What's the problem with ElementScanner, why are you acting as a Police man which one to check everything, do something, code something to check it, do not ask people everytime to check them :P

Kill4joy KJ-Vulcan Tools - April 6, 2012, 9:49 am

We sell an API key, one per product. If he was using element scanner, he was using it illegitimately. As the Element Scanner admin, I have to make sure that people are not abusing their API keys by using it on multiple products or giving it out to their friends. Additionally, I have every right to do this, just as a crypter seller has the right to make sure users are using the crypter for a crypting service.

I am sorry for the confusion, and if you are using scan4you that is ok, PM me if you are interested in buying element scanner (we are cheaper than scan4you).

Looks awesome, i think i will buy it...but some questions:

How long is the stub/crypt FUD ?

Do you think its better than icrypt gold`? (bought it but not good support)

How long do you think the Crypter will stay alive?

Thanks in advance!

- The crypt will stay FUD for 2 weeks or more I think.

- iCrypt has alot of features compared to my crypter but you won't be disappointed by the support.

- It depends on how many clients I get :)

Thanks for the fast answer.

I think i will buy it till next week..

PMing u then, i hope its not overused, because of the newbs they scanning it on virustotal or something and shorten the FUD time.

Cheers

I might buy this, still waiting for some more reviews. As of now though, this crypter has my attention. :)

Oh, and by any chance do you need an extra reseller / support person?

Joker25 - April 13, 2012, 5:13 am

This is really great.

No need to wait for any license approval...

Everything goes automatically after paying.

Nothing against Cryptex, the crew always gives their best, support is grea too.

But fact is (for me), I couldn't even get 1 fud file after 2 weeks, spending hours trying tons of injection methods etc...

With that Crypter I can choose any settings, always 0/37 :)
4th dimension, I'm very satisfied and hope that you keep this project alive for a long time :)

Yes, it has a .NET Framework 2.0 dependency, 85% of the PCs have this installed.

I know the sweet talk bro, I've seen the statistics. I'm just curious of how you successfully integrated a legit USG into a .net app? Pretty sure this is impossible, i have programmed in .net for many years. I am not flaming or anything along those lines, so don't take it as such, maybe the developer is a .net god, who knows. Is it possible to give a run-down of how the USG works?

Okay, if the USG is legit then you could easily sell this for more. Price is pretty good looking and from the vouches, seems like a good crypter. Keep it up and good luck with sales.

IMHO, this needs more features. Maybe some unique features that no other .net crypter has. Something that makes this crypter better than the others out there for sale. Something special. That zing is what is needed these days :D

Please do not treat my comment as flaming, sales trashing or in any way disrespectful. Just stating my humble opinion.

For the first time in this thread I completely disagree with you, We have all the necessary features such as crypter, binder, assembly changer, icon changer and built in scanner and we only charge \$15 and unlike the other cheaper priced crypters here we provide friendly free support. What is the point in adding unnecessary features that are unneeded.

I agree with the fact that you have all the necessary features. I can't argue that. But I was suggesting something unique to be added to your crypter. Something that makes it special from all the other crypters, it would be interesting to see that.

That's what one bonus from a unique feature.

Almost all* .net crypters for sale and public have all the same common features. It would be nice to see something different.

*= I know, not every .net crypter is the same. But a majority, keyword here MAJORITY, are alike in terms of code, features and etc.

L0l every AV is gonna block a crypter. My Norton blocked the crypter i just put it into the safe box on my AV. Don't be worried it's not Backdoored, i always check my startup after i download suspicious programs and i never get any new start-ups so you're fine.

For some reason the scanner on Dimension Crypter for me won't work :(can someone help me?

The Scanner does not work for me neither since the 2.0 Update.

Also i can make a FUD Stub but when i generate a Server.exe of my Bot it gets detected. I think its because of the EOF Data that gets added. Is there a way to crypt my Server.exe without corrupting it?

[img]<http://shareimage.org/images/qk9xrjs2uj05rdkt9tad.png>[/img]

Tips and Improvements:

?Add at least file Persistence.

?Clone Assembly Info button.

?The Hide option hides the file from the original running location and also from the location where is dropped, it would be cool if there were two separate options.

?The start-up name in Windows XP is bugged.

Good Crypter to be honest!

Hi,

Firstly in Dark Comet :

1. Network tab: add your DNS and Port
 2. On Start Up tab make sure it is UNCHECKED
 3. Binder - off
 4. Icon: No Icon
 5. Key-logger - optional
- And then build your server

Secondly in Dimension Crypter:

- 1.Browse for the server you just created
2. Check start up
3. If you want to bind, check and open the file location of the file you wish to bind
4. Do all extra options such as: Extension Spoofer, Icon Changer (optional)
5. Press random assembly
6. Crypt

?

