Thread: [Page Viewer \(How?\)](#)

Defrost - March 22, 2012, 3:47 pm

How would I create a page viewer?

So like if i enter the url in the Text box and press go it will view it without using process.start? or do you have to use process.start.

and if you enter a number like 10 it will view the page 10 times and fast?

Thanks, Defrost9

DJ BrU - March 22, 2012, 9:16 pm

You could use the stupid webbrowser control and multiple forms. Or process start like.

```
Code int i;
for (i = 1; i <= 10; i++) {
    System.Diagnostics.Process.Start("http://test.com");
}
```

To view it 10 times.

Defrost - March 23, 2012, 6:37 am

Thanks a lot

and do you know to Hide it so it doesnt show that it is open?

Sho?kwave - March 23, 2012, 6:42 am

```
Code int i = 0;
for (i = 1; i <= 10; i++) {
    dynamic HttpWebRequest = (HttpWebRequest)WebRequest.Create("http://www.google.com");
    dynamic httpwebresponse = HttpWebRequest.GetResponse();
}
```

Defrost - March 23, 2012, 6:57 am

```
(Mar 23, 2012 06:42 AM)Shockwave™ Wrote: \[CITE\] Code int i = 0;
for (i = 1; i <= 10; i++) {
    dynamic HttpWebRequest = (HttpWebRequest)WebRequest.Create("http://www.google.com");
    dynamic httpwebresponse = HttpWebRequest.GetResponse();
}
```

I keep getting an error message with this

ibloodqman - March 23, 2012, 8:14 am

what error do you get? + why are you doing this? = opening your sites in background like ads?

(Mar 23, 2012 06:42 AM)Shockwave™ Wrote: \[CITE\] Code int i = 0;
for (i = 1; i <= 10; i++) {
```

```

dynamic HttpWebRequest = (HttpWebRequest)WebRequest.Create("http://www.google.com");
dynamic httpwebresponse = HttpWebRequest.GetResponse;
}
It's:
Code int i = 0;
for (i = 1; i <= 10; i++) {
    HttpWebRequest dynamic = (HttpWebRequest)WebRequest.Create("http://www.google.com");
    httpwebresponse dynamic = HttpWebRequest.GetResponse;
}

```

KingCobraXD - March 23, 2012, 5:06 pm

Lol. I just used ShockWave's code. Guess I'll have to code this.

Here:

```

Code for (int i = 1; i <= 10; i++) {
    HttpWebRequest dynamic = (HttpWebRequest)WebRequest.Create("http://www.google.com");
    dynamic.GetResponse;
}

```

Defrost - March 23, 2012, 6:31 pm

```

Code WebClient client = new WebClient();
    client.Headers.Add("user-agent", "Mozilla/5.0 (compatible; MSIE 10.0; Windows NT 6.1;
WOW64; Trident/6.0)");

```

```

    for (int i = 0; i <= times; i++)
    {
        Stream data = client.OpenRead(textBox1.Text);
        data.Close();
    }
    Would this work? and it should appear hidden correct?

```

?lassy - March 24, 2012, 9:19 am

Everyone of you forgot that dynamic.GetResponse is a method!

OP:

Add () to GetResponse, like this:

Code dynamic.GetResponse()
