer names, most
comps will have the name printed on them, or if you know the ip this will also work.

[img]http://img135.imageshack.us/img135/9974/64884828.png[/img]

If you don't know them, then press Browse and find the computer name, and then shutdown it or do
whatever you want to it

[img]http://img837.imageshack.us/img837/3889/13811454.png[/img]

enjoy it

;)

Wanaka - March 18, 2012, 4:28 am

Is administrator privileges required to do this?

Zeaoh - March 18, 2012, 4:31 am

How are we supposed to use this, when we need admin access? And most school are blocking all
methods.

xSellize - March 18, 2012, 4:34 am

No, I did this 2 days ago at school while everyone was taking a huge reading test xD
Just follow the steps :D

Winterfell - March 18, 2012, 4:35 am

i tried using shutdown -i but I need admin rights :(

Dallas Green - March 18, 2012, 4:46 am

Usually if you enter "command.com" or ""COMMAND"", then you have admin rights for the
computer.

This is how my friend changed the password on the School's admin.

Just opening CMD won't work, remember to follow the WHOLE tutorial.

Silv - March 18, 2012, 4:48 am

My school blocked .exe/.bat etc:(

Kinda sucks, no fun in school!

Xantana - March 18, 2012, 6:43 am

THANKS BRO I AS WANTING TO DO THIS FOR A LONG TIME

Fragits - March 18, 2012, 6:45 am

I tried doing it, but I need admin rights.

Shutdown. - March 18, 2012, 6:49 am

Aw, I read this thinking the post was about me. :(

OT: Nice guide though I have no use for it.

Shot Caller - March 18, 2012, 6:49 am

Lol bro, my teacher leaves the room all the time and I just go on his computer and do shit like this all the time but most of the time it's just to unblock all the programs so we can all play games :L

greenpois0n - March 18, 2012, 9:53 am

lol xD

it will be very useful for users here xDD

thx for ur sharing :D

CoreModdingCom - March 18, 2012, 7:56 pm

I tested this on my computer, and it didn't work.

I clicked browse and it gave me this.

<http://ttgdime.com/dimegrab/images/234ff8.png>

Turtle™ - March 18, 2012, 8:00 pm

nice tut, thanks for sharing

Keep up the good work

greatiq - March 18, 2012, 10:47 pm

I Got this error " Access is denied"

Golliath808 - March 19, 2012, 1:40 pm

Ofc admin rights needed, thats why you can't spread your file too in a limited network

yummy baller - March 19, 2012, 4:32 pm

i tried this multiple times using different methods. the windows xp firewall blocks any interaction between computers in the network.

also if the admin blocked .bat files, try searching C: for gpedit.msc and look for the "block cmd" option in admin templates. then you should be able to find cmd.exe and do this

Juice3041 - March 19, 2012, 7:31 pm

Thanks for all the info might try this at work lol

Itsa win - March 19, 2012, 8:32 pm

LOLOOL this looks very fun. :P Might try this.

Tando - March 19, 2012, 9:22 pm

LOL tell me if any of you guys try this, seems legit.

Michael. - *March 19, 2012, 9:28 pm*

If your school network has any type of security features implemented, this will not work. You will need admin privileges to perform this type of operation.

king225 - *March 19, 2012, 9:50 pm*

nice tut. really a best trick to shutdown remote computers.

Infadale - *March 20, 2012, 1:13 am*

This won't work for my school, the teachers have LanSchool and the computer "expert" snaps onto anything (like youtube in class) in a few seconds...

Pyro - *March 20, 2012, 1:38 am*

Does not work for me.. You need to be admin

Kurusu Makise - *March 20, 2012, 1:49 am*

If your going to attempt this make sure you make your computer shut down as well or else your just going to have a massive poker face and look so suspicious.

greenpois0n - *March 20, 2012, 8:04 am*

I've tried it today and it works LOL :D

I alway Shutdown my teachers comp. xDDD

kid protocol - *March 20, 2012, 8:33 am*

You will still need admin rights, cause even as a .bat file u still will have to supply user name and password to run anything that is blocked. .bat is just to automate....

ILLUMINATIE - *March 20, 2012, 11:28 am*

Thanks bro nice tuto :D

Regards ILLUMINATIE

megaman123 - *March 20, 2012, 11:45 am*

this works! my best friend tried this and the school techies spent 3 hours trying to figure out what happened. then they gave up.

xSellize - *March 20, 2012, 12:00 pm*

Thx to all ;)

I found another method if u cant find cmd or something like this

Step #1:

Right-Click on Desktop > New > Link

Step #2:

Now, DO NOT PRESS BROWS....

write now shutdown -i and click next and than again next

Step #3:

double-click on the created file ;)

and u finish....

