Hello Hackforums,

Today i will be showing you guys how to enable your Windows Defender in a command prompt, When you never could enable it after having it shut down.
This tutorial is easy and requires QUICK CMD codes you have to fill in

Windows Defender

When you are trying to open your Windows Defender, You get this pop-up saying that your Windows Defender is shut down.

Now mostly if you are trying to click turn it back on it doesn't work.

[IMG]<http://screensnpr.com/e/au4db7.png>[/IMG]

Command Prompt

Now what you do is open your Command Prompt (CMD) As Administrator

[IMG]<http://www.tipandtrick.net/wp-content/uploads/2008/04/cmd-as-administrator.jpg>[/IMG]

Type the following command:

Code winmgmt /verifyrepositoryHit enter, the CMD will respond now back with the:
"WMI repository is not consistent" message.

For me it says "WMI repository is consistent" because my Firewall is already enabled.

[IMG]<http://screensnpr.com/e/VKQnUJ.png>[/IMG]

After you've seen the message: "WMI repository is not consistent"

You type the following command:

Code winmgmt /salvagerepositoryHit enter, the CMD will respond now with "WMI repository is consistent"

[IMG]<http://screensnpr.com/e/VKQnUJ.png>[/IMG]

Restart your computer, and your Windows Defender should be enabled.

Hope i helped you guys out with this quick and easy tutorial.

A very helpful tutorial, I never knew this before and my Windows Defender is always off. Sometimes I want it back on, but then I get that message, now I know how to fix it.
Thanks a lot Skiezo.

Try to type in Command prompt,

Other then that what location folder is it in?

Nice tutorial, this should come in handy.

Skiezo™ - May 15, 2012, 9:27 am

Thanks for the awesome feedback, means alot to me.

Verts - May 15, 2012, 9:31 am

Skiezo ? Hats off to you my friend. Awesome work.

DLT. - May 15, 2012, 11:16 am

Awesome Work Buddy. Keep it up ?

Skiezo™ - May 24, 2012, 2:08 am

Once again, Thanks for the awesome feedback guys!
