Thread: [How do i start thread with option strict?](#)

Moen - April 29, 2012, 2:56 pm

I am trying to code with "option strict" = on
this code is working with "option strict" = off

So what did i miss to make it possible for option strict?

Error message:

Code Error 1 Overload resolution failed because no accessible 'New' can be called with these arguments:

'Public Sub New(start As System.Threading.ParameterizedThreadStart)': Option Strict On does not allow narrowing in implicit type conversions between method 'Private Sub mysub(ms As Integer)' and delegate 'Delegate Sub ParameterizedThreadStart(obj As Object)'.

'Public Sub New(start As System.Threading.ThreadStart)': Method 'Private Sub mysub(ms As Integer)' does not have a signature compatible with delegate 'Delegate Sub ThreadStart()'. C:\Users***\AppData\Local\Temporary Projects\WindowsApplication1\Form1.vb 5 13 WindowsApplication1

Try this code:

```
Dim th as new threading.thread(new ParameterizedThreadStart(addressof mysub))
```

Perplexity - April 29, 2012, 3:12 pm

```
Code Dim th As New Threading.Thread(New Threading.ThreadStart(Sub() mysub(delay)))  
th.Start()
```

ident - April 29, 2012, 3:12 pm

You are parsing data to a entry thread method.

```
Code Dim delay As Integer = 5000
```

```
Dim th As New Threading.Thread(DirectCast(Sub() MySub(delay), Threading.ThreadStart))
```

```
With th
```

```
    .IsBackground = True
```

```
    .Start()
```

```
End With
```

th.Start()

Thanks for the replies

Will be using Perplexity's code
