djd123 - September 14, 2008, 5:59 am

top 1 doesnt seem to work

mrhiggins - September 21, 2008, 1:52 pm

how can i get the booter to work it just seems to spam bats and lag my computer

-spider- - September 25, 2008, 3:15 am

Turn off YOUR emotions.

Mr.Blank3 - September 25, 2008, 4:23 am

the spammer is working for me tho -.- but it kinda slows your computer abit down for abit but nice post n thanks for sharing

-spider- - September 25, 2008, 7:16 am

Thats because most of them are made in vb6, for a faster and better booter you need one thats coded in autoit or c++ for exmple.

Nero - September 25, 2008, 1:36 pm

A simple spammer made in VB would work, would it not?

-spider- - September 30, 2008, 7:07 am

It might do if there useing an old computer or older versions of msn.
Otherwise all its going do is lag there comp real hard. If they sit back for a few mins then eveything will return to nomaly, giving ur victim time to block you.

What we really need to boot someone is an booter that opens all the victims chat windows all at once. (Think thats how yahoo booters work)
