Thread: [Paying for VPN business setup | READ!](#)

1337B345T3R - March 26, 2012, 11:37 pm

Hello. I am thinking I am going to setup a VPN company. I have a great server and I just need someone to set it up for me. I need you to do the following: Install the VPN software on server

When done make it so I can create multiple accounts to be accessed through OpenVPN GUI.

Auto-Purchase system, when they hit "buy" on my site I want it to automatically create them a VPN account on my server.

Let me be able to manage all users.

I have 2 tutorials here:

<http://www.techrepublic.com/article/set-up-a-linux-vpn-server-by-following-these-10-steps/6038003>

<http://pctechnic.wordpress.com/2008/08/29/how-to-install-vpn-on-centos-45-in-3-minites/>

but I have no idea how to make it able to auto-create accounts on purchase.

PM or post below if you can do this and how much you want for it!

Hi, nice to see more choices for vpn buyer.

Please note that for the auto-purchase system, be prepared to pay up to USD 500 for such a thing.

I have my personal written 1-click installer shell-script for the rest, but i'm not selling the script without a good price.

Also it's advisable to learn to set one up yourself. Imagine if something goes wrong with the vpn you'll have to scurry back to the person who setup the vpn for you. Not a very good image when client expects an answer asap from you.

Tell me more about this script. Can you install everything except the auto-buy? How much?

DarkPriesT - March 27, 2012, 3:36 am

Hah! I read the 2 vpn tutorial links you posted i can guarantee you that it doesn't work LOL.

Yes, my script does does everything with a single click, but not the auto purchase system. I'm writing one for my own vpn but i'm not sure if its a good idea to implement that auto purchase system into our billing system with the number of fraud cases.