I can't call crypter coded in .NET Great , even if it's FUD. FUD = Doesn't mean anything , it takes 10 minutes to REFUD any .net crypter source. Real work is much harder.

GLWS anyway.
stop trolling for no reason. No need to even post....

Dr.Pepper12 - May 24, 2012, 9:12 am

(May 24, 2012 09:00 AM)penor1337 Wrote: [CITE](#) No one is trolling here, you are obviously .NET kiddie. I think important things for you are

1. A lot of NOT needed features , very big amount of them (Like in 2012 crypteR and 90% of other HF crypters) . These kiddie features are making crypted file BIG and Aggressive in the system. Which causes much more HIPS and other smart-security detections.

2. .NET Dependency - UB3R L33T .NET DEPENDENCY !!! NOWDAYS .NET IS INSTALLED ON 99% OF PCS!!! Seems legit ???

Whats Important for me :

1. Clean Code
- 2 . Small stub size
3. Maximum Difference between stubs (USG?)
4. No dependency's
5. No 100500 USERS at once. Causing a lot of problems.

This is difference between GREAT and .NET crypters.

I think your just being an idiot for no reason.

heres the way i see it:

1. Does it work? - Yes
2. Is it FUD? - Yes
3. Is it simple to use? - Yes
4. Does it look clean? - Yes
5. Do i care what language its coded in? - No
6. Are there better ones out there for the same price? - No

So how about jog on and stop trolling :)

Also, please explain why im a .Net kiddie? Is it because i use programs coded in .Net? LOL

Nice update! It looks and runs smoothly. It's also currently FUD.

Best crypter out there. :)

dizzy42089 - June 11, 2012, 12:27 pm

I love this crypter ! One question what settings for full FUD for darkcomet ? Any help is greatly apreciated

The new update looks amazing I really like it :P

The new update is amazing. Although I have a suggestion. The transition effect between each tab should have an option to enable to effect or not, it's sorta annoying. Otherwise, great job on the update.

Big Vouch for these guys! Dimension Crypter is amazing! Keep up the good work guys!

My output for the file is 0/37. Your settings are wrong.

Is entry into RunPE a must or it can be left blank too? I want the injection into default browser, but there is no such option.

Inject into iexplore.exe

Do you see where it says svchost.exe? Replace that with iexplore

xKaws - June 11, 2012, 9:15 pm

I tested it with somebody and whenever they try to run the exe it say they dont have the right permissions.

kambatta - June 12, 2012, 12:09 am

(Jun 11, 2012 09:02 PM)Advanced™ Wrote: [\[CITE\]](#) Inject into iexplore.exe

But what if Internet Explorer is not the default browser? If someone is using firefox or chrome as their browser, they will end task the iexplore.exe

Anyone else having this issue -

I execute the server after placing it in Application Data. It connects at that time and maybe the next time when the system is restarted, but after that the server size changes to 34 kb and it no longer connects. The original server size was 207 kb. It happens to me all the time. My Blackshade server has .NET settings and startup enabled on crypter.

The icon changer doesn't change the icon over skype. Can you please fix this?

Oh and can you make this so it doesnt require any dependencies?

It's not a programming language limitation.
It's just "Windows".
Apps: .exe, .scr etc, will always show the generic application icon over IMs

This crypter is FLAWLESS. It does not corrupt my file and is fully FUD on the first shot using the correct settings. For anyone looking for a crypter that works 100% of the time, is reliable, and does not corrupt your server THIS IS IT. Just wanted to leave my review and VOUCH for this crypter because it's the best crypter on HF.

Yes it did help, but I already knew those settings. I thought I was doing something wrong because of the errors I receive when I run it in sandboxie. Now, if only I knew a great way to spread it would be even better.

(Jun 12, 2012 05:22 PM)jonjosh Wrote: [\[CITE\]](#) Can somebody post the correct settings with DarkComet RAT?

1. Add file to startup
2. Inject into explorer.exe
3. Randomize assembly or use a HQ assembly & a icon if you also wants to bind your file.
4. Crypt!

Works flawless for me on DC 5.2/5.3, Blackshades NET and even with Emissary RAT.

So good job! :-)

Vouch! Amazing looking crypter, very cheap comparably and the auto-buy is amazing. I'm glade I bough this crypter!

PyroStorm - June 12, 2012, 6:25 pm

How strict is the term against crypting services? If my friend asks me to crypt his RAT, am I not allowed to?

Also, does this have a .NET dependency?

This is a great crypter! I have used it for quite a while. Recently I had to reformat my computer, so I lost this crypter. I contacted 4th Dimension and I had the crypter and all my info back the same day! Also, the new update to 2.4 is great! If you have the money, buy this crypter!

Crypting services are strictly prohibited even if it's for your "friend", sorry.

As far as I know it's C# not VB.NET. But you should already know that since you manage his sales.

Injecting to explorer.exe will most likely lead to system crashes. Try something else.