(° ? °) - March 20, 2012, 12:07 pm

(Mar 20, 2012 12:00 PM)xSellize Wrote: [\[CITE\]](#) Thx to all ;)

write now shutdown -i and click next and than again next

Step #3:

double-click on the created file ;)

and u finish....That looks interesting, I'm going to have to test it.

Bartuc - March 20, 2012, 12:49 pm

Some system administrators would have batch file execution disabled. Another way to do it is with a modified cmd.exe [\[TUT\] Re-enabling CMD and Regedit](#)

Mr. Anderson - March 20, 2012, 1:01 pm

This doesn't work because you need admin privileges and remote access enabled on the target machines.

greenpois0n - March 23, 2012, 11:24 am

it works !! yesterday I´ve shutdown the schoolserver LOL....

Website down, ALL computers down xDDDD

_Austin - March 23, 2012, 11:41 am

im not about 2 go on teachers acc for admin access so worthless lmao

khalids19 - March 23, 2012, 12:00 pm

(Mar 20, 2012 12:00 PM)xSellize Wrote: [\[CITE\]](#) Thx to all ;)

i just used nmap to figure out the school computers IP address and now am gona try to shut them all down?but im afraid...what can i do so that i wont look suspicious?that am the one who shut them all down?cause this is going to be very serious in my college

Zurree - March 23, 2012, 12:20 pm

When i press Browse it says "active directory domain services is now available right now"

How do i remove/fix it ?

hellfire191 - March 23, 2012, 2:01 pm

(Mar 18, 2012 04:31 AM)ZeaoH Wrote: [\[CITE\]](#) How are we supposed to use this, when we need admin access? And most school are blocking all methods.
Once you gain access to CMD

type in: 'net user administrator 'then new password here'
leave out the apostrophe's though.
- this will enable you to sign onto the admin account.

Stilez - March 23, 2012, 2:12 pm

nice tut, but command prompt is blocked no matter how u get to it, run, then CMD, command.com, start, all blocked

DubStep-- - March 23, 2012, 2:19 pm

Thanks man, I done that a few years ago and it's fucking awesome!
Going to try that again ;)

Astor - March 23, 2012, 3:58 pm

sounds like I could find a lot of uses for this.

Exploit. - March 23, 2012, 5:13 pm

I remember the old days, when I used to do this. The teacher would be raging, and I would be having my troll face on. :)

itsbeeten - March 23, 2012, 6:33 pm

When it comes to grading days this is what im gonna do.

Andreavedy - March 26, 2012, 1:02 am

I logged as Administrator (I know the password LOL) but when I try to turn off a PC, it appear "Access denied". With netstat I see only teacher PC.

D Generation X - March 26, 2012, 1:47 am

nice tutorial bro..keep it up. good job.

Tin_Kode - March 26, 2012, 1:56 am

very nice tutorial keep up the good work

crazy5150 - March 26, 2012, 1:59 am

hehehe great idea goto to spread this ida

kvostaa - April 24, 2012, 2:41 am

It's not working for me :(It says: The network path was not found. I tried to use Browse, but it gave me error: Access Denied

G Ked - April 24, 2012, 7:53 am

Is their anyway to do this on mac?? Need help.

Billy Hope - April 24, 2012, 8:13 am

Thanks i'm on the school computer now gonna try it =P

Zayat96 - April 24, 2012, 9:31 am

Very nice tutorial! And funny one !! :D

Emyyy - April 29, 2012, 7:44 am

Don't work at my school , is most secure in my city :(, is like a jail :(

tumaeka123 - April 29, 2012, 8:02 am

i use windows 7 starter and im trying to shutdown PCs who are on our wifi. well those people are at my home they are my brothers. anyways. they windows 7 pro and whenever i try it i got access denied 5. any help?

p.s. their pc has password and administrator is not activated. i think i need to get their passwords. but it's impossible. they wont. i cant even put keylogger on their pc. it's just impossible. any help?

Appliance Warehouse - April 29, 2012, 8:50 am

Not sure that this actually works...

:(

You would have to have some sort of admin access of some sort, then all of the computers would have to be setup in some sort of group that would always listen to the admin computer?

Or can it just work on any random set of computers?

2me4u - April 29, 2012, 11:31 am

If this works youre really lucky. Most schools have protection against this sadly.

EOBOTS - April 29, 2012, 4:20 pm

i tried this and it says permission denied or somethin

biceps - April 29, 2012, 4:54 pm

WOW

this is a great tutorial.

