Thread: [\[TUTORIAL:\]?_After Symlinking What Should I DO ?_ \[Noob friendly\]](#)

HeXagone - April 29, 2012, 4:58 pm

Hello HF.

I'm really disappointed to see a lack of tutorial these days, and on the other hand a group of noobs enthusiasm to unnecessary subjects. It drives me today to put this simple tutorial that shows the second phase of symlinking. In short pass to serious things.

TUTORIAL :

1/ It does not bother to repeat the steps to symlink I'll just give you links to some tutorials ? :

Quote:<https://hackforums.net/showthread.php?tid=2408125>
<https://hackforums.net/showthread.php?tid=2395936> Credits : BeggFoMercy
m0bil3_xT

2/ Having succeeded in doing all the steps. You will be able to proceed to the next step :
Defacing .

When symlinking you'll face on of those CMS :

- Joomla
- Wordpress
- Vbulletin
- PHPBB
- WHMCS
- and more

[img]http://img444.imageshack.us/img444/9417/98430935.jpg[/img]

--

Defacing JOOMLA :

1/ Open the txt file and search for the Databse name, username, and password :

[img]http://img710.imageshack.us/img710/4043/98005309.jpg[/img]

2/ Open your Mysql interface and fill with the appropriate data the connect :
Search for the jos_users and click Data.

[img]http://img15.imageshack.us/img15/9942/33281563.jpg[/img]

3/ Look for A "Super Administrator" Then click edit and change his password
with your own :

Note: You need to use MD5 hash

4/ Follow this tut to deface the website :

Quote:<https://hackforums.net/showthread.php?tid=2319021>
<https://hackforums.net/showthread.php?tid=2417535>

?? ? x O r ?

--

Defacing wordpress :

1/ Open the txt file and search for the Databse name, username, and password :

[img]http://img204.imageshack.us/img204/2757/26700807.jpg[/img]

2/ Open your Mysql interface and fill with the appropriate data the connect :
Search for the wp_users and click Data.

[img]http://img10.imageshack.us/img10/9554/58128723.jpg[/img]

3/ Look for Admin user Then click edit and change his password
with your own :

Note: You need to use wordpress hash or md5

4/ Follow this tut to deface the website :

Quote:<https://hackforums.net/showthread.php?tid=2312449> Credits : m0bil3_xT

--

Defacing Vbulletin :

1/ Open the txt file and search for the Databse name, username, and password :

[img]http://img831.imageshack.us/img831/4136/20578002.png[/img]

2/ Open your Mysql interface and fill with the appropriate data the connect :
Search for the users and click Data.

[img]http://img213.imageshack.us/img213/9743/81554041.png[/img]

3/ This is may take a little time but its ok !

Register in the forum using what ever information you want.
Then use Go to the databse and change your role ! Then you'll have all the privilege :)

3/ Follow this tut to deface the website :

--

Defacing PHPBB :

1/ Open the txt file and search for the Databse name, username, and password :

[img]<http://img834.imageshack.us/img834/9601/47866266.jpg>[/img]

2/ Open your Mysql interface and fill with the appropriate data the connect :
Search for the users and click Data.

[img]<http://img840.imageshack.us/img840/4708/68972968.png>[/img]

3/ Change the admin password and login:

4/ Follow this tut to deface the website :

--

Last The WHMCS :

Regarding WHMCS, I'll explain how to exploit it.

Instead of defacing it and lose some good information ! Better use this little script that
allow you to have more !

All you have to do is copy the data logins in the txt file
and put them in the right case :

Quote:db_host :

db_username:

db_password:

db_name :

cc_encryption_hash:

This script is named : WHMCS KILLER "Coded by RAB3OUN".

Spoiler ([Click to View](#)) [img]<http://img580.imageshack.us/img580/5426/wh1pz.jpg>[/img]

--

| Features : |

| |

| |

| Host r00ts |

| Domains Resellers |

| Clients r00ts |

| Clients Hosting Accounts |

```
|Clients CC      |
|Clients Tickets|
|FTP and SMTP password|
|Tools         |
|SQL Query      |
|Show clients   |
|BackUp         |
|Eval PHP       |
|_|_|
--
```

This script is simple to use and give you the possibility to connect to a Cpanel, Webhoster and more
....

