Thread: [\[Shelling\] Joomla - Noob friendly](#)

HaxOr? - April 15, 2012, 3:22 am

Hi all!

Today i'm going to show you how to upload shell in Joomla software.

You will need:

- 1) Admin access to Joomla panel
- 2) Any php shell

Okay,so go to Extensions -> Template Manager

[img]http://img41.imageshack.us/img41/4539/regiondm.png[/img]

Once there you can edit any template as you wish.

Pick one by clicking the checkbox and then click on the name of the template.

[img]http://img28.imageshack.us/img28/3690/regionif.png[/img]

In there you can see if you can edit that template you choose.

[img]http://img803.imageshack.us/img803/3526/regioneg.png[/img]

If its writeable click "Edit HTML" if not choose another one.

[img]http://img688.imageshack.us/img688/4400/regionrb.png[/img]

As you can see,it's editable so paste your shell in there.

[img]http://img51.imageshack.us/img51/6673/regionyo.png[/img]

Now you just need to access your shell (You have path of the template)

[img]http://img194.imageshack.us/img194/3671/regionw.png[/img]

[img]http://img84.imageshack.us/img84/8726/regiono.png[/img]

That would conclude our short tutorial...

If you liked it i will make one for WordPress,just let me know.

o-cobra-o - April 15, 2012, 3:38 am

Wow

nice tutorial thank you for shearing

HaxOr? - April 15, 2012, 4:13 am

Thanks for the support o-cobra-o! ?

Sw1x - April 15, 2012, 4:15 am

Nice neat little tutorial, the hard part is to get the admin access. ^^

The Ion - April 15, 2012, 4:21 am

Now haxor Powers his shit once again with a Epic tutorial good job dude

RIPPER - April 15, 2012, 4:55 am

Nice one...We'd surely be happy if u showed us the various joomla exploits here and made one abt wordpress too

turbofreak2010 - April 15, 2012, 5:11 am

Great tutorial, helped me a lot.

Thanks.

HeXagone - April 15, 2012, 6:18 am

Great work my friend :)

Great tutorial ;).

Some questions :

With this method you gain access at all of website hosted on Joomla server ? Or just server who host Joomla's website ?

HeXagone - April 15, 2012, 8:36 am

when you upload the shell you can Root the server or symlink that will help you access on all the websites hosted on the same server

Hooded Robin - April 15, 2012, 9:01 am

Nice write up Haxor, love the pretty pics :p

conan_1 - April 15, 2012, 9:15 am

Always great shiit from Haxor.

I was asking myself if I we can still find a good members here in HF, but now I changed my mind. :D

Thanks all.

And there is some good and HQ members around here... ;)

b001ean - *December 16, 2012, 2:41 am*

Very nice tut man! Your tutorials are always great!! Thanks for sharing.

Apple J4ck. - *December 16, 2012, 3:21 am*

Another amazing tutorial , Thanks ;3

5 stared.

pashabiceps - *December 16, 2012, 3:52 am*

I love how at the end, there's that hot chick. It just makes the tutorial even better :3

kalandershihabrocker - *December 16, 2012, 4:45 am*

oh yeah... i remember you had thought me this long back! great tut!

Light Yagami. - *December 16, 2012, 6:48 am*

nice tut i am learning more and more
