Thread: [SuperCharge Your Android](#)

Derrick420 - March 27, 2012, 7:43 pm

Sick of ur phone being slow and sluggish at the end of the day? Or maybe you are sick of how quickly your phone dies?

I got the answer for you!

We all know not to use Task Manager apps to close apps.

Use this mod to keep your RAM free on your phone!

I DO NOT CLAIM THIS MOD AS MINE! So if you somehow manage to brick your phone do not come yelling at me!

DO NOT FLASH THE ZIP FILE! RUN THE PDF FILE IN SCRIPT MANAGER!!!!

[SO HERE IS THE LINK!!!](#)

It works on ALL Android devices - Custom Roms or Stock Roms, Phones or Tablets, it doesn't matter!

Requirements:

1. Rooted Phone.
2. Script Manager or Terminal Emulator to run the script. Stock ROMs can also use SM to load up boot scripts!
3. Busybox 1.16.2 OR ABOVE

Installing/Using:

1. Download the attached V6_SuperCharger_for_Android*.txt/pdf script and save to your sdcard. ... Do NOT run the V6 SuperCharger install script at boot!
2. a. Load the script (V6_SuperCharger_for_Android*.txt/pdf) into Script Manager and select "Run as Root" (skull and crossbones "Su" icon - it turns green when selected)
.... b. OR Use Terminal Emulator. Type su and enter, sh /sdcard/V6* and enter (provided you saved the script to the root of your sdcard)
3. Get SuperCharged! Just pick an option! The extra options (Engine Flush, etc.) explain things before doing anything
4. READ the script's output!
5. Afterwards, READ the html HELP FILE in the root of your SD Card!
6. Disable "Lock Home in Memory" if your ROM has this option.
7. Optional: For a quick status check, you can put a Script Manager widget for V6 SuperCharger on you desktop!

If you are using compcache and have lag or slow down after SuperCharging,
DISABLE compcache, wipe caches and re-enable it.

Also make sure to uncheck/disable lock home in memory! (and leave it unchecked)

The above is really ALL YOU NEED TO KNOW.

The V6 SuperCharger Script EXPLAINS EVERYTHING that it does - as you use it!

[Link to my findings.](#)

I CAN NOT PROVE THAT IT WORKS! BUT I CAN PROVE THAT THE 3G TURBO CHARGER DOES HELP MY SIGNAL! CHECK THIS OUT!

Okay so i am using a rooted Droid Incredible 2.
Running Cyanogen Mod 7.2

Here are my findings!

I did a speed test before running the the file.

This is what i got : Download:782kbps Upload:377kbps and Ping:197ms

Now the test after the 1st Setting.

Download:961kbps Upload:133kbps and Ping:173ms

The test after the 2nd Setting.

Download:1605kbps Upload:175kbps and Ping:193ms

The test after the 3rd Setting

Download:1755kbps Upload:309kbps and Ping:175ms

The test after the 4th Setting

Download:1630kbps Upload:147kbps and Ping:218ms

Thus i think Setting number 3 (faster!?) is the most optimal for my phone
btw a link to a screenshot is added if you dont believe me!

AND AS ALWAYS before you do this i recommend running a NanDroid Backup.

I recommend running a NanDroid backup before flashing or doing any kind of mod you your phone!

Have fun! :D

Blackberry boy - March 28, 2012, 10:54 am

thanks a lot dude!!!

keep it up.. nice work!

Derrick420 - March 29, 2012, 8:45 pm

Bump. Anyone try this yet? Any questions? I wanna hear other opinions!