I hope you enjoyed my tutorial, thank you for reading.

BeggFoMercy - April 29, 2012, 5:05 pm

Thats really awesome dude , Nice writtin tutorial :)

joomlafkr - April 29, 2012, 5:08 pm

Finally you made it !

Good to see a tutorial of yours :p , and yeah HF is lacking of new tutorials...

i just wanna add that they could make something more interesting than defacing those symlinked portals !

and maybe if they find the whmcs in the /root/public_html they could do magic things with it !

Phizo - April 29, 2012, 5:39 pm

Nice tutorial, keep up the good work.

Hooded Robin - April 29, 2012, 8:31 pm

This is like a mini-mega thread with a tutorial wrapped inside. Love it man!

HAMM01 - April 29, 2012, 10:27 pm

nice tutorial.. .. But use special color combinations that r easily readable.. :)

Professional Hacker - April 29, 2012, 11:01 pm

Haha, there is a simple script to change WP, Joomla whatever, admin pass.

All this is so much work ^^

HeXagone - April 30, 2012, 12:11 am

thanks for the positive feedbacks guys

HeXagone

Mx. - April 30, 2012, 1:07 am

Well done there, great explanation of what you did, gave the right credits to everyone, really input your time.

The Ion - April 30, 2012, 4:27 am

really good dude i was thinking of doing it but you did it Keep it up

Sw1x - April 30, 2012, 4:36 am

Nice tutorial, keep it up, this is helpful!

HeXagone - April 30, 2012, 6:33 am

thank hope you find this tut useful

Kiev - April 30, 2012, 1:57 pm

Thank you very much, you've just allowed me to get access to 4 Webmin accounts. :D!

inurl - April 30, 2012, 2:03 pm

thx a lor man , now just need to make it work :)

Thx

Error667 - April 30, 2012, 2:12 pm

Wondering why i didn't +rep you before. Nice release, check your greens.

TheNeutron - April 30, 2012, 2:14 pm

Love ya mate! Love ya! Cheers for HexaGone! One of the coolest guy around.. ^^

mObile - April 30, 2012, 3:56 pm

Nice tutorial bro! I like the way you've explained the process with screenshots! VERY well put together, and thanks for the shout out <3

jg0d - April 30, 2012, 7:38 pm

Nice tutorial might come in handy later on.

HeXagone - May 1, 2012, 2:20 am

Thanks you guys ! glad to do anything to help the community

einbrettholz - May 1, 2012, 3:14 am

sweet! very comprehensive.. will try this on my homeserver for funnzies.

HeXagone - May 2, 2012, 7:24 am

noober1001 - May 2, 2012, 10:06 am

Thank you so much for sharing this.

I liked whcms part specially.

Thanks again.

HeXagone - May 3, 2012, 8:22 am

No problem mate hope you enjoy the reading

Th3PonyWizard - May 3, 2012, 8:36 am

Question. Is symliking possible on Windows based boxes?

joomlafkr - May 3, 2012, 8:40 am

Response : Yep it is possible with one command :) , but it's not very common since if you can symlink in windows it means that you can run cmd commands==>you can escalate privileges and be the admin !

HeXagone - June 4, 2012, 3:23 pm

Hope that will help you HF Members :p

kabir_crack - June 5, 2012, 4:17 am

GREAT TUTORIAL DUDE.. EXCELLENT JOB..

The Decoder - June 5, 2012, 4:22 am

Nice tut buddy...

But syrian shell allow to deface these sites by config file..

So m recomnding to use syrian shell

djmayur - June 5, 2012, 12:51 pm

Nice tutorial, Keep up the good work Bro..Noob friendly thread .

HeXagone - September 22, 2012, 4:49 am

Don't lke to see this thread dead :p

Hope it will be useful to HF members

R3DH4nD - November 21, 2012, 5:49 am

this is really a very helpfull tutorial..

thanks for this.

Fares - November 21, 2012, 6:01 am

Thanks you, your tutorial is very good

12345xmen - November 21, 2012, 6:16 am

what is user and pass name in whmc killer script ?

i change both hash but not wrk dnt knw why !
