Thread: [\[TUT\] How To Setup DarkComet 5.2, No-IP, & Port Forward \[TUT\]](#)

Jake Ekaj - April 26, 2012, 9:46 pm

1. Setting Up No-IP

Spoiler ([Click to View](#))

1. Go to <http://www.No-ip.com>

2. Create an account, confirm your account through your email, then log in. Click Add Host.

3. Now name your host whatever you want. For example I will name my host gtech.servegame.com. Just follow these settings and press Create Host.

[img]<http://img38.imageshack.us/img38/2449/90542533.jpg>[/img]

4. Now go here - <https://www.no-ip.com/downloads.php> and download No-IP's Dynamic DNS Update Client if you haven't already.

5. Once downloaded, install it. Then open it up and put in your account email and password.

6. Click Select Hosts - Click the box to check mark your host - Then press Save.

It should look something like this:

[img]<http://img19.imageshack.us/img19/6208/84964790.jpg>[/img]

7. Click the X in the top right corner to minimize No-IP to your taskbar.

You are now finished setting up No-IP!

2. Setting Up DarkComet 5.2

Spoiler ([Click to View](#))

1. Download DarkComet 5.2 and open it. You can download DarkComet 5.2 from their official website here - http://www.darkcomet-rat.com/process_download.php?id=9

2. Now click DarkComet-RAT at the top left - Then "Listen to new port (+Listen)" and do the following:

[IMG]<http://img838.imageshack.us/img838/1682/85934444.jpg>[/IMG]

3. Click DarkComet-RAT - Client settings then do the following

[img]<http://img41.imageshack.us/img41/627/17811201.jpg>[/img]

You are now done with setting up DarkComet!

3. Building Your DarkComet Server

Spoiler ([Click to View](#))

1. Click DarkComet-RAT - Server Module - Full editor (Expert). Do the following:

[img]http://img193.imageshack.us/img193/4481/98875653.jpg[/img]

2. Click Network Settings. Put your No-IP DNS under IP/DNS and put 3080 under Port then click ADD.

[img]http://img94.imageshack.us/img94/813/69245229.jpg[/img]

3. I'm guessing most of you will be using a crypter. So skip Module Startup and make sure to enable startup and injection in your crypter when crypting.

ONLY if your not using a crypter do the following...

3. A. Go back to Main Settings and check Active FWB (Firewall bypass).

3. B. Go to Module Startup and do the following:

[img]http://img267.imageshack.us/img267/5893/63106734.jpg[/img]

3. C. Continue on with the tutorial.

4. Skip Install Message, Module Shield, Keylogger, Hosts Files, Add Plugins, File Binder, and Choose Icon. These are already set up correctly.

5. Click Stub Finalization. Check save the profile when stub successfully generated. Then click Build The Stub. Save the server as anything you'd like.

You are now done creating you server!

4. Forwarding Your Ports, If You Have Not Done So

Spoiler ([Click to View](#))

Your now going to have to forward port 82 on your router if you have not done so, this is how:

1. Click Start on your computer and click Run. If you have Vista/Windows 7 click start and click in the search bar.

2. Type cmd and hit enter.

3. type ipconfig and press enter.

4. You should see something like this, write down or remember these last digits that I selected in the picture below:

[img]http://img341.imageshack.us/img341/2904/newa.jpg[/img]

5. Now go to www.portforward.com

6. Scroll down and select your router.

7. Scroll down and you should see a bunch of programs, click "1st SMTP Server" or any program, it doesn't really matter.

8. You should see at the top telling you to enter your static IP

[img]http://img444.imageshack.us/img444/5174/newzi.jpg[/img]

9. Type in the digits I had you remember in step 4. My digits were 114 so I entered that.
10. Now just follow the tutorial, but when it says forward port 25, forward port 3080 instead.
11. Once you are done, go to www.canyouseeme.org
12. Type in 3080 in the box next to "What Port?" and click check.
13. If you got "Error: I could not see your service on IP ADDRESS HERE on port (3080) Reason: Connection refused" Make sure your firewall is off and try again.
14. You should get "Success: I can see your service on ADDRESS HERE on port (3080) Your ISP is not blocking port 3080"

Port 3080 should now be open!

You are now done with everything, have fun using DarkComet!

Hope you liked this tutorial, took a lot of time making it. Please Say Thanks!
Thanks, Jake Ekaj!

Fluxity - April 26, 2012, 10:52 pm

Nice, simple and neat. Thanks for the post. Gl to those attempting to set this up!

Thanks,
Chippysz

Stev - April 27, 2012, 2:20 am

Good tutorial you made there, this will help a lot of people out.

