Thread: [Upcoming Formgrabber \[C++\] {IE/FF/Chrome}{HTTP/HTTPS} {Opera/Safari}{HTTP}](#)

pr0t0typ3 - May 13, 2012, 4:32 am

Hey guys

Over the last view days and weeks I've been working on a formgrabber.

Current features are:Coded in C++ without external dependencies

Full PE-Injection (No DLLs)

No byte-pattern scanning for API hooks (Formgrabber works for all versions of every browser mentioned)

Proper API hooking (the formgrabber does only hook functions directly related to the networking of the browser itself instead of hooking routines like RtlFreeHeap (like SpyEye does))

No hardcoded URLs (Unlimited URLs and form fields can be specified)

Grabs HTTP/HTTPS Requests on IE

Grabs HTTP/HTTPS Requests on FF

Grabs HTTP/HTTPS Requests on Chrome

Grabs HTTP Requests on Opera

Grabs HTTP Requests on Safari

Registry Persistence

I'm currently looking for suggestions what to add while I have a experienced web developer create the panel.

For people who don't belive me about the Chrome SSL Grabber:

Spoiler [\(Click to View\)](#)

+Awesome - May 13, 2012, 4:35 am

Holy nice features you got there. Awesome.

HMU if you need any help with graphics, panel design etc. ;)

Cheers.

pr0t0typ3 - May 13, 2012, 12:34 pm

Thank you for the offer, but as I don't have any startup funds, I need to find an investor or something.

I'm also not sure how much to charge per copy yet. I guess around 75 - 100 \$

DMC4 - May 13, 2012, 12:36 pm

Does this support web injects?

I will be interested, if it has similar characteristics to zeus.

arigato - May 13, 2012, 1:02 pm

What is with the influx of FormGrabbers..

Rebel FormGrabber
MP FormGrabber
nLoader bot w/ FormGrabber

And now this...

POR QUE?!

Pinch - May 13, 2012, 1:02 pm

Looks pretty good. If price isn't too high I might actually buy this.

Rebel FormGrabber
MP FormGrabber
nLoader bot w/ FormGrabber

And now this...

POR QUE?!IE and FF Formgrabber sources are public. Therefor buying these is a huge waste of money. Instead, I did create a properly working Chrome Grabber (with SSL) support which is not available in any other project (exactly like Safari).

(May 13, 2012 12:36 PM)DMC4 Wrote: [\[CITE\]](#) Does this support web injects?

I will be interested, if it has similar characteristics to zeus.No, it is a formgrabber and no crimeware pack. Webinjects are possible using the same technique but I did not implement it into this formgrabber.

(May 13, 2012 01:02 PM)Psychic Wrote: [\[CITE\]](#) Looks pretty good. If price isn't too high I might actually buy this.Thank you, I hope I will find a fair price.

pr0t0typ3 - May 13, 2012, 2:18 pm

(May 13, 2012 02:13 PM)Element Products Wrote: [\[CITE\]](#) :D, btw do you use NtReadFile for chrome?

Nah, I have a method to find the address of PR_Write without any byte pattern scanning (hint: there actually is a table inside the process memory which stores the absolute addresses of each PR_xxxx function which is easy to find if you know how ;)) Therefore I hook PR_Write in every version of chrome ;)

CarrotMilk - May 13, 2012, 2:23 pm

I wonder who the experienced web designer is ?

Gone With The Wind - May 13, 2012, 2:24 pm

(May 13, 2012 02:18 PM)pr0t0typ3 Wrote: [\[CITE\]](#) Nah, I have a method to find the address of PR_Write without any byte pattern scanning (hint: there actually is a table inside the process memory which stores the absolute addresses of each PR_xxxx function which is easy to find if you know how ;)) Therefore I hook PR_Write in every version of chrome ;)

Yeah I've known some people to use that methods but I personally went for NtReadFile as I can then use my hooking method that I use for ntdll based hooks. Only thing is PR_Write hook will be way more efficient and faster because it isn't just HTTP requests in NtReadFile buffer, it literally transfers gigabytes of crap.

pr0t0typ3 - May 13, 2012, 2:36 pm

(May 13, 2012 02:24 PM)Element Products Wrote: [\[CITE\]](#) Yeah I've known some people to use that methods but I personally went for NtReadFile as I can then use my hooking method that I use for ntdll based hooks. My focus was speed as well as bin size and as the Chrome PR_Write is pretty much the same as the FF one I can reduce the size :)

Gone With The Wind - May 13, 2012, 3:16 pm

(May 13, 2012 02:36 PM)pr0t0typ3 Wrote: [\[CITE\]](#) My focus was speed as well as bin size and as the Chrome PR_Write is pretty much the same as the FF one I can reduce the size :)

Yeah i was going to say, you could use 1 log routine for both.

pr0t0typ3 - May 13, 2012, 10:03 pm

Still looking for suggestions what to add and an estimate on what you would spend on a formgrabber (this is just secondary so this thread is still in the right section)

Hunter S Thompson - May 13, 2012, 10:10 pm

Are you hooking via 0xE9, because if so it's simple to remove :/

Any maybe \$100 MAX, since most formgrabbers on here are complete shit, or jump the fence within a month.

