Thread: [\[VB.net\]Anti-Virus Source Code!!](#)

SIM-297877 - January 14, 2010, 9:02 am

Hello People!, Well about a couple weeks ago i posted me anti virus [HERE](#) And well i dont feel like updating it so im going to give You all the Source Code...

Code Well After about 8hrs and over 5000 lines of code i made a anti-virus, its called xcvPro Anti-Virus and it scans your pc for for the virus then shows you what it is in the box... i will be updating it soon, ill add a bigger database and add a auto scan to it, ummm i posted a small part of the code i used in [HERE](#)

and i gave a small part of it with the program in the read me file.

This was hard to make so i made it so now one can tack the full code, BUT i did give you part of the code so you can make one... I also put some useful INFO in there like "What is a Virus?" and more, this is beta so there are probably lots of bugs but none that will heart you or your computer so it ok.

If you find any Bugs, Problems Please PM me or Post here, so that i can fix them in the next version.I will be adding a Auto Updater to the next one so that you dont have to keep coming back to see if there are updates.

The xcvProVirus.bat file is for you to test the Anti-Virus, move the .bat to you C: hdd and run the scan, you should be able to delete it using the anti-virus. If you dont wont to test it with that just delete it and use the Anti-Virus.

Necrophagist - January 14, 2010, 9:46 am

code has 5 errors

msg 2 short

SIM-297877 - January 14, 2010, 9:47 am

not for me..._____

Neroxan - January 14, 2010, 9:50 am

msg 2 short

when reporting errors its usually good to say what errors were said to be there so the coder has some idea whereas to start debugging them

SIM-297877 - January 14, 2010, 9:57 am

I think its just the Resources, But the code works fine.

xBroak - January 14, 2010, 10:02 am

its very easy to fix....

Go to the properties, add a root namespace ie.. "Project"

Go to the \$SafeProjectName\$ error, Change \$SafeProjectName\$ to "Project"

Mines fine,.

Deathader - January 14, 2010, 12:50 pm

This isn't really an anti virus.

And the code is messy as hell. Import a database, loop through the checking function on each entry, etc. It's easy.

Code For i As Integer = 0 To ListBox.Items.Count - 1

```
MessageBox.Show(ListBox.Items(i))  
Next
```

Buster1995 - *January 16, 2010, 9:27 am*

Think ,

wat pass of archive .rar ?

lastowl - *January 18, 2010, 2:43 pm*

nice for making more for vb

maxpatel802 - *April 27, 2016, 8:02 pm*

multiupload link not working.....can you give second link of download ?

This thread is 6 years old and based off of other comments, it didn't even seem worth downloading...

Try not to gravedig in the future.