Thanks

Pharaoh² - April 29, 2012, 6:56 pm

Too easy, sorry haha

>>if anyone can't open cmd.exe just find within the windows folders (I remember making shortcuts to C:\ or right clicking on the start button and hit explore or something like that, tons of ways to get cmd.exe, or just use a flash drive). Since most schools ""block"" .exe's (and the reason why I use so many quotes) just rename "cmd.exe" to an exe that DOES work. The calculator should work, microsoft word should obviously work, just name "cmd.exe" to "notepad.exe" or "calc.exe". That's what I did at my school before using cain and abel and jacking about 2/3 of the teachers' email accounts and plenty more while in high school

hhacker - April 30, 2012, 2:32 am

you can go to the terminal and type "net view" and you are going to see all the pcs in the network and next just type in the terminal "shutdown -i" and put all the pcs and bingo. but remember you need to be admin.

#Root - April 30, 2012, 2:39 am

ok first thing`s first if you want to bypass cmd at school command.com is not the right way to go,

First use cmd to make your self and admin account.You can google how to do such. Next open cmd oh your new admin account. Type Netstat. Copy thos Ip`s to a notpad. In cmd again type cls then hit enter then shutdown -i. Open your notpad and add the ip`s. Shutdown. You where right for the most part...most school will block cmd and make it a pain to get into an admin account if you have no luck with cmd try a JDB usb.

haci - April 30, 2012, 12:38 pm

Lmfao everyone was making this test while i was done had like 20 minutes left, tried it and gf everyone lol.. they all mad : P thanks for this.

Famous Grouse - April 30, 2012, 1:49 pm

Many Thanks For This Will Try It Out At The Internet Cafe LOL

A White Hat - April 30, 2012, 1:56 pm

Wow you know how much trouble yu kids probably got into like really that not smart of you kids

Nobody Of Value - April 30, 2012, 2:00 pm

The cmd opens and closes almost instantly, definitely no time to type anything in it let alone see anything that was in it :/

hackingeveryone - May 31, 2012, 1:23 pm

I cant open shutdown -i on my school ;(

phero - May 31, 2012, 5:31 pm

If you guys are using ID's to log into the computers make sure to un-tick the box "Warn users of this operation"

if they're smart enough they'll write it down and then you're fucked.

-Phero

GoldenBullet - May 31, 2012, 5:36 pm

Thanks, Tried it in school and the librarian was like WTF happened!

VERY HQ POST!

God of Hacking - May 31, 2012, 9:34 pm

Can the School Network people know if u did it or not?

MUT4NT - May 31, 2012, 10:11 pm

good job mate, nice tut, thanks for share it

Maor - May 31, 2012, 10:58 pm

Thanks, I tried this option in my school and they blocked it :(

Filthy Frank•??? ? - June 1, 2012, 2:39 am

My school, oh should I say the school I used to go to (Finished a week ago ;)). No matter how you tried running CMD it would say you don't have the privlages and I'm sure that's the same thing in most school

AHMEDB112F - June 7, 2012, 10:03 am

To shutdown or log off the selected computer you will need Lan-Shutdown.

This software is available from the official website or search it on Google.

Then you have downloaded and have installed it you will need the name of the computer. This will

probably be the computer number and the name of the computer room or if you use the shutdown -i command and click browse you will find the IP address of the computer.

Then write the name in the "computer name" and write a message in the "message box" and click shutdown.

Make sure that ...

You tick use "WMI (alternative method)"

and tick "force terminating applications"

scripttbh - June 7, 2012, 11:54 am

Hmm would this work say in starbucks or a airport or a public place like that? would be fun to see everyone's computer just shutdown :D

?mnipotent - June 7, 2012, 12:50 pm

I have tried this and it doesn't always wok with every network. Good thread anyways.

NashisPro - June 7, 2012, 5:42 pm

I might need to try this! This seems pretty C00l

zack334 - June 9, 2012, 10:11 pm

This wont work because the computers all need to have network access to the registry, and most IT's turn that off because they know people will try and do stuff like that. So good luck...

K1l13r-B10cks - June 10, 2012, 1:34 am

If your school has blocked .bat files, you can try making a small VBScript file. If you don't want to learn it, just memorize this

Code Dim Shell,Exec

Set Shell = wscript.createobject("wscript.shell")

Set Exec = Shell.Exec("shutdown -i")and save it as a .vbs file. Good luck!

V1RGUL3 - June 10, 2012, 1:47 am

I think entering

shutdown -m *

in execute does the same thing.

Also, you need admin rights and it shows what PC does it. Bad idea.

-Subwoofer. - June 10, 2012, 2:13 am

You do not need admin rights.

It works fine for me.

