I have done research and while these where 200\$ they only got 5 stars reviews and they were considered cheap for what you get - Awesome earphones great design and Bluetooth
these are 4 Channel HD Sound! mic on the earphones so you can make calls and use siri. ?
comments ?

Who ever made these did a very good job of making them look exactly like beats but with his name and Logo on them.

Someone should buy a pair and tell me how they sound :P

ilForce - March 21, 2012, 4:08 am

as i said ive done research and every1 says they sound amazing

even a beats studio owner says miikey's are the best headphones he has ever used

Audiophile is not a sound. An audiophile is a person who aims to get the closest reproductions of music to the original.

I wouldn't buy those... Looks like someone whipped these up in a day with cheap leftover beats parts.

If someone bought these for me I'd be happy to do a review then send them back to whoever bought them but I don't even think it's worth the shipping cost.

So you wouldn't but these because you suspect someone a great bunch of beats part and somehow made them sound better with noise cancellation and Bluetooth , and you want someone to buy and send you one for reviews ?

nice ?

GL1TCH3D - March 21, 2012, 4:23 am

I'm only suggesting I review them because all the current reviews are probably like:
'omgz dey sound so gud' says the general moron who knows nothing of good sound quality.

And noise cancellation / blue tooth are just gimmicks. Most passive noise cancellation headphones/earbuds (means no active noise cancellation but good isolation) will do you fine in 95% of situations.

And how would you use the headphones with an amp or dac?

I was just wondering if you knew anything about headphones.

As I said before Ive read only good reviews about these (many of them say there better then beats studio as for music quality) and now there half the price , if your patience i can tell you in exacly 11 days what i think about them (used my bros studio's many times and there great in my opinion [he got these for 150\$ at a sell on ebay])

GL1TCH3D - March 24, 2012, 2:12 pm

Beats have no quality. Saying a pair of headphones is better than beats is like saying a car is better than a go kart. It will always be true.

Rhythm - March 24, 2012, 2:19 pm

I might have to purchase these tbh. They've even got my name on 'em.

Has anyone besides OP purchased these yet? I don't want to buy a pair of \$100 head-phones just to find out that they're the same as knock-off Beats by Dre. I wish these were available for testing in-stores. :_:

Just get a pair of ath m50 for 120\$. At least you know you're getting entry level audiophile sound

quality.
