Ultimate Keylogger Guide

Keylogging is the practice of tracking the keys hit on a keyboard, typically in a covert manner so that the person using the keyboard is unaware that their actions are being monitored.

Thanks for the great post. I'm already finding it useful.

What is your favorite keylogger?

Do you have tips to remotely install on a target computer? I would like to try it.

My idea is to zip a bunch of .jpg's that I know the target will want and email it. Will opening the zip file successfully install the software on the target computer without the user knowing?
