Thread: [\[TUT\] DarkComet v5.1.1 Tutorial](#)

Rahul_Rulz - March 21, 2012, 3:13 am

 I know there are lots of Tutorials for DarkComet, But i thought this will help new users for new version of DarkComet.

If you found any mistake, Please comment and for any help, Setup, Crypting. You can PM Me :)

Thank You.

Thanks for time quick TUT, Its really helpful.

cpnm1 - March 21, 2012, 3:30 am

nice tutorial....thanks!!!! thumbs up!

Sheldor777 - March 21, 2012, 4:23 am

Great tutorial. I mean I didn't need it but I hope that it will help somebody!

Sugawara - March 21, 2012, 4:27 am

Nice Tuts,.! There are Millions you are one of them,!

Rahul_Rulz - March 21, 2012, 4:33 am

Thank You, Everyone!

(Mar 21, 2012 04:28 AM)-=Conqueror=- Wrote: [\[CITE\]](#) i'd suggest you to use compress with upx. more small server

nice tutorial for the rest

I tried Compress UPX, But that Corrupt's your server when you crypt with Crypter, Or else if you are not using Crypter, It's good. That's why i didn't suggested that setting.

Looks great. For step 5, when you add your no-ip, do you add in the address or the ip? Like random.no-ip.biz or 149.32.99.84? I put the random.no-ip.biz and not the IP but I don't know if that's the correct or not.

Your NO-IP Host, Not the IP Address.

Because

Quote:If you add your IP Address v4 and if it chances on DNS Flush.

You will lose your Slaves. That's why We use NO-IP Host.
