"HTML Injection" = look for an HTML-input supported forum, and inject dem codes. Which is pointless, and useless. Why would anyone want a mentor for THAT?

Everyone in this thread is closed, so take the hint.

Like the guy above said, it's literally just find where raw input is returned like search bars, and put in your HTML tags, nothing fancy is needed.

I don't get why you guys gotta be dicks about it. He just joined and probably just typed in the search

bar what he was looking for.

And for that i congratulate him.

For not being able to recognize the difference between a timestamp that says 2012 and a timestamp that says 2015-2017, i cannot congratulate.

For not recognizing that everyone in the thread was closed, i cannot congratulate.

I've never been on another form before that says "@closed" when people get banned, so maybe he would think it means "offline". I don't know what he thought, but I'm pretty sure if he noticed the last post in the thread was from 2012 or that the people were banned, he wouldn't have commented. I don't fault him though. He's new. Just let him know for next time that he posted on a dead thread. No need to act as if he is a complete idiot for not realizing it's an old thread.

Check his recent threads... you will change your mind about the idiot.
