Thread: [Free Internet trick through AIRTEL ISP-Detailed Tutorial](#)

war8lck - April 21, 2012, 1:38 pm

-----Airtel Internet for free-----

Hello Guys , Today I'm going to post a tutorial on Airtel free Internet using your-freedom client.
All you need to do is to follow the below steps and you get 65kbps speed for free.
Otherwise you can Create multiple user accounts using fake mailserver like 10minutemail.com (click <http://10minutemail.com/>) and login to your account wait for 15 min and select your free voucher and get Free Internet for 1hr more than 20Mbps+ (On total freedom voucher)

step 1: Download Yourfreedom client from mediafire <http://adf.ly/6xquQor> you can do it from official site,<http://www.your-freedom.net/downloads/>, and install it (Windows full installer 13 MB)

step 2: Register at <http://www.your-freedom.net> and login to your account.

step 3: Open the your freedom client and click>>Configure>>server connection
address : 203.115.112.5 (or) fb.me (or) mocricket.com
port : 80

step 4: Goto configure>> proxy settings
proxy address : ems19.your-freedom.de
port : 80

If this dosent work then change 19 to any number between 01-35 (01,02,...25,26...35)

step 5: Goto config>> Account information
Fill your Id and Password

step 6: Goto ports tab on your Yourfreedom client and Enter Webproxy as 8080 and check it.

step 7: Save all those settings and Exit

step 8: Goto your browser enter proxy settings as 127.0.0.1 and port as 8080
path for proxy in Mozilla firefox
Tools>>Options>>Advanced>>Network>>Connection(settings)>>Manual proxy>>Http>>step8

Note :

You can get 1hr free voucher at your-freedom.net>>Accounts>>Try before You buy.

Click here to view a video tutorial on youtube <http://youtu.be/pg4ZZ78esE8>

Important Note :

Use Uninstallers like Rivo Uninstaller <http://www.revouninstaller.com> Because it cleans your registry files also don't leave any traces so that Your-freedom cannot find that you are using multiple accounts.

war8lck - April 23, 2012, 8:37 am

Guys it took me 5 hrs to make this tutorial, It don't even take a min to post your feedback, and post here if any problem arises.

Small correction it is not 20mbps it is 2 mbps

iCydiia - April 23, 2012, 9:57 am

Lol .. why do i need this ?

If i want to change my ip i just use a VPN .. no need of making 1 hour accounts .

war8lck - April 23, 2012, 10:01 am

It is applicable for Computer's only you have a lot more for Phone.Use Google to get them.

M31ST3R - May 6, 2012, 5:35 am

Is this for Airtel in India?

Does it actually work? I think this is some major bullshit!

war8lck - May 6, 2012, 7:59 am
