Thread: [URL SQL injection, POST SQL injection ,COOKIE SQL injection\[What is this?\]](#)

anonbux0 - March 24, 2012, 11:14 am

What is :

COOKIE SQL injection

URL SQL injection

POST SQL injection

If one site is vulnerable to COOKIE injection,URL SQL injection or POST SQL injection, is possible to hack the site..get information,users..passwords?

Thanks for Help!?

Cookie injection I believe is done via tampering of the cookie and inserting SQL statements via it.

URL is simply basically GET SQL injection. Were you insert your SQL statements via the browser.

POST injection you insert your SQL statements via a box on the page, like a login. This is done via adding your statements with Tamper data.

Yeah it's just using SQLi but in different areas. Firefox Tamper Data is what you would want to get as Vince said.

Yeah from what I know. You can also do useragent based injection.
