Thread: [How to add shells to a booter?](#)

**IVIATTY** - May 7, 2012, 2:15 pm

So I have loads of shells my friend gave me because he's going away. I just don't know what to do with them. I want to create my own booter something like jays booter when I can just put the victims ip and then boot them. Can anyone help me?

This is for booting someone off xbox live.

Google tyler777 booted source. Or donate in exchange for an accoun with unlimited boot time.

Or, sell the shells, download Dirt Jumper v4 and buy installs. Dirt jumper can boot this site off with 75 connections.

Shells are old school, threads is new.

is this a shell?

(a random ip address)/webdav/shell.php

Also if I use tylerr777 booter source can I keep the shells private and use it for how long I want to.

To add shells, first you need to get shells. Either by buying them or exploiting servers then you can put your script on them, next all you do is add the link to the booters shell list.

Well first make sure those shells that your friend gave you are private dedicated shells.

Booters are no longer allowed to be talked about on HF,

U just replied to a thread that didn't got any response since 2012,

I kindly ask you to leave this thread, Thanks!