UnNamedHacker - May 13, 2012, 10:35 pm

So when will you be selling this ?
is this even working with all the latest versions of the Browsers ?
and just a quick suggestion

Can you do it like SpyEye. Well in spyeye whenever the user enters a site and his login information spyeye grabs it.

unlike the formgrabbers here they grab the sites that are listed such as facebook.com/twitter and that sh!t.

i want a formgrabber that grabs sites/login information that the user has entered. not the sites that we entered or put in a list.

Gone With The Wind - May 13, 2012, 10:40 pm

(May 13, 2012 10:10 PM)Hunter S Thompson Wrote: [\[CITE\]](#) Are you hooking via 0xE9, because if so it's simple to remove :/

Probably found the super pro l33t heck0r files over at OSC, then found out how to hook and such.

I didn't even know pr0t0 knew how to code C++.

Gone With The Wind - May 13, 2012, 11:08 pm

(May 13, 2012 11:07 PM)Hunter S Thompson Wrote: [\[CITE\]](#) Sigh, sometimes I loath discussing

anything with you.

The point is you don't know anything about the correct API. What you fail to realize is things like VirtualProtect, ReadFile, WriteFile all call their Nt Equivalent.

Hunter S Thompson - May 13, 2012, 11:10 pm

(May 13, 2012 11:08 PM)Element Products Wrote: [\[CITE\]](#) The point is you don't know anything about the correct API. What you fail to realize is things like VirtualProtect, ReadFile, WriteFile all call their Nt Equivalent.

Which is why I don't call VirtualProtect, ReadFile, or WriteFile. Nor do I call any NTQuery API's.

Gone With The Wind - May 13, 2012, 11:18 pm

(May 13, 2012 11:10 PM)Hunter S Thompson Wrote: [\[CITE\]](#) Which is why I don't call VirtualProtect, ReadFile, or WriteFile. Nor do I call any NTQuery API's.

Lets just get this straight, practically all functions end up at Ntdll, unless you've written your own functions (you're not capable) you can easily be screwed over.

There's no way you've come up with a fool proof hook restoration method on your own when like last week you didn't even understand how a hook worked.

Unless you're going to explain your elite bulletproof method you can stop trying to pretend you're better than everyone in their C++ program thread when you code C#.

Hunter S Thompson - May 13, 2012, 11:41 pm

I could always call NtProtectVirtualMemory.

Gone With The Wind - May 13, 2012, 11:42 pm

PM me what you have to offer + how much you'll need.

The Ethical Hacker - May 15, 2012, 6:29 am

Unless I'm wrong this is a SNIFFER not a form grabber. HTTPS makes no difference if you grab the data before it even gets that far.

Please do correct me on this.

▣ **Nick™** ▣ - May 15, 2012, 6:37 am

Hmm. Seems legit, and going over the posts in this thread, you seem to know what you're talking about. You've gotten my vouch OP, don't ruin it. Nice formgrabber. And as for the price, if everything is working like you say, this is well worth more than \$100.

pr0t0typ3 - May 15, 2012, 6:39 am

(May 15, 2012 06:29 AM)The Ethical Hacker Wrote: [\[CITE\]](#) Unless I'm wrong this is a SNIFFER not a form grabber. HTTPS makes no difference if you grab the data before it even gets that far.

Please do correct me on this. It is a formgrabber but to make things clearer for you : Most Browsers use different function for sending unencrypted (HTTP) as well as encrypted (HTTPS) traffic. In many cases the networking functions for the unencrypted traffic are winsock functions like WSASend. These are easy to find and hook, therefore most formgrabber support grabbing unencrypted request. The challenge is finding the function the browser uses to write to a SSL Socket (for the encrypted traffic), hook it and grab the data before it is sent. So this application can be considered a formgrabber as it grabs unencrypted as well as "encrypted" traffic before it is actually sent over the socket as it hooks the networking functions for unencrypted as well as encrypted transmissions.

(Sep 10, 2012 07:35 PM)Cunningham Wrote: [\[CITE\]](#) Exactly in everyone im asking for something to be coded or asking for a theme to be made or asking for suggestions. I dont code. I pay for people to code the programs for me, they just happen to be .NET.

Brah, do you need some ice for that burn, because you seem very upset that you cannot code for shit.

Damn, I don't know whats worse. The part that you are an extreme failure at coding, or the fact that you fail so much you have to pay others to code for you.

What's the present status?

Is it already for sale?

let us know

Jose"the real 1" - October 11, 2012, 12:04 pm

sure it's the best Formgrabber on the Market , Good Luck, i'm sure you don't need it!!! (mrlips)

pr0t0typ3 - November 22, 2012, 12:23 pm

The formgrabber has finally been released here
