Thread: [Secret Converter - Hide your files](#)

Dbof - January 20, 2010, 10:19 am

I would like to present you my new program:

Secret Converter

What it does:

It makes the files of a chosen folder inaccessible. So it's possible to hide these files without having to use the "hide file" - option in Windows.

How it works:

Ok, here a quick tut:

Create a new folder. Name it how you wish. In my example, i will name it "secretf".

Start the "SecretCoverter.exe". The following window will appear:

[img]http://img64.imageshack.us/img64/8217/screen1qx.png[/img]

Click on "Choose Secret Folder" and select the folder you created previously ("secretf").

When a folder is selected, the path will be shown under the button.

Now choose an item in the list you want your folder "to look like". For my example, I chose "Control Panel".

Finally, click on "Convert".

Now your folder will look like a shortcut to the Control Panel. If you try to open the folder, you get "redirected" to the Control Panel in Windows.

But your files are save. Just go back to the SecretConverter and click the first button. Choose the secret folder you can't access now.

Choose the last item of the list, "Normalize". Now click convert, and your folder will be normal again.

Here a view of the changes:

Please let me know what you think about it and post bugs if you find any.

Zas Zero - January 20, 2010, 10:37 am

Hey Dbof, nice to see your program! I like it alot.

But when you hide your folder it gets this name
"name.{20D04FE0-3AEA-1069-A2D8-08002B30309D}"

Is there any way to hide {numbers}? I tried to, but then the folder went back to it's normal state ofcourse, hehe.

Dbof - January 20, 2010, 10:40 am

What OS are you using? I tested it with XP and Vista, and there were no numbers to see...

?Cooldude? - January 20, 2010, 10:45 am

WOW! Very Nice. Thank you for sharing.

Zas Zero - January 20, 2010, 10:53 am

Hmm, that's strange. Maybe it's because I've enabled to see SuperHiddenFiles, and these {numbers} include in those? Perhaps SuperHiddenFiles and View system files isn't the same after all? Hehe I might be wrong.

I'm also using Windows XP. (Professional with SP3)

the_shadows - January 20, 2010, 11:03 am

@ Zas Zero

I don't think those numbers can be removed. These are CLSID (class id) of special folders in window like, {21EC2020-3AEA-1069-A2DD-08002B30309d} for control panel.

The same secrecy can also be obtained by a simple batch file (not made by me)

```
cls
@ECHO OFF
title Folder Locker
if EXIST "Control Panel.{21EC2020-3AEA-1069-A2DD-08002B30309D}" goto UNLOCK
if NOT EXIST Locker goto MDLOCKER
:CONFIRM
echo C:\
set/p "cho=>"
if %cho%==y goto LOCK
if %cho%==N goto END
echo Invalid choice.
goto CONFIRM
:LOCK
ren Locker "Control Panel.{21EC2020-3AEA-1069-A2DD-08002B30309D}"
attrib +h +s "Control Panel.{21EC2020-3AEA-1069-A2DD-08002B30309D}"
echo Folder locked
goto End
:UNLOCK
echo C:\
set/p "pass=>"
if NOT %pass%==passwordhere goto FAIL
attrib -h -s "Control Panel.{21EC2020-3AEA-1069-A2DD-08002B30309D}"
ren "Control Panel.{21EC2020-3AEA-1069-A2DD-08002B30309D}" Locker
echo Folder Unlocked successfully
goto End
:FAIL
echo Invalid password
goto end
:MDLOCKER
md Locker
echo Locker created successfully
goto End
:End
```

this will create a directory in the same folder where you can keep your files and again you can lock it by clicking the batch file.

You can change the folder to other window folders like inbox,recycle bin.Just change the CLSID value.

Dbof - January 20, 2010, 11:12 am

(Jan 20, 2010 12:03 PM)the_shadows Wrote: [\[CITE\]](#) @ Zas Zero

Right, but Windows doesn't show them by default.

Quote:Hmm, that's strange. Maybe it's because I've enabled to see SuperHiddenFiles, and these {numbers} include in those? Perhaps SuperHiddenFiles and View system files isn't the same after all? Hehe I might be wrong.

I'm also using Windows XP. (Professional with SP3)
Tried with another type to convert to? Tried to disable SuperHiddenFiles?

I edited the first post and put an image of the changes...

Zas Zero - January 20, 2010, 11:17 am

Hi the_shadows. Hmm, I see. AH! Lightbulb over my head I think I know why I see the numbers. I've disabled "Hide unknown file extensions", so I always see what kinda file it is. I'll try with that enabled (It's enabled as standard). brb

No. That wasn't it. The {numbers} still show. I'm clueless then.

