I personally hate defacing -when people target a random website- just because they could shell it and put an index file, it's completely pointless - in my opinion.

So i wrote this tool for people that have a purpose of defacing a website.

It's basically a shell script that will be executed in the background and will deface a website When you want just give it a date , and with the option that you want.

[+] DEFACE:TO DEFACE a WEBSITE (you need to specify the path and the URL of your deface)

[+] DUMP:TO Dump files and databases to your dropbox (you need to specify the path and database credentials)

[+] MAIL:TO Send you a mail once the deface is done

-The Black-Hat edition will be released Tomorrow , and i will send it to people who helped me testing and they know themselves :D

-I will give an other copy to the one who can make a video/written tutorial and send them to me !

-If i found this tool leached somewhere else i will discontinue updating and will keep it private !

Chrono deface is hosted on Google code , download it from here

Thanks mate :) , hope hosting companies don't hate me for this lol

Techie??? - April 7, 2012, 8:57 am

Glad that I tested it for you. :)

People, this tools works great and is one of the best scripts you can find. :)

Cometfire - April 7, 2012, 9:21 am

This looks pretty cool. You can set the deface to go up on, say, April fools, just to screw with them.

joomlafkr - April 7, 2012, 10:21 am

well , the real aim is to hide your activity and don't bring suspicion , so the admin can't find you on Logs.

the "April fools" may work too :p

There is a "HOWTO" textfile in there !

I Hope that someone can make a tutorial about it , i'm Mega-super busy those days :/
