Thread: [Can someone code me a basic program for me \(Involves controlling another program\)](#)

Automatic Coding - March 24, 2012, 9:31 am

I have no idea how to control a different program from without yours, but, I need to do it. Either can you give me the source to an example, or can you code a bot which reads a list of serials off a .txt, then, injects into steam and tries them ALL? Preferably without keyboard presses, considering that'll render my PC useless till it's done.

Well... I tried to throw one together with keyboard inputs and it froze my whole PC... >.>

```
Code private void button1_Click(object sender, EventArgs e)
{
    System.Threading.Thread.Sleep(5000);
    System.IO.TextReader t = new
System.IO.StreamReader("C:\\users\\nicholas\\desktop\\keys.txt");
    string currentLine;
    while((currentLine = t.ReadLine()) != null) {
        SendKeys.SendWait("{tab}{tab}{tab}{tab}+a{del}");
        System.Threading.Thread.Sleep(100);
        SendKeys.SendWait(currentLine);
        System.Threading.Thread.Sleep(100);
        SendKeys.SendWait("{enter}");
        System.Threading.Thread.Sleep(5000);
        SendKeys.SendWait("{enter}");
        System.Threading.Thread.Sleep(100);
    }
}
```
