Extra information

I am currently only accepting PayPal.

My MSN is Lemon-products@hotmail.com.

If you have questions please pm me.

. exe - March 28, 2012, 6:01 pm

Big vouch this guy has been working on this for a while.

I've used this and it is easily the best keylogger on HF.

Lemon ? - March 28, 2012, 6:07 pm

Thanks for the vouch. There will be some large updates soon. Currently working on a crypter too.

???LL - April 3, 2012, 3:00 pm

can i take a vouch copy

thanks in advance :D

Mandatory - April 3, 2012, 3:20 pm

Could i get a vouch copy?

I will do a review aswell :)

Anyway GLWS

Pumpkins - April 3, 2012, 3:48 pm

woah this looks hot.

I might save up for this, GLWS!

DeadlyVermilion - April 3, 2012, 3:52 pm

Just wondering, How are you able to call it Java/C++ I'm pretty sure you can't mix languages.

Lemon ? - April 3, 2012, 6:20 pm

The builder is coded in Java and the keyboard hooks/various features are coded in C++.
Not giving away vouch copies right now, sorry guys.

DeadlyVermilion - April 4, 2012, 9:19 am

Not giving away vouch copies right now, sorry guys.

Just going to say this sounds like bullshit. If so how come the output file is a .jar then?

17R0LL - April 4, 2012, 9:59 am

This can also download for example: My rat server and execute it too?

?Ladon Kkc - April 4, 2012, 10:11 am

Vouche for Lemon awesome keylogger mate gl with sales..
i might buy this after youre update :)..

Lysergic - April 4, 2012, 11:04 am

Wow, you sound really dumb. The output file can be a JAR or EXE. Either way he's probably still executing the keylogger the same way.

<http://gcc.gnu.org/java/papers/native++.html>

Code Not all the code in a Java application can be written in Java. Some must be written in a lower-level language, either for efficiency reasons, or to access low-level facilities not accessible in Java. For this reason, Java methods may be specified as "native". This means that the method has no method body (implementation) in the Java source code. Instead, it has a special flag which tells the Java virtual machine to look for the method using some unspecified lookup mechanism.

OT: GLWS bro, looks promising!

Lemon ? - April 4, 2012, 2:18 pm

There are wrappers in Java that allow you to use C++. I'm cool with answering questions, but don't call bullshit without letting me answer.

Just wondering, have you had any experience coding in Java?

(Apr 4, 2012 09:59 AM)17R0LL Wrote: [\[CITE\]](#) This can also download for example: My rat server and execute it too?

Yeah, there's a download and execute option.

Thanks for the support from everyone else!

sabre2ut - April 4, 2012, 6:59 pm

can I use it any email, apart from gmail. DO you accept Liberty Reserve

Lemon ? - April 5, 2012, 1:26 pm

Only Gmail right now, I'm going to add more sending methods specific for each mailing option in future updates (aol, hotmail etc).

I'm in the process of setting up a Liberty Reserve so I may be accepting that soon.

AnGrY Bo - April 5, 2012, 1:38 pm

I would like to buy if you accept moneybookers

Lemon ? - April 5, 2012, 5:44 pm

Now accepting Liberty Reserve and working the MoneyBookers.

sabre2ut - April 5, 2012, 6:07 pm

Now I can buy it, It is already Easter holiday here, will definitely buy it on Tuesday after the holidays. When adding the new method, can you add custom smtp thereby not limiting us to free emails that can be closed at any time. Also, although FUD, is it crypt-able and bind-able.

Lemon ? - April 6, 2012, 1:52 pm

Yeah you should be able to crypt the executable file with most crypters and yeah I'll add more SMTP sending methods.

sabre2ut - April 7, 2012, 12:24 am

Just sent you a private message, please check your PM

. exe - April 15, 2012, 12:51 pm

Bump for this keylogger it's great and thanks for the update!

Epax - May 30, 2012, 9:04 am

Price is a bit high?

I am interested, has anyone bought and played around with this keylogger?
if so what do you think?

Thanks in advance.

lolo08 - May 30, 2012, 9:11 am

It works on mac? If yes please send me a pm.

nondescription - May 30, 2012, 5:12 pm

(May 30, 2012 09:11 AM)lolo08 Wrote: [\[CITE\]](#) It works on mac? If yes please send me a pm.
No this will only work on windows and if i'm correct he's using JNA.

ToXiicPaNda1 - July 30, 2012, 4:32 pm

Why dont you start coding malware for mac?
you will make alot more money, guaranteed.

what else? - July 30, 2012, 5:01 pm

Can you explain why JAVA comes with C++?
You say there is no dependency (.NET) but JAVA dependency is much bigger than .net

Also, If you able to code it in C++, Why did you use Java also?

And what is coded using C++ and what in Java?

As far as I know we don't care how is the builder coded in, all we wan't to know is about the stub.

No offense

Tubz - *September 11, 2012, 5:18 pm*

I agree why didn't you code it fully in C++?

PedroDJ - *November 6, 2012, 7:14 am*

Is this project still alive ?

Thank you!