That's a cool batch code btw, but I guess I'd stick with Dbof's program because it got a list over all possible CLSID values. Thanks for sharing it though :)

Kenny20 - January 20, 2010, 11:18 am

Cool program

too short

Zas Zero - January 20, 2010, 11:20 am

(Jan 20, 2010 12:12 PM)Dbof Wrote: [\[CITE\]](#) Tried with another type to convert to? Tried to disable SuperHiddenFiles?Yea I tried other types too, the numbers still appeared. I'll try to disable ShowSuperHidden and edit this post in 5 mins. (Need to restart computer for it)

EDIT: Yeah, it works now. So apparently ShowSuperHidden (or "View system files" in folder options) can see the {numbers}. Too bad :/ But hey, as I mentioned in my thread, most people don't use that so I guess we're good :)

the_shadows - January 20, 2010, 11:33 am

@ Zas Zero

It seems that you have unchecked the "Hide protected operating system files".

And btw you can get all CLSID just google it.

Zas Zero - January 20, 2010, 11:40 am

(Jan 20, 2010 12:33 PM)the_shadows Wrote: [\[CITE\]](#) @ Zas Zero

(Jan 20, 2010 12:40 PM)Zas Zero Wrote: [\[CITE\]](#) Yea the_shadows, it works after I turned it off.Ok, good to know it's solved. ?

Sho0ter - January 20, 2010, 1:16 pm

Good tool man....thnx a lot...

dasefx - January 20, 2010, 3:09 pm

very nice thanx

.....

wataah - January 20, 2010, 5:02 pm
wtf, idk but this doesnt even work....

Vexslasher - January 20, 2010, 5:09 pm
would be a nice tool but I have to keep my extentions visible because I deal with a lot of coding and stuff that requires me to keep them visible so I guess I wont be using this tool, I tried had same error as Zero. Ty tho.

vampiro - January 20, 2010, 8:59 pm
waaaahh...how can i retrieve my files LOL

zer0day - January 20, 2010, 9:00 pm
Thanks Zas Zero, i like!

vampiro - January 20, 2010, 9:06 pm
yes thank you it works hehehe

You forget we are talking about folders, on my computer i see the extensions of all files and it works, too! You don't need to hide the extensions, but the "Hide protected operating system files" option being enabled. And this option includes all windows files marked with "s" (System).

optiikzz - January 21, 2010, 7:34 am
Nice thank you for this

-Hex- - January 21, 2010, 8:55 am
cool program try improving it to have more options but otherwise very nice

Dbof - January 21, 2010, 11:38 am
(Jan 21, 2010 09:55 AM)mini lolocaust Wrote: [\[CITE\]](#) cool program try improving it to have more options but otherwise very nice
What sort of "more options" ?

Dbof - January 22, 2010, 11:43 am
Any idea for more options? bump

vampiro - January 28, 2010, 10:54 am
how can i retrieve files...cuz i accdentally dleted the secret convrter and i i dloader another..i believe that some of property of it was lost...please help

Dbof - February 2, 2010, 9:02 am

What do you mean by "retrieve files"? Download it again, if you deleted SecretConverter...
I don't understand the final part of your post...

Dbof - February 6, 2010, 1:10 pm

No answer yet...keep waiting for replies ?

vampiro - February 6, 2010, 6:53 pm

what i mean mate is the folder that i have hide couldnt be normalized because when i try to find that file in a secret converter ,,it dont appear to select and to be normalized

Dbof - February 7, 2010, 2:19 am

Ok, could you say me what sort of conversion you used in the program to make it hidden? ?

Shottingham - February 7, 2010, 5:41 am

thanks! workin great...

Dbof - February 7, 2010, 6:15 am

(Feb 6, 2010 07:53 PM)vampiro Wrote: [\[CITE\]](#) what i mean mate is the folder that i have hide couldnt be normalized because when i try to find that file in a secret converter ,,it dont appear to select and to be normalizedOk, here's the solution. I added a drag&drop function, so you can pick your converted folder and drag it into the window, so it will get selected.

Download link was updated! Look in my [first post](#)!

Dbof - February 12, 2010, 3:27 am

Since I cannot update my first post, here is the download link to the updated version. I fixed a bug that caused a crash of the program.

Bump! Maybe it's useful to others...

GodWall - March 14, 2010, 10:20 am

cool your program looks nice I usually use a blank icon and rename it by pressing ALT 0160, been working well 4 long time, so my question is how it this better than that?

Dbof - March 14, 2010, 10:45 am

(Mar 14, 2010 10:20 AM)GodWall Wrote: [\[CITE\]](#) cool your program looks nice I usually use a blank icon and rename it by pressing ALT 0160, been working well 4 long time, so my question is how it this better than that?

well, yours is so easy to detect, just CTRL+A (selects all files). Then you'll see the folder...?

My method is easy and effective, and it shows another folder content if you open the folder ?

hacker300 - March 14, 2010, 11:18 am

hm.. this looksmore like a icon changer,

F.B.I Agent - *March 14, 2010, 11:47 am*

Nice program there fella, good luck.

Dbof - *March 14, 2010, 12:40 pm*
