Thread: [\[Under Attack\] 10K+ Websites Infected In Ongoing Mass SQL Injection Attack](#)

Mr.Phoenix - April 4, 2012, 3:26 am

Security experts of Webroot has confirmed that another mass SQL-Injection attack is currently underway. According to the blog post of Webroot "Hundreds of thousands of legitimate web sites are currently affected in a a mass SQL injection attack that has been ongoing for the past several months. The ongoing mass SQL injection attacks, are directly related to last year's scareware-serving Lizamoon mass SQL injection attacks.

The cyber criminals behind it, are automatically exploiting the legitimate web sites, and embedding a tiny script on the affected pages, abusing an input validation flaw, or exploiting vulnerable and outdated versions of the web application software running on them."

hjfghj.com/r.php – According to Google, 323,000 sites are affected

fgthyj.com/r.php – According to Google, 390,000 sites are affected

gbfhju.com/r.php – According to Google, 74,200 sites are affected

statsmy.com/ur.php – According to Google, 3,080,000 sites are affected

stmyst.com/ur.php – According to Google, 1,320,000 sites are affected

Earlier in 2011 we have also seen such scenario when 614,000 webpages compromised with mass ASP.NET Infection, also Willysy malware Infects More than 6 Million WebSites, Lilupophilupop Attack took 1 Million+ Web-pages and so on. Even in last month we have seen more than 200,000 websites get compromised with fake anti-virus exploit

Google Dorks:

Code hjfghj.com/r.php

fgthyj.com/r.php

gbfhju.com/r.php

statsmy.com/ur.php

stmyst.com/ur.php

????

supracontra - April 4, 2012, 4:20 am

This happens all the time, seems to affect Windows the majority of the time probably due to the ease of OS level access through the SQL daemon.

Anyway, old news is old.

IDrinkMooMooMilk - April 4, 2012, 4:25 am

Nice, but this isn't SQL?

This more is just an html code that's being injected in tons of websites?

supracontra - April 4, 2012, 4:31 am

The HTML is inserted via SQLi.

I may look into doing something similar in fact, looks interesting.

Mr.Phoenix - *April 5, 2012, 2:13 am*

Hmmmm :) well :-) i think this will lead to an big attack :-) :-)
