Thread: [Cerberus Problem ? + used search button](#)

adware - January 18, 2010, 6:21 am

Well i done all porforwarded to the default port,and check is it open,and it is opened.Maked my server FUD,scan it on novirusthanks.org and its 0/23.Now i tested it on my friend and it doesnt worked.Is this problem may be because he is behind router and network.and is Cerberus can connect to those who only got WAN IP or no . Thanks in forward ? anybody,plz help !

toooooo short

Try testing it on your self. When you do, a window will pop up saying that you are the cerberus client. By pressing ok the server will be uninstalled from your computer.

If you want me to try and help pm me and I can go on team viewer.
