Source code of the eMail spammer and spoofer by Sprremix

INFORMATION

Host this script on your host to send an unlimited amount of spoofed eMails!

How does this look like?

Here are a few screenshots

Spoiler [\(Click to View\)](#)

The additional login page: (If you want to share it. It uses a simple PHP script.)

The index page.

Sent 300 emails. No problem!

And within seconds, we received it already! Guerilla mail only shows 20 emails per page.

Gmail/Yahoo doesn't :)

You can also send thousands of mails, to different emails!

Let's see if this works "admin@paypal.com". Will it work :3?

Oh man, what could you do with this :)?

So whats the catch?

I've made this script with one purpose only, and that is testing out how stable and safe email SMTP servers are.

If you think this is something you want, go ahead and shoot me a PM!

What do you get?

- Complete source code
- Support
- Resale rights (+\$30)

How much does it cost?

25USD - Payment via Paypal.
(prices are NOT negotiable)

So what are you waiting for? PM me now!

Additional Note: You host this script on your server.

Huey Mack - *March 29, 2012, 3:27 am*

Why would anyone buy this?

You can find these free all over.

They are dumb to buy this.

Aubretia - *March 29, 2012, 4:10 am*

what TonyM said, there are many free email spammers all over the internet..

Kyle FYI™ - *March 29, 2012, 4:14 am*

This is really easy to code. Not worth \$25.
