Thread: [\[Tut\] HackinG Start Button And Welcome Screen in Xp Noob Friendly\[/TuT\]](#)

Infinity. - April 23, 2012, 10:41 am

I was wondering to make a thread on a whim so decided to make it
Let Start..

You'll need 3 Things xD

1: ResHacker you can get it from [Here](#)

2: Little Mind

3: A cup of coffee

1 firstly open up Resource hacker , it should look like these

Spoiler [\(Click to View\)](#)

2 Now Open Explorer.exe file from open menu of Resource hacker. File is in
C:\Windows\Explorer.exe

It should look like this

Spoiler [\(Click to View\)](#)

3 Now Expand "String Table" and in there "37" click on '1033'

Like this

Spoiler [\(Click to View\)](#)

4 Now Where Start is written , Replace it by any name of your liking and press "Compile Script".
Like for instance "HF"

Spoiler [\(Click to View\)](#)

5 Now save it in the same folder that is Windows with any preferable name , for instance 123.exe

Spoiler [\(Click to View\)](#)

6 Now we need to make changes in registry entries in order to get the name 'HF' on Start button
Click on start and run , write 'regedit' and press enter

7 Expand to here

Spoiler [\(Click to View\)](#)[IMG]https://i.imgur.com/FADu0.png[/IMG]

8 Now where you can see written as

Shell REG_SZ Explorer.exe

Double click on Shell

under the caption "Value data" Replace "explorer.exe" to "123.exe" which we just made it.

Spoiler [\(Click to View\)](#)

9 And finally success ? ? ?

See the start button now become HF bar :P

Spoiler ([Click to View](#))

9 Have a cup of coffee and relax.. ?

10 Now again open ResHacker And open Logonui.exe file from C:/Windows/System32/logonui.exe

11 Expand String Table --> 1--> 1033

And under the 7th line there will be 'written' Replace with with whatever you like ..Take for instance "HF My Life " and then compile it

Spoiler ([Click to View](#))

12 Save it and name it for stance "Hf.exe"

13 Now once again got to the same registry entry where we made changes of explorer.exe and in the entry

UIHOST REG_EXPAND_SZ logonui.exe

Double click on "UIHOST" and replace "logonui.exe" with "Hf.exe"

Spoiler ([Click to View](#))

And thats it , you can log off and log in to see necessary changes..

It took me about an hour to contribute this thread to this community

Please keep it alive..

P.S Apologies if this has been posted here before..

William - Future Hacker - April 23, 2012, 1:07 pm

I've seen this in an E-Book before and I've had the E-Book for quite some time? Anyway, Some parts were they exact same like the beginning but a few bits changed during it.

Anyway, If this is all your work and you typed it out thanks op :) I've done this before and it works just so people know!

Infinity. - April 23, 2012, 1:55 pm

Thanks bro and i haven't copied pasted.. its all my hard work..

MegaMormor - April 23, 2012, 3:35 pm

Thanks man! This is pretty cool :D Well done!

bad - April 24, 2012, 12:49 am

That's a nice one . Thanks a lot my intelligent boy :)

enanobp - April 24, 2012, 1:37 am

thanks!

this is a very nice tutorial!

ORK24 - April 24, 2012, 3:16 am

Thanks (:
nice tutorial I will try it out.
