popsiclefrog - March 19, 2012, 1:59 pm

I grabbed last week...but everyone is telling me their virus scan is blocking it :(...did you update it since then to make it FUD? I would love another copy, it worked wonders when it did work :D :D great work

Accident - March 19, 2012, 2:03 pm

Is your server FUD mate? That'll influence it..

popsiclefrog - March 19, 2012, 2:05 pm

Yes server is FUD 100%...and I just scanned on element and got 0/37...hmm, strange, oh well...I must not be good at convincing them to accept the java.

TY ;)

Hi people i have set up cybergate and everything is working fine but i thought that i may have made

one of the viruses wrong

so i kept it and made another and when i got home from school someone had downloaded my rat. all good and i was happy but every now and again he comes up again on a new list so i have 3 of the same guy and when i try to delete him it says error between client and server anyone know what this means?

also the last time i set up cybergate when i closed it fully or i shut my computer down it would come back on and i would have no people on my list ?

one more thing when i look at the keylogger all the buttons dont fit on the screen and i can only fit a tiny bit of download on and it happens with quite alot of the windows therefore limiting me to what i can do ?

Please PM me with help thanks for reading !

Accident you've missed me four times, are you just busy or giving to only ub3r and l33t? If you're giving to normals maybe you can give authorization for people who have it to send to others as well? :s Just a thought.