Zooplet - June 10, 2012, 5:03 am

I cant open CMD on my school :(

35char35char35char

legendair0 - June 10, 2012, 6:04 am

it doesn't work for me because of admin privileges

Dynasty@HF - June 10, 2012, 6:35 am

didnt even work as i did not have the rights???

d4rk41g0r1thm - August 7, 2012, 10:06 am

thx i tried to do this and it works haaha during a test all pcs shutdown haha thx bro

BlackHat Haxtor - August 7, 2012, 10:14 am

haha this would be so funny to do in my school thanks

mAz3r - August 7, 2012, 10:31 am

Nice tut...

i will definitely try it:)

newbi3 - August 7, 2012, 12:55 pm

If you guys can't open a command prompt and have access to microsoft paint there is a way to execute the command prompt with creating a bitmap image and then renaming it.

German. - August 7, 2012, 2:04 pm

This will also mostly likely get you into a shit ton of trouble...

iCydiia - August 7, 2012, 3:33 pm

I tried this before , admin rights :(

Demn school , going to a new school i will try it there :D

damanXX - August 7, 2012, 4:55 pm

hahah nice guide hopefully some people pull this off at my school

NDNKY - August 7, 2012, 9:18 pm

Is there a way to do this on a Mac. All my school computers are Macs. ?

anonymous2.0 - August 7, 2012, 9:50 pm

i have actually done this before and it worked. it was in high school a few years ago

glo0m - August 8, 2012, 2:17 am

Hey you,

this tutorial looks great, but sometimes you need admin rights to make everything at the school pc.

Maybe you or somebody can show me how I can give me the admin rights ??

I have tried it, but then there is a message: Systemerror 5!

So it will be great, if you can show me how I can give me the admin rights and so on ???

lil_bounty - August 8, 2012, 2:27 am

FUCK YEAH IT WORKED SCHOOL WAS SCARED:D

xSellize - August 8, 2012, 2:28 am

Yes but it works only for some schools

enjoy anyway :D:D

-Subwoofer. - August 8, 2012, 2:31 am

yes its very funny ;D

hahahaha ;D;D

Austerity - August 8, 2012, 2:44 am

My school blocks, notepad + Cmd so how am i ment to do this ?

AnKo - August 8, 2012, 3:39 am

Tried it at school, needed admin rights though. Had I some time alone to get the rights..

piebraa - August 8, 2012, 6:42 am

seems cool, ima try it when school starts again ;D

Mr-Kyle - August 8, 2012, 11:13 am

if you would be able to do this that would be awesome lol

Liamhacks1234 - August 8, 2012, 12:27 pm

I laughed so hard when i saw this post LMFAO

skune - August 8, 2012, 1:00 pm

The Active Directory Domain Services Is Currently Unavaible << I get this when I press browse. Please help! I hate my teacher.

antigrav - August 8, 2012, 1:04 pm

Rofl, my school blocks not only admin rights, but CMD as a whole. You also can't run any .bat files, so the @echo off -> command.com thing wouldn't work. They also have monitoring software on the teachers' computers, so they can see what all the screens are up to.

Rulio739 - August 8, 2012, 1:22 pm

Thanks, I tried this option in my school and it work.

ch3micalburn3d - August 8, 2012, 2:20 pm

this tutorial is useless and pretty much wont work in any network

The Trill - August 25, 2015, 6:38 pm

Can they catch you for doing this

Manipulate - August 25, 2015, 10:51 pm

Dude some kid started pinging youtube.com today in class and teacher walked by and did not give one shit. We could watch porn and he won't give a shit. Imfao

bluedragon123 - August 25, 2015, 10:55 pm

i remember when a teacher would leave their computer logged in on a comp in a classroom pornhub was deffo working haha they can block youtube for the student but dont block porn for the teachers ??? what is this shit

New Order - August 30, 2015, 1:47 am

very useful, going to do this in school thanks for sharing

v0dka - September 4, 2015, 2:44 pm

This will not work on a network setup correctly

first reason

if its part of a a/d domain(active directory) you specify who is admin by permissions, not only this group policy will be forced on every machine on the network.

second reason

this would firstly require local admin and then the knowledge of the other machines local admin account

what you can do... is use a set of tools call pstools create a batch script to shutdown and remote execute it vis pstools as c shares should be enabled

ie. \\computername\c\$

this should allow you to browse the c drive of the networked machine unless group policy has disabled this share or the share has been set to a local admin account

happy hacking ?

Pantomime - *September 6, 2015, 3:15 pm*

Too bad I need admin too create a batch file.

88s26 - *September 7, 2015, 1:09 am*

oh my god i wish i was in school again loooool

this would have been hilarious! i got suspended for changing my grades XD that was 6 years ago

Swanson - *September 7, 2015, 3:33 am*

Nice guide man. Thanks!

One of the pictures you posted is down. It would be awesome if you could fix that.
