Thread: [\[Lib\] UDP Flood](#)

iVision - March 26, 2012, 7:15 am

I wrote this in 10min so it doesn't look professional.

I've wrote this small (280 Line) library because I just needed (for tool that will be released soon) but I thought lets share it and retrieve some feedback. This is library is written for UDP Floods.

Download: <http://dl.dropbox.com/u/44845826/libUDPFlood.dll> (8KB)

How to use:

- Right click project > add reference
- Browse

PHP Code

```
<?php
using UDPFlood;
```

Then for example:

PHP Code

```
<?php
static void Main(string[] args)
{
    Flood flood = new Flood("127.0.0.1", 80, 65000, 1, 10, true, true);
    flood.startFlood();
    while (true)
    {
        Console.WriteLine("Packet: {0}\tPower: {1}", flood.nSecPackets(), Math.Round(flood.
mbPower(), 2));
        System.Threading.Thread.Sleep(1000);
    }
}
```

Thanks for reading.

could you give me the link (new link) this link is not working anymore
thx

zapfen - September 17, 2012, 6:15 am

Hey ;D i also like to have the source code, some problem, link crashed...

Grooty - April 17, 2017, 3:30 pm

Please, Source Code with .dll ?
