Thread: [\[hash\] Learn me to crack hashes \[/hash\]](#)

Spitfire - March 28, 2012, 8:06 am

Hello readers,

I have alot of passwords to crack but I don't know how.

I have Cain & Abel but don't know if it works.

Do you have another program to do it under 30 minutes (like 5 letters pass) .

Thanks,

~Spit ?

Yeah but this doesn't work all the time.

But it cracked so thank you my hero! ?

nice .Tim, :p

i searching for long for a crack for md5decrypter

001011001 - March 28, 2012, 10:01 am

Ok, look for zerofreaks hash identifier first. Next, now that you know what the hash is, use an online website to go for it.

Quote:Example: Crypted Password is 93849jsjwoalwjdninfi (Lets just say its MD5 but you don't know yet.)

Run through ZeroFreaks thingy. It will say: (It's MD5)

Step 3, look for an online decrypter. Boom, you have the password.

From what I've seen so far, Zerofreaks machine can indentify 13 different types of hashes.

Use Havij's cacker if you really need one for MD5.

If you where unable to find a simple decrypter like: <http://www.md5decrypter.co.uk> I am supriised because it's top 5 if you just google search MD5 decrypt.

Use Hashcat GUI, it is very good at Dictionary and brute force attacks and can do a lot of different types of MD5 Hashes such as wordpress and a munch of MD5 Salts. <http://hashcat.net/hashcat-gui/>

Cain and Abel: Go to Cracker -> MD5 (on the side) -> Right click in the empty white field after you've clicked on MD5 -> Add to list -> Copy past your hash -> Right click the hash that has now appeared in the previously empty white field -> Click on brute force or whatever method you want ->

Fill in the inputs -> Start -> Profit.

Tutorial can be found on youtube if you just try to search:
