You can use the code in his template for your .html page
and upload the jar with it, that would be work good together aswell.

Hi.

I have myself a Java Drive By version which is non FUD. With Avast, I get two threat:

- index.html : Virus JS/Downloader.Agent
- client.class : Trojan Java/ClassLoader

Will yours be FUD and won't be anyhow detected, even by decompressing the JAR file ?

Do you have any idea how I can reFUD mine ?

Cheers Brother.
