Thread: [How to block sites](#)

-MaTaN- - March 25, 2012, 8:49 am

step 1 : go to here : C:\Windows\System32\drivers\etc

step 2 : open the "hosts" with notepad.

step 3 : then write example :

Code 127.0.0.1 www.site.com

now, you will see that site like blank or no view..

Mr. Trazy - October 5, 2012, 5:02 am

Bro this is not working!! where to write (127.0.0.1 [www.site.com](#))

BlueRey - October 5, 2012, 5:55 am

HACKER-FUN - October 5, 2012, 6:27 am

it's not working bro

I can't save the file

Mineo - October 5, 2012, 8:23 am

In order to do this correctly, you need to be the PC administrator or have the permissions of an administrator in order to edit the hosts file.

Why?

Because it is a system file and you can disable your internet if you do something completely wrong.

Make sure you are an administrator if you do this.

Ardi22 - October 5, 2012, 10:06 am

Great tut! :D but i alredy knew this ;P

SIM-964740 - October 24, 2012, 4:53 am

Thank you man, I read this a while ago and now Im reading ot again ;)

PS: I am on my phone ao GN isn't active :P

joint56 - October 24, 2012, 6:11 am

thanks man , i try this on this night...

Crosshair5599 - October 30, 2012, 11:40 pm

Just save the .txt file on your desktop. Remove the hosts file, and drag the copy in the directory...

SEANoEv0l - October 31, 2012, 12:03 am

Open Notepad as admin and then drop the file into the notepad window.

ZeusGod13 - October 31, 2012, 12:04 am

well only the main page gets blocked you can access other pages of the site via bookmarks :/

sam2011hacker - October 31, 2012, 1:02 am

very old trick and works perfect. I using this from many months. I myself blocked about 7 games sites. Basically what we need to do is

Quote:1- First open notepad with administrator rights. (you can do that by right clicking on notepad and click run as administrator)

2- Now type 127.0.0.1 www.google.com (atleast 1 space is required between the ip and website)

3- now save it and reboot

4- try to open google.com, you will see its blocked

5- now instead of google type any site you want to block. Done now enjoy

(Oct 31, 2012 12:04 AM)ZeusGod13 Wrote: [\[CITE\]](#) well only the main page gets blocked you can access other pages of the site via bookmarks :/

you just need to find other pages it uses and then block them also. you need to block subdomains also. i know its tough job. So i tell you a software download HT employee monitor it helps you to block the whole site. The only problem is that its a 30 days trial version

szzzer - October 31, 2012, 4:38 am

This is how you can do it from cmd

1 run cmd as admin

2 go to cd windows/system32/drivers/etc

3 etc> copy con hosts

now type 127.0.0.1 www.site.com

then it will ask for overwrite

type yes

then press ctrl+c and enter

4 exit