Only one small note: Do you think HDD#\ is a good path to drop your file in? I think when you do this, your file will activate UAC (User Account Control). This means that when slave reboots computer, he will be asked to run this file (yes/no). So this may be tricky.

vodkaaa - April 27, 2012, 10:35 am

can you help me when i try and test the pot at set 12 and it says this instead Error: I could not see your service on *.* on port (3080)
Reason: Connection timed out

Jake Ekaj - April 27, 2012, 4:57 pm

I don't think this will happen/be a problem. If you do come across this let me know. But like I said I don't think this will happen.

Make sure you followed the instructions to a T and make sure your firewall is off. Have darkcomet on and listening to the port while you test it.

Cosmo??? - April 27, 2012, 4:58 pm

Good tut, HQ, and simple layout.
10/10, stay HQ OP.

Appreciate it, hope this helps some more people.

Verts - April 28, 2012, 1:08 pm

Kohsti is correct. Sometimes this will activate the UAC ad the user will be prompted to approve the application.

Jake Ekaj - April 28, 2012, 1:12 pm

Hmm when I get a chance I'll fix that part then. But for the most part I'm pretty sure most people will be crypting their server so that part isn't even needed anyway.

captivemind9 - May 12, 2012, 7:18 am

Finally got this working! Great tut man, thanks for all the help.

Interlude24 - May 12, 2012, 7:33 am

This tut is the best i've seen in a while good job sir..

ricolimo12 - May 12, 2012, 7:51 am

Great tutorial! Clean, easy and noob friendly! I think this may help me on my problem! Thanks!

yesyoa - May 12, 2012, 8:27 am

hi all. i have a problem! i have opened my port 1337 .. and my firewall is off! but when i click on my server it dont conect to my dark comet client.. i tried it with a few computers but nothing happens! the only thing i can see is in my darkcomet client under "SOCKET/NET" the local ips and the remote ips.. but nothing under "USERS" ! PLEASE HELP ME :/

mouradbenazouz97 - May 13, 2012, 1:22 am

thank you Jake Ekaj

Tutorials for DarkComet of 5.2, No-IP, Port Forward &

skunkiller - May 13, 2012, 5:29 am

thanks for the tutorial darkcomet,it's easy

Jake Ekaj - May 20, 2012, 2:21 am

Glad this tutorial is helping people out!

Hirsch4 - May 20, 2012, 5:35 am

Thanks for that TUT great work bro...

Jake Ekaj - May 22, 2012, 1:36 am

but mping this up, hopefully more people can see this.

iHitek - May 22, 2012, 4:23 am

I followed Jake's tutorial and believe I did everything correctly but when I test the server on Sandboxie it gives me the following:

Could not invoke program: "File Directory" System Error Code: %1 is not a valid Win32 application.(193)

How can I fix this?

Jake Ekaj - May 23, 2012, 5:22 am

Are you using a crypter? If so there's a good chance that it has anti's.

Red™ - May 25, 2012, 10:46 pm

I am still having problems port-forwarding, I followed the tutorial on portforward.com but I still get I could not see your service.

Please help me

Team Plazma - May 26, 2012, 4:28 am

if you need help i may help you :D just hit me up with a pm Great with portfowarding! Crypting + FREE!

AwLeeh - May 29, 2012, 1:05 pm

I too am still having problems port forwarding. When I go to the site and select my router and click one of the programs in the list I see no box to forward my port in. All help appreciated.

PingByte1337 - July 20, 2012, 11:47 am

Anybody Downloadlink for 5.3.1 plz
Thanks in advanced

Fraco - July 20, 2012, 1:43 pm

Good!!!???
Thanks!

MyTigBits - July 21, 2012, 10:39 am

very helpful thanks for the post keep up the good work

Quizaw - July 21, 2012, 10:51 am

finnalyy! working perfect! :) thanks alot.

Killer12972 - July 30, 2012, 3:18 pm

Finally got Dark Comet working, Great tut, this helped me a lot.

DarkSerenity - August 7, 2012, 10:42 pm

Somehow the dark comet link is blocked for my country ;x can you upload it on a different site please :P , Thanks in advance

Assailant - August 8, 2012, 4:10 am

im not even going to bother...

seems so hard lol ;)

piebraa - August 8, 2012, 6:30 am

Anybody got the download link? As the link isn't working for me :(.
Thanks in advance.

????? - August 8, 2012, 7:07 am

great tutorial mate..Thanks for all the help:)

XeJesse - August 8, 2012, 7:09 am

Looks like an insane DDOSER wish I knew how to use them :P

Rulio739 - August 8, 2012, 1:28 pm

Great tutorial! Clean, easy and noob friendly! I think this may help me on my problem! Thanks!

Zuelanda - August 8, 2012, 1:51 pm

Noob question!

Can anyone give me a description of what DarkComet is/does?

Greatly appreciated!
